This function reserves an area within the virtual address space managed by the region map. There are two kinds of areas available:

- Reserved areas (*flags* = [L4Re::Rm::F::Reserved](#)), where no data spaces can be attached
- Special purpose areas (*flags* = 0), where data spaces can be attached to the area via the [L4Re::Rm::F::In_area](#) flag and a start address within the area itself.

Note

When searching for a free place in the virtual address space (with *flags* = [L4Re::Rm::F::Search_addr](#)), the space between *start* and the end of the virtual address space is searched.

Definition at line 280 of file [rm](#).

References [L4::Kobject_t< Rm, L4::Pager, L4RE_PROTO_RM, L4::Type_info::Demand_t< 1 > >::c\(\)](#), and [L4_PAGESHIFT](#).

Here is the call graph for this function:

16.301.3.12 reserve_area() [2/2]

```
template<typename T>
long L4Re::Rm::reserve_area (
    T ** start,
    unsigned long size,
    Flags flags = Flags(0),
    unsigned char align = L4_PAGESHIFT) const [inline], [noexcept]
```

Reserve the given area in the region map.

Parameters

<i>in, out</i>	<i>start</i>	The virtual start address of the area to reserve. Returns the start address of the area.
	<i>size</i>	The size of the area to reserve (in bytes).
	<i>flags</i>	Flags for the reserved area (see F::Region_flags and F::Attach_flags).
	<i>align</i>	Alignment of area if searched as bits (log2 value).

Return values

0	Success
-L4_EADDRNOTAVAIL	The given area cannot be reserved.
<0	IPC errors

For more information, please refer to the analogous function

Region flags (permissions, cacheability, special).

16.303.1 Detailed Description

[Rm](#) flags definitions.

Definition at line [108](#) of file [rm](#).

16.303.2 Member Enumeration Documentation

16.303.2.1 Attach_flags

```
enum L4Re::Rm::F::Attach_flags : l4_uint32_t
```

Flags for attach operation.

Enumerator

Search_addr	Search for a suitable address range.
In_area	Search only in area, or map into area.
Eager_map	Eagerly map the attached data space in.
No_eager_map	Prevent eager mapping of the attached data space.
Attach_mask	Mask of all attach flags.

Definition at line [111](#) of file [rm](#).

16.303.2.2 Region_flags

```
enum L4Re::Rm::F::Region_flags : l4_uint16_t
```

[Region](#) flags (permissions, cacheability, special).

Enumerator

Rights_mask	Region rights.
R	Readable region.
W	Writable region.
X	Executable region.
RW	Readable and writable region.
RX	Readable and executable region.
RWX	Readable, writable and executable region.
Kernel	Kernel-provided memory (KUMEM).
Detach_free	Free the portion of the data space after detach.
Pager	Region has a pager.
Reserved	Region is reserved (blocked).
Caching_mask	Mask of all Rm cache bits.
Cache_normal	Cache bits for normal cacheable memory. This is the default if no other cache-related flag was specified.
Cache_buffered	Cache bits for buffered (write combining) memory.
Cache_uncached	Cache bits for uncached memory.
Ds_map_mask	Mask for all bits for cache options and rights.
Region_flags_mask	Mask of all region flags.

Dereference the address.
- **T operator->** () const noexcept
Member access for the address.

16.305.1 Detailed Description

```
template<typename T>
class L4Re::Rm::Unique_region< T >
```

Unique region.

Capture a single region with automatic detach on destruction and unique ownership. Stores the start address and the region-mapper capability internally. A unique region is valid precisely if the internal region-mapper capability is valid. The features for unique ownership and automatic detach are only active for valid unique regions.

Definition at line [435](#) of file [rm](#).

16.305.2 Constructor & Destructor Documentation

16.305.2.1 Unique_region() [1/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
    T addr) [inline], [explicit], [noexcept]
```

Construct a [Unique_region](#) from an address.

No region manager is set.

Parameters

<i>addr</i>	The new address
-------------	-----------------

Definition at line [456](#) of file [rm](#).

16.305.2.2 Unique_region() [2/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
    T addr,
    L4::Cap< Rm > const & rm) [inline], [noexcept]
```

Construct a valid [Unique_region](#) from an address and a region manager.

Parameters

<i>addr</i>	The address
<i>rm</i>	The region manager

Definition at line 465 of file [rm](#).

16.305.2.3 Unique_region() [3/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
    Unique_region< T > && o) [inline], [noexcept]
```

Move-Construct a [Unique_region](#).

Parameters

<i>o</i>	L-value reference to other region.
----------	------------------------------------

Definition at line 473 of file [rm](#).

16.305.2.4 ~Unique_region()

```
template<typename T>
L4Re::Rm::Unique_region< T >::~~Unique_region () [inline], [noexcept]
```

Destructor.

If the region is valid, call [detach](#).

Definition at line 498 of file [rm](#).

**16.305.3.2 is_valid()**

```

template<typename T>
bool L4Re::Rm::Unique_region< T >::is_valid () const [inline], [noexcept]

```

Check if the [Unique_region](#) is valid.

Returns

true iff the [Unique_region](#) is valid

Definition at line 549 of file [rm](#).

16.305.3.3 operator=()

```

template<typename T>
Unique_region & L4Re::Rm::Unique_region< T >::operator= (
    Unique_region< T > && o) [inline], [noexcept]

```

Move-assign a [Unique_region](#).

Parameters

<i>o</i>	L-value reference to region to assign from
----------	--

Definition at line 481 of file [rm](#).

16.305.3.4 release()

```
template<typename T>
T L4Re::Rm::Unique_region< T >::release () [inline], [noexcept]
```

Return the address and invalidate the [Unique_region](#).

Returns

the address

Definition at line [517](#) of file [rm](#).

16.305.3.5 reset()

```
template<typename T>
void L4Re::Rm::Unique_region< T >::reset (
    T addr,
    L4::Cap< Rm > const & rm) [inline], [noexcept]
```

Set new address and region manager.

Parameters

<i>addr</i>	The new address
<i>rm</i>	The new region manager

Definition at line [529](#) of file [rm](#).

16.309 L4Re::Util::Bitmap< BITS > Class Template Reference

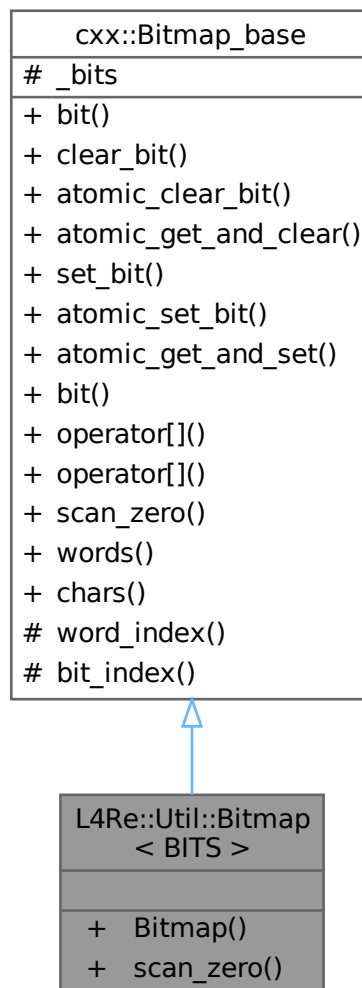

A static bitmap.

```
#include <bitmap>
```

Inheritance diagram for L4Re::Util::Bitmap< BITS >:

Collaboration diagram for L4Re::Util::Bitmap< BITS >:

Public Member Functions

- **Bitmap** () noexcept
Create a bitmap with `BITS` bits.
- long `scan_zero` (long start_bit=0) const noexcept
Scan for the first zero bit.

Public Member Functions inherited from `cxx::Bitmap_base`

- void `bit` (long bit, bool on) noexcept
Set the value of bit `bit` to on.
- void `clear_bit` (long bit) noexcept
Clear bit `bit`.

- void `atomic_clear_bit` (long `bit`) noexcept
Clear bit `bit` atomically.
- `word_type` `atomic_get_and_clear` (long `bit`) noexcept
Clear bit `bit` atomically and return old state.
- void `set_bit` (long `bit`) noexcept
Set bit `bit`.
- void `atomic_set_bit` (long `bit`) noexcept
Set bit `bit` atomically.
- `word_type` `atomic_get_and_set` (long `bit`) noexcept
Set bit `bit` atomically and return old state.
- `word_type` `bit` (long `bit`) const noexcept
Get the truth value of a bit.
- `word_type` `operator[]` (long `bit`) const noexcept
Get the bit at index `bit`.
- `Bit operator[]` (long `bit`) noexcept
Get the lvalue for the bit at index `bit`.
- long `scan_zero` (long `max_bit`, long `start_bit`=0) const noexcept
Scan for the first zero bit.

Additional Inherited Members

Static Public Member Functions inherited from `cxx::Bitmap_base`

- static long `words` (long bits) noexcept
Get the number of `Words` that are used for the bitmap.
- static long `chars` (long bits) noexcept
Get the number of chars that are used for the bitmap.

Protected Types inherited from `cxx::Bitmap_base`

- enum { `W_bits` = sizeof(word_type) * 8 , `C_bits` = 8 }
- typedef unsigned long `word_type`
Data type for each element of the bit buffer.

Static Protected Member Functions inherited from `cxx::Bitmap_base`

- static unsigned `word_index` (unsigned `bit`)
Get the word index for the given bit.
- static unsigned `bit_index` (unsigned `bit`)
Get the bit index within `word_type` for the given bit.

Protected Attributes inherited from `cxx::Bitmap_base`

- `word_type` * `_bits`
Pointer to the buffer storing the bits.

16.309.1 Detailed Description

```
template<int BITS>
class L4Re::Util::Bitmap< BITS >
```

A static bitmap.

Template Parameters

<i>BITS</i>	The number of bits that shall be in the bitmap.
-------------	---

Definition at line 220 of file [bitmap](#).

16.309.2 Member Function Documentation

16.309.2.1 scan_zero()

```
template<int BITS>
long cxx::Bitmap< BITS >::scan_zero (
    long start_bit = 0) const [inline], [noexcept]
```

Scan for the first zero bit.

Parameters

<i>start_bit</i>	Hint at the number of the first bit to look at. Zero bits below <i>start_bit</i> may or may not be taken into account by the implementation.
------------------	--

Return values

<i>>=</i>	0 Number of first zero bit found.
<i>-1</i>	All bits at <i>start_bit</i> or higher are set.

Compared to [Bitmap_base::scan_zero\(\)](#), the upper bound is set to BITS.

Definition at line 365 of file [bitmap](#).

Data Structures

- class [Bit](#)
A writable bit in a bitmap.
- class [Word](#)
Helper abstraction for a word contained in the bitmap.
- class [Char](#)
Helper abstraction for a byte contained in the bitmap.

Public Member Functions

- void [bit](#) (long bit, bool on) noexcept
Set the value of bit [bit](#) to on.
- [word_type](#) [bit](#) (long bit) const noexcept
Get the truth value of a bit.
- void [clear_bit](#) (long [bit](#)) noexcept
Clear bit [bit](#).
- void [atomic_clear_bit](#) (long [bit](#)) noexcept
Clear bit [bit](#) atomically.
- [word_type](#) [atomic_get_and_clear](#) (long [bit](#)) noexcept
Clear bit [bit](#) atomically and return old state.

- void `set_bit` (long `bit`) noexcept
Set bit `bit`.
- void `atomic_set_bit` (long `bit`) noexcept
Set bit `bit` atomically.
- `word_type atomic_get_and_set` (long `bit`) noexcept
Set bit `bit` atomically and return old state.
- `word_type operator[]` (long `bit`) const noexcept
Get the bit at index `bit`.
- `Bit operator[]` (long `bit`) noexcept
Get the lvalue for the bit at index `bit`.
- long `scan_zero` (long `max_bit`, long `start_bit=0`) const noexcept
Scan for the first zero bit.

Static Public Member Functions

- static long `words` (long bits) noexcept
Get the number of `Words` that are used for the bitmap.
- static long `chars` (long bits) noexcept
Get the number of chars that are used for the bitmap.

Protected Types

- enum { `W_bits` = sizeof(word_type) * 8 , `C_bits` = 8 }
- typedef unsigned long `word_type`
Data type for each element of the bit buffer.

Static Protected Member Functions

- static unsigned `word_index` (unsigned `bit`)
Get the word index for the given bit.
- static unsigned `bit_index` (unsigned `bit`)
Get the bit index within `word_type` for the given bit.

Protected Attributes

- `word_type * _bits`
Pointer to the buffer storing the bits.

16.310.1 Detailed Description

Basic bitmap abstraction.

This abstraction keeps a pointer to a memory area that is used as bitmap.

Definition at line 18 of file `bitmap`.

16.310.2 Member Enumeration Documentation

16.310.2.1 anonymous enum

```
anonymous enum [protected]
```

Enumerator

W_bits	number of bits in word_type
C_bits	number of bits in char

Definition at line 26 of file [bitmap](#).

16.310.3 Member Function Documentation

16.310.3.1 `atomic_clear_bit()`

```
void cxx::Bitmap_base::atomic_clear_bit (  
    long bit) [inline], [noexcept]
```

Clear bit [bit](#) atomically.

Use this function for multi-threaded access to the bitmap.

Parameters

<i>bit</i>	The number of the bit to clear.
------------	---------------------------------

Definition at line 269 of file [bitmap](#).

16.310.3.2 `atomic_get_and_clear()`

```
Bitmap_base::word_type cxx::Bitmap_base::atomic_get_and_clear (  
    long bit) [inline], [noexcept]
```

Clear bit [bit](#) atomically and return old state.

Use this function for multi-threaded access to the bitmap.

Parameters

<i>bit</i>	The number of the bit to clear.
------------	---------------------------------

Definition at line 279 of file [bitmap](#).

16.310.3.3 `atomic_get_and_set()`

```
Bitmap_base::word_type cxx::Bitmap_base::atomic_get_and_set (  
    long bit) [inline], [noexcept]
```

Set bit [bit](#) atomically and return old state.

Use this function for multi-threaded access to the bitmap.

Parameters

<i>bit</i>	The number of the bit to set.
------------	-------------------------------

Definition at line 308 of file [bitmap](#).

16.310.3.4 atomic_set_bit()

```
void cxx::Bitmap_base::atomic_set_bit (
    long bit) [inline], [noexcept]
```

Set bit [bit](#) atomically.

Use this function for multi-threaded access to the bitmap.

Parameters

<i>bit</i>	The number of the bit to set.
------------	-------------------------------

Definition at line 298 of file [bitmap](#).

16.310.3.5 bit() [1/2]

```
Bitmap_base::word_type cxx::Bitmap_base::bit (
    long bit) const [inline], [noexcept]
```

Get the truth value of a bit.

Parameters

<i>bit</i>	The number of the bit to read.
------------	--------------------------------

Return values

0	Bit is not set.
!= 0	0 Bit is set.

Definition at line 318 of file [bitmap](#).

16.310.3.6 bit() [2/2]

```
void cxx::Bitmap_base::bit (
    long bit,
    bool on) [inline], [noexcept]
```

Set the value of bit [bit](#) to on.

Parameters

<i>bit</i>	The number of the bit.
<i>on</i>	The boolean value that shall be assigned to the bit.

Definition at line 251 of file [bitmap](#).

16.310.3.7 bit_index()

```
unsigned cxx::Bitmap_base::bit_index (  
    unsigned bit) [inline], [static], [protected]
```

Get the bit index within [word_type](#) for the given bit.

Parameters

<i>bit</i>	The bit index in the bitmap.
------------	------------------------------

Returns

the bit index within [word_type](#) (bit % W_bits).

Definition at line 53 of file [bitmap](#).

16.310.3.8 clear_bit()

```
void cxx::Bitmap_base::clear_bit (  
    long bit) [inline], [noexcept]
```

Clear bit [bit](#).

Parameters

<i>bit</i>	The number of the bit to clear.
------------	---------------------------------

Definition at line 260 of file [bitmap](#).

16.310.3.9 operator[]() [1/2]

```
word\_type cxx::Bitmap_base::operator[] (  
    long bit) const [inline], [noexcept]
```

Get the bit at index [bit](#).

Parameters

<i>bit</i>	The number of the bit to read.
------------	--------------------------------

Return values

0	Bit is not set.
!= 0	Bit is set.

Definition at line 181 of file [bitmap](#).

16.310.3.10 operator[]() [2/2]

```
Bit cxx::Bitmap_base::operator[] (
    long bit) [inline], [noexcept]
```

Get the lvalue for the bit at index [bit](#).

Parameters

<i>bit</i>	The number.
------------	-------------

Returns

lvalue for [bit](#)

Definition at line 191 of file [bitmap](#).

16.310.3.11 scan_zero()

```
long cxx::Bitmap_base::scan_zero (
    long max_bit,
    long start_bit = 0) const [inline], [noexcept]
```

Scan for the first zero bit.

Parameters

<i>max_bit</i>	Upper bound (exclusive) for the scanning operation.
<i>start_bit</i>	Hint at the number of the first bit to look at. Zero bits below <i>start_bit</i> may or may not be taken into account by the implementation.

Return values

>=	0 Number of first zero bit found.
----	-----------------------------------

-1	All bits between <code>start_bit</code> and <code>max_bit</code> are set.
----	---

Definition at line 339 of file [bitmap](#).

16.310.3.12 `set_bit()`

```
void cxx::Bitmap_base::set_bit (  
    long bit) [inline], [noexcept]
```

Set bit [bit](#).

Parameters

<i>bit</i>	The number of the bit to set.
------------	-------------------------------

Definition at line 289 of file [bitmap](#).

16.310.3.13 `word_index()`

```
unsigned cxx::Bitmap_base::word_index (  
    unsigned bit) [inline], [static], [protected]
```

Get the word index for the given bit.

Parameters

<i>bit</i>	The index of the bit in question.
------------	-----------------------------------

Returns

the index in [Bitmap_base::_bits](#) for the given bit (bit / W_bits).

Definition at line 44 of file [bitmap](#).

Buffer-register (BR) manager for [L4::Server](#).

```
#include <br_manager>
```

Inheritance diagram for L4Re::Util::Br_manager:

Collaboration diagram for L4Re::Util::Br_manager:

Public Member Functions

- **Br_manager ()**
Make a buffer-register (BR) manager.
- int **alloc_buffer_demand** (**Demand** const &d) override
Tells the server to allocate buffers for the given demand.
- **L4::Cap**< void > **get_rcv_cap** (int i) const override
Get capability slot allocated to the given receive buffer.
- int **realloc_rcv_cap** (int i) override
Allocate a new capability for the given receive buffer.
- void **set_rcv_cap_flags** (unsigned long flags)
Set the receive flags for the buffers.
- int **add_timeout** (**L4::lpc_svr::Timeout** *, **l4_kernel_clock_t**) override
No timeouts handled by us.

- int **remove_timeout** ([L4::lpc_svr::Timeout](#) *) override
No timeouts handled by us.
- void **setup_wait** ([l4_utcb_t](#) *utcb, [L4::lpc_svr::Reply_mode](#))
setup_wait() used the server loop ([L4::Server](#))

Public Member Functions inherited from [L4::lpc_svr::Server_iface](#)

- **Server_iface** ()
Make a server interface.
- template<typename T>
[L4::Cap](#)< T > **rcv_cap** (int index) const
Get given receive buffer as typed capability.
- [L4::Cap](#)< void > **rcv_cap** (int index) const
Get receive cap with the given index as generic (void) type.

Protected Member Functions

- unsigned **first_free_br** () const
Used for assigning BRs for a timeout.

Additional Inherited Members

Public Types inherited from [L4::lpc_svr::Server_iface](#)

- typedef [L4::Type_info::Demand](#) **Demand**
Data type expressing server-side demand for receive buffers.

16.314.1 Detailed Description

Buffer-register (BR) manager for [L4::Server](#).

Implementation of the [L4::lpc_svr::Server_iface](#) API for managing the server-side receive buffers needed for a set of server objects running within a server.

Definition at line 25 of file [br_manager](#).

16.314.2 Member Function Documentation

16.314.2.1 **alloc_buffer_demand()**

```
int L4Re::Util::Br_manager::alloc_buffer_demand (
    Demand const & demand) [inline], [override], [virtual]
```

Tells the server to allocate buffers for the given demand.

Parameters

<i>demand</i>	The total server-side demand of receive buffers needed for a given interface, see Demand .
---------------	--

This function is not called by user applications directly. Usually the server implementation or the registry implementation calls this function whenever a new object is registered at the server.

Implements [L4::lpc_svr::Server_iface](#).

Definition at line 54 of file [br_manager](#).

References [L4::Cap_base::cap\(\)](#), [L4Re::Util::cap_alloc](#), [L4::Type_info::Demand::caps](#), [L4_EINVAL](#), [L4_ENOMEM](#), [L4_EOK](#), [L4_ERANGE](#), [L4::Type_info::Demand::mem](#), and [L4::Type_info::Demand::ports](#).

16.314.2.2 get_rcv_cap()

```
L4::Cap< void > L4Re::Util::Br_manager::get_rcv_cap (
    int index) const [inline], [override], [virtual]
```

Get capability slot allocated to the given receive buffer.

Parameters

<i>index</i>	The receive buffer index of the expected capability argument ($0 \leq \text{index} < \text{caps}$ registered with alloc_buffer_demand()).
--------------	---

Precondition

$0 \leq \text{index} < \text{caps}$ registered with [alloc_buffer_demand\(\)](#)

Returns

Capability slot currently allocated to the given receive buffer.

Implements [L4::lpc_svr::Server_iface](#).

Definition at line 86 of file [br_manager](#).

References [L4::Cap_base::Invalid](#), and [L4_CAP_MASK](#).

16.314.2.3 realloc_rcv_cap()

```
int L4Re::Util::Br_manager::realloc_rcv_cap (
    int index) [inline], [override], [virtual]
```

Allocate a new capability for the given receive buffer.

Parameters

<i>index</i>	The receive buffer index of the expected capability argument ($0 \leq \text{index} < \text{caps}$ registered with alloc_buffer_demand()).
--------------	---

Precondition

$0 \leq \text{index} < \text{caps}$ registered with [alloc_buffer_demand\(\)](#)

Returns

0 on success, < 0 on error.

Implements [L4::lpc_svr::Server_iface](#).

Definition at line 94 of file [br_manager](#).

References [L4::Cap_base::cap\(\)](#), [L4Re::Util::cap_alloc](#), [L4_EINVAL](#), [L4_ENOMEM](#), and [L4_EOK](#).

Here is the call graph for this function:

**16.314.2.4 set_rcv_cap_flags()**

```
void L4Re::Util::Br_manager::set_rcv_cap_flags (
    unsigned long flags) [inline]
```

Set the receive flags for the buffers.

Precondition

Must be called before any handlers are registered.

Parameters

<i>flags</i>	New receive capability flags, see l4_msg_item_consts_t .
--------------	--

Definition at line 118 of file [br_manager](#).

References [l4_assert](#).

```

Inheritance diagram for L4Re::Util::Br_manager_timeout_hooks:

Collaboration diagram for L4Re::Util::Br_manager_timeout_hooks:

Additional Inherited Members

Public Types inherited from L4::lpc_svr::Server_iface

- typedef L4::Type_info::Demand Demand
Data type expressing server-side demand for receive buffers.

Public Member Functions inherited from**L4::lpc_svr::Timeout_queue_hooks< Br_manager_timeout_hooks, Br_manager >**

- **l4_timeout_t** **timeout** ()
get the time for the next timeout
- void **setup_wait** (l4_utcb_t *utcb, L4::lpc_svr::Reply_mode mode)
setup_wait() for the server loop
- L4::lpc_svr::Reply_mode **before_reply** (l4_msgtag_t, l4_utcb_t *)
server loop hook
- int **add_timeout** (Timeout *timeout, l4_kernel_clock_t time) override
Add a timeout to the queue for time time.
- int **remove_timeout** (Timeout *timeout) override
Remove timeout from the queue.

Public Member Functions inherited from L4::lpc_svr::Server_iface

- **Server_iface** ()
Make a server interface.
- virtual int **alloc_buffer_demand** (Demand const &demand)=0
Tells the server to allocate buffers for the given demand.
- virtual L4::Cap< void > **get_rcv_cap** (int index) const =0
Get capability slot allocated to the given receive buffer.
- virtual int **realloc_rcv_cap** (int index)=0
Allocate a new capability for the given receive buffer.
- template<typename T>
L4::Cap< T > **rcv_cap** (int index) const
Get given receive buffer as typed capability.
- L4::Cap< void > **rcv_cap** (int index) const
Get receive cap with the given index as generic (void) type.

Data Fields inherited from**L4::lpc_svr::Timeout_queue_hooks< Br_manager_timeout_hooks, Br_manager >**

- **Timeout_queue** **queue**
Use this timeout queue.

16.316.1 Detailed Description

Predefined server-loop hooks for a server with using the [Br_manager](#) and a timeout queue.

This class can be used for server loops that need the full package of buffer-register management and a timeout queue.

Definition at line 179 of file [br_manager](#).

The documentation for this struct was generated from the following file:

void **free** ([L4::Cap](#)< T > const &cap, [l4_cap_idx_t](#) task=[L4_INVALID_CAP](#), [l4_umword_t](#) unmap_↵
flags=[L4_FP_ALL_SPACES](#)) noexcept
Free a capability slot.

16.317.1 Detailed Description

Capability allocator.

Definition at line 28 of file [bitmap_cap_alloc](#).

The documentation for this class was generated from the following file:

- [l4/re/util/bitmap_cap_alloc](#)

16.318 L4Re::Util::Counter< COUNTER > Struct Template Reference

[Counter](#) for [Counting_cap_alloc](#) with variable data width.

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counter< COUNTER >:

Public Member Functions

- bool [inc](#) ()
Increment counter if not yet saturated.
- Type [dec](#) ()
Decrement counter if not saturated.

16.318.1 Detailed Description

```
template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter< COUNTER >
```

[Counter](#) for [Counting_cap_alloc](#) with variable data width.

This version is not thread safe.

Definition at line 27 of file [counting_cap_alloc](#).

16.318.2 Member Function Documentation

16.318.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter< COUNTER >::dec () [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 67 of file [counting_cap_alloc](#).

16.318.2.2 inc()

```
template<typename COUNTER = unsigned char>  
bool L4Re::Util::Counter< COUNTER >::inc () [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Return values

<i>false</i>	The counter just went saturated after it was increased.
<i>true</i>	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 50 of file [counting_cap_alloc](#).

The documentation for this struct was generated from the following file:

- [l4/re/util/counting_cap_alloc](#)

16.319 L4Re::Util::Counter_atomic< COUNTER > Struct Template Reference

Thread safe version of counter for [Counting_cap_alloc](#).

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counter_atomic< COUNTER >:

Public Member Functions

- bool [inc](#) ()
Increment counter if not yet saturated.
- Type [dec](#) ()
Decrement counter if not saturated.

16.319.1 Detailed Description

```
template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter_atomic< COUNTER >
```

Thread safe version of counter for [Counting_cap_alloc](#).

Despite using atomic instructions, this version has to make sure that capability slots are not reused too early. If the last reference is gone, the capability slot has to be unmapped. The slot must only be allocated again when the unmap has completed. This is accomplished by starting with an initial count of 2. The last reference will decrease the counter to 1. Only then, after the slot was unmapped, will the counter be set to 0. This will allow other threads to reallocate the slot.

Definition at line 98 of file [counting_cap_alloc](#).

16.319.2 Member Function Documentation

16.319.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter_atomic< COUNTER >::dec () [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 142 of file [counting_cap_alloc](#).

16.319.2.2 inc()

```
template<typename COUNTER = unsigned char>
bool L4Re::Util::Counter_atomic< COUNTER >::inc () [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Return values

<i>false</i>	The counter just went saturated after it was increased.
<i>true</i>	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 121 of file [counting_cap_alloc](#).

16.320 L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg > Class Template Reference

Internal reference-counting cap allocator.

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >:

Public Member Functions

- `L4::Cap< void > alloc ()` noexcept
Allocate a new capability slot.
- `template<typename T>`
`L4::Cap< T > alloc ()` noexcept
Allocate a new capability slot.
- `void take (L4::Cap< void > cap)` noexcept
Increase the reference counter for the capability.
- `bool free (L4::Cap< void > cap, l4_cap_idx_t task=L4_INVALID_CAP, unsigned unmap_flags=L4_FP_ALL_SPACES)` noexcept
Free the capability.
- `bool release (L4::Cap< void > cap, l4_cap_idx_t task=L4_INVALID_CAP, unsigned unmap_flags=L4_FP_ALL_SPACES)` noexcept
Decrease the reference counter for a capability.
- `long last ()` noexcept
Return highest capability id managed by this allocator.

Protected Member Functions

- `Counting_cap_alloc ()` noexcept
Create a new, empty allocator.
- `void setup (void *m, long capacity, long bias, Dbg *dbg)` noexcept
Set up the backing memory for the allocator and the area of managed capability slots.

16.320.1 Detailed Description

```
template<typename COUNTERTYPE, typename Dbg>
class L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >
```

Internal reference-counting cap allocator.

This is intended for internal use only. [L4Re](#) applications should use [L4Re::Util::cap_alloc\(\)](#).

Allocator for capability slots that automatically frees the slot and optionally unmaps the capability when the reference count goes down to zero. Reference counting must be done manually via [take\(\)](#) and [release\(\)](#). The backing store for the reference counters must be provided in the [setup\(\)](#) method. The allocator can recognize capability slots that are not managed by itself and does nothing on such slots.

Note

The user must ensure that the backing store is zero-initialized.

The user must ensure that the capability slots managed by this allocator are not used by a different allocator, see [setup\(\)](#).

The operations in this class are not thread-safe.

Definition at line 191 of file [counting_cap_alloc](#).

16.320.2 Constructor & Destructor Documentation

16.320.2.1 Counting_cap_alloc()

```
template<typename COUNTERTYPE, typename Dbg>
L4Re::Util::Counting\_cap\_alloc< COUNTERTYPE, Dbg >::Counting_cap_alloc () [inline], [protected],
[noexcept]
```

Create a new, empty allocator.

Needs to be initialized with [setup\(\)](#) before it can be used.

Definition at line 224 of file [counting_cap_alloc](#).

16.320.3 Member Function Documentation

16.320.3.1 alloc() [1/2]

```
template<typename COUNTERTYPE, typename Dbg>
template<typename T>
L4::Cap< T > L4Re::Util::Counting\_cap\_alloc< COUNTERTYPE, Dbg >::alloc () [inline], [noexcept]
```

Allocate a new capability slot.

Returns

The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 282 of file [counting_cap_alloc](#).

References [alloc\(\)](#), and [L4::cap_cast\(\)](#).

Here is the call graph for this function:

**16.320.3.2 alloc() [2/2]**

```
template<typename COUNTERTYPE, typename Dbg>
L4::Cap< void > L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::alloc () [inline], [noexcept]
```

Allocate a new capability slot.

Returns

The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 257 of file [counting_cap_alloc](#).

References [L4::Cap_base::Invalid](#), and [L4_CAP_SHIFT](#).

Referenced by [alloc\(\)](#).

Here is the caller graph for this function:

16.320.3.3 free()

```
template<typename COUNTERTYPE, typename Dbg>
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::free (
    L4::Cap< void > cap,
    l4_cap_idx_t task = L4_INVALID_CAP,
    unsigned unmap_flags = L4_FP_ALL_SPACES) [inline], [noexcept]
```

Free the capability.

Parameters

<i>cap</i>	Capability to free.
<i>task</i>	If set, task to unmap the capability from.
<i>unmap_flags</i>	Flags for unmap, see l4_unmap_flags_t .

Precondition

The capability has been allocated. Calling free twice on a capability managed by this allocator results in undefined behaviour.

Returns

True, if the capability was managed by this allocator.

Definition at line 321 of file [counting_cap_alloc](#).

References [l4_assert](#), [L4_FP_ALL_SPACES](#), [L4_INVALID_CAP](#), [l4_is_valid_cap\(\)](#), and [l4_task_unmap\(\)](#).

Here is the call graph for this function:

16.320.3.4 release()

```
template<typename COUNTERTYPE, typename Dbg>
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::release (
    L4::Cap< void > cap,
    l4_cap_idx_t task = L4_INVALID_CAP,
    unsigned unmap_flags = L4_FP_ALL_SPACES) [inline], [noexcept]
```

Decrease the reference counter for a capability.

Parameters

<i>cap</i>	Capability to release.
<i>task</i>	If set, task to unmap the capability from.
<i>unmap_flags</i>	Flags for unmap, see l4_unmap_flags_t .

Precondition

The capability has been allocated. Calling release on a free capability results in undefined behaviour.

Returns

True, if the capability was freed as a result of this operation. If false is returned the capability is either still in use or is not managed by this allocator.

Does nothing apart from returning false if the capability is not managed by this allocator.

Definition at line 359 of file [counting_cap_alloc](#).

References [l4_assert](#), [L4_FP_ALL_SPACES](#), [L4_INVALID_CAP](#), and [l4_task_unmap\(\)](#).

Here is the call graph for this function:

**16.320.3.5 setup()**

```

template<typename COUNTERTYPE, typename Dbg>
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::setup (
    void * m,
    long capacity,
    long bias,
    Dbg * dbg) [inline], [protected], [noexcept]
  
```

Set up the backing memory for the allocator and the area of managed capability slots.

Parameters

<i>m</i>	Pointer to backing memory.
<i>capacity</i>	Number of capabilities that can be stored.
<i>bias</i>	First capability id to use by this allocator.
<i>dbg</i>	Logger for warnings if counter got saturated.

The allocator will manage the capability slots between `bias` and `bias + capacity - 1` (inclusive). It is the responsibility of the user to ensure that these slots are not used otherwise.

Definition at line 242 of file [counting_cap_alloc](#).

16.320.3.6 take()

```
template<typename COUNTERTYPE, typename Dbg>
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::take (
    L4::Cap< void > cap) [inline], [noexcept]
```

Increase the reference counter for the capability.

Parameters

<i>cap</i>	Capability, whose reference counter should be increased.
------------	--

If the capability was still free, it will be automatically allocated. Silently does nothing if the capability is not managed by this allocator.

Definition at line 296 of file [counting_cap_alloc](#).

References [L4_CAP_SHIFT](#), and [L4_UNLIKELY](#).

Take a reference to this dataspace.
- virtual unsigned long [release](#) () noexcept
Release a reference to this dataspace.
- virtual long [copy](#) ([l4_addr_t](#) dst_offs, [l4_umword_t](#) src_id, [l4_addr_t](#) src_offs, unsigned long size) noexcept
Copy from src dataspace to this destination dataspace.
- virtual long [clear](#) (unsigned long offs, unsigned long size) const noexcept
Clear a region in the dataspace.
- virtual long [allocate](#) ([l4_addr_t](#) offset, [l4_size_t](#) size, unsigned access) noexcept
Allocate a region within a dataspace.
- virtual unsigned long [page_shift](#) () const noexcept
Define the size of the flexpage to map.
- virtual bool [is_static](#) () const noexcept
Return whether the dataspace is static.
- virtual long [map_info](#) ([l4_addr_t](#) &start_addr, [l4_addr_t](#) &end_addr) noexcept
Return mapping information for no-MMU systems.

16.321.1 Detailed Description

[Dataspace](#) server class.

The default implementation of the interface provides a continuous dataspace with contiguous pages.

Definition at line 29 of file [dataspace_svr](#).

16.321.2 Member Function Documentation

16.321.2.1 [allocate\(\)](#)

```
virtual long L4Re::Util::Dataspace_svr::allocate (
    l4\_addr\_t offset,
    l4\_size\_t size,
    unsigned access) [inline], [virtual], [noexcept]
```

Allocate a region within a dataspace.

Parameters

<i>offset</i>	Offset in the dataspace, in bytes.
<i>size</i>	Size of the range, in bytes.

<i>access</i>	Access mode with which the memory backing the dataspace region should be allocated.
---------------	---

Return values

0	Success
<0	Error

Definition at line 224 of file [dataspace_svr](#).

References [L4_ENODEV](#).

16.321.2.2 clear()

```
virtual long L4Re::Util::Dataspace_svr::clear (  
    unsigned long offs,  
    unsigned long size) const [inline], [virtual], [noexcept]
```

Clear a region in the dataspace.

Parameters

<i>offs</i>	Start of the region
<i>size</i>	Size of the region

Return values

0	Success
<0	Error

Definition at line 192 of file [dataspace_svr](#).

References [L4_ERANGE](#).

16.321.2.3 copy()

```
virtual long L4Re::Util::Dataspace_svr::copy (  
    l4_addr_t dst_offs,  
    l4_umword_t src_id,  
    l4_addr_t src_offs,  
    unsigned long size) [inline], [virtual], [noexcept]
```

Copy from src dataspace to this destination dataspace.

Parameters

<i>dst_offs</i>	Offset into the destination dataspace
<i>src_id</i>	Local id of the source dataspace
<i>src_offs</i>	Offset into the source dataspace
<i>size</i>	Number of bytes to copy

Return values

≥ 0	Number of bytes copied
< 0	An error occurred. The error code may depend on the implementation.

Definition at line 175 of file [dataspace_svr](#).

References [L4_ENODEV](#).

16.321.2.4 is_static()

```
virtual bool L4Re::Util::Dataspace_svr::is_static () const [inline], [virtual], [noexcept]
```

Return whether the dataspace is static.

Returns

True if dataspace is static

Definition at line 244 of file [dataspace_svr](#).

16.321.2.5 map()

```
int L4Re::Util::Dataspace_svr::map (
    Dataspace::Offset offset,
    Dataspace::Map_addr local_addr,
    Dataspace::Flags flags,
    Dataspace::Map_addr min_addr,
    Dataspace::Map_addr max_addr,
    L4::Ipc::Snd_fpage & memory) [inline]
```

Map a region of the dataspace.

Parameters

	<i>offset</i>	Offset to start within data space
	<i>local_addr</i>	Local address to map to.
	<i>flags</i>	Dataspace flags, see L4Re::Dataspace::F::Flags .
	<i>min_addr</i>	Defines start of receive window.

	<i>max_addr</i>	Defines end of receive window.
out	<i>memory</i>	Send fpage to map

Return values

0	Success
<0	Error

Definition at line 57 of file [dataspace_svr](#).

References [L4_EOK](#), [L4_ERANGE](#), [l4_fpage\(\)](#), [L4_PAGESHIFT](#), [l4_round_page\(\)](#), [l4_trunc_page\(\)](#), [l4_trunc_size\(\)](#), and [map_hook\(\)](#).

Here is the call graph for this function:

16.321.2.6 map_hook()

```

virtual int L4Re::Util::Dataspace_svr::map_hook (
    Dataspace::Offset offs,
    unsigned order,
    Dataspace::Flags flags,
    Dataspace::Map_addr * base,
    unsigned * send_order) [inline], [virtual]

```

A hook that is called for acquiring the data to be mapped.

Parameters

<i>offs</i>	Offset in dataspace to supply
<i>order</i>	Log2-size of data to supply
<i>flags</i>	Flags for the mapping
<i>base</i>	Start address of the flexpage to be mapped
<i>send_order</i>	Order (log2 of size) of the flexpage to be mapped

Return values

< 0	Error and the map request will be aborted with that error.
≥ 0	Success

See also[map](#)

Definition at line 136 of file [dataspace_svr](#).

Referenced by [map\(\)](#).

Here is the caller graph for this function:

**16.321.2.7 map_info()**

```
virtual long L4Re::Util::Dataspace_svr::map_info (
    l4_addr_t & start_addr,
    l4_addr_t & end_addr) [inline], [virtual], [noexcept]
```

Return mapping information for no-MMU systems.

The method is only called on no-MMU systems. It should return the address of the underlying backing buffer so that the caller might map the dataspace.

The default implementation always returns an error because the derived class must provide the required information.

See also[L4Re::Dataspace::map_info\(\)](#)

Definition at line 259 of file [dataspace_svr](#).

References [L4_EPERM](#).

16.321.2.8 `page_shift()`

```
virtual unsigned long L4Re::Util::Dataspace_svr::page_shift () const [inline], [virtual],  
[noexcept]
```

Define the size of the flexpage to map.

Returns

flexpage size

Definition at line 236 of file [dataspace_svr](#).

References [L4_LOG2_PAGESIZE](#).

16.321.2.9 `release()`

```
virtual unsigned long L4Re::Util::Dataspace_svr::release () [inline], [virtual], [noexcept]
```

Release a reference to this dataspace.

Returns

Number of references to the dataspace

Default does nothing and returns always zero.

Definition at line 160 of file [dataspace_svr](#).

16.321.2.10 `take()`

```
virtual void L4Re::Util::Dataspace_svr::take () [inline], [virtual], [noexcept]
```

Take a reference to this dataspace.

Default does nothing.

Definition at line 150 of file [dataspace_svr](#).

template<typename PAYLOAD>
class L4Re::Util::Event_buffer_consumer_t< PAYLOAD >

An event buffer consumer.

Definition at line 83 of file [event_buffer](#).

16.322.2 Member Function Documentation**16.322.2.1 foreach_available_event()**

```
template<typename PAYLOAD>
template<typename CB, typename D>
void L4Re::Util::Event_buffer_consumer_t< PAYLOAD >::foreach_available_event (
    CB const & cb,
    D data = D()) [inline]
```

Call function on every available event.

Parameters

<i>cb</i>	Function callback.
<i>data</i>	Data to pass as an argument to the callback.

Definition at line 94 of file [event_buffer](#).

Referenced by [L4Re::Util::Event_buffer_consumer_t< Default_event_payload >::process\(\)](#).

Here is the caller graph for this function:

16.322.2.2 process()

```
template<typename PAYLOAD>
template<typename CB, typename D>
void L4Re::Util::Event_buffer_consumer_t< PAYLOAD >::process (
    L4::Cap< L4::Irq > irq,
    L4::Cap< L4::Thread > thread,
    CB const & cb,
    D data = D()) [inline]
```

Continuously wait for events and process them.

Parameters

<i>irq</i>	Event signal to wait for.
<i>thread</i>	Thread capability of the thread calling this function.
<i>cb</i>	Callback function that is called for each received event.
<i>data</i>	Data to pass as an argument to the processing callback.

Note

This function never returns.

Get event buffer.
- [L4::Cap](#)< [L4::Triggerable](#) > [irq](#) () const
Get event IRQ.

16.325.1 Detailed Description

```
template<typename PAYLOAD>
class L4Re::Util::Event_t< PAYLOAD >
```

Convenience wrapper for getting access to an event object.

After calling [init\(\)](#) the class supplies the event-buffer and the associated IRQ object.

Definition at line [32](#) of file [event](#).

16.325.2 Member Enumeration Documentation

16.325.2.1 Mode

```
template<typename PAYLOAD>  
enum L4Re::Util::Event_t::Mode
```

Modes of operation.

Enumerator

Mode_irq	Create an IRQ and attach, to get notifications.
Mode_polling	Do not use an IRQ.

Definition at line 38 of file [event](#).

16.325.3 Member Function Documentation

16.325.3.1 buffer()

```
template<typename PAYLOAD>
L4Re::Event_buffer_t< PAYLOAD > & L4Re::Util::Event_t< PAYLOAD >::buffer () [inline]
```

Get event buffer.

Returns

[Event](#) buffer object.

Definition at line 148 of file [event](#).

16.325.3.2 init()

```
template<typename PAYLOAD>
template<typename IRQ_TYPE>
int L4Re::Util::Event_t< PAYLOAD >::init (
    L4::Cap< L4Re::Event > event,
    L4Re::Env const * env = L4Re::Env::env(),
    L4Re::Cap_alloc * ca = &L4Re::Util::cap_alloc) [inline]
```

Initialise an event object.

Template Parameters

<i>IRQ_TYPE</i>	Type used for handling notifications from the event provider. This must be derived from L4::Triggerable .
-----------------	---

Parameters

<i>event</i>	Capability to event.
<i>env</i>	Pointer to L4Re-Environment
<i>ca</i>	Pointer to capability allocator.

Return values

<i>0</i>	Success
<i>-L4_ENOMEM</i>	No memory to allocate required capabilities.
<i><0</i>	Other IPC errors.

Definition at line 59 of file [event](#).

16.325.3.3 `init_poll()`

```
template<typename PAYLOAD>
int L4Re::Util::Event_t< PAYLOAD >::init_poll (
    L4::Cap< L4Re::Event > event,
    L4Re::Env const * env = L4Re::Env::env(),
    L4Re::Cap_alloc * ca = &L4Re::Util::cap_alloc) [inline]
```

Initialise an event object in polling mode.

Parameters

<i>event</i>	Capability to event.
<i>env</i>	Pointer to L4Re-Environment
<i>ca</i>	Pointer to capability allocator.

Return values

<i>0</i>	Success
<i>-L4_ENOMEM</i>	No memory to allocate required capabilities.
<i><0</i>	Other IPC errors.

Definition at line 112 of file [event](#).

16.325.3.4 `irq()`

```
template<typename PAYLOAD>
L4::Cap< L4::Triggerable > L4Re::Util::Event_t< PAYLOAD >::irq () const [inline]
```

Get event IRQ.

Returns

[Event](#) IRQ.

Definition at line 155 of file [event](#).

- char const * **find** (int c) const
*Find character. Return **end()** if not found.*
- char const * **rfind** (char const *c) const
*Find right-most character. Return **end()** if not found.*
- **Index starts_with** (cxx::String const &c) const
*Check if **c** is a prefix of string.*
- char const * **find** (int c, char const *s) const
*Find character **c** starting at position **s**. Return **end()** if not found.*
- char const * **find** (char const *c, char const *s) const
Find character set at position.
- char const & **operator[]** (unsigned long idx) const
*Get character at **idx**.*
- char const & **operator[]** (int idx) const
*Get character at **idx**.*
- char const & **operator[]** (**Index** idx) const
*Get character at **idx**.*
- bool **eof** (char const *s) const
*Check if pointer **s** points behind string.*
- template<typename INT>
int **from_dec** (INT *v) const
Convert decimal string to integer.
- template<typename INT>
int **from_hex** (INT *v) const
Convert hex string to integer.
- bool **operator==** (**String** const &o) const
Equality.
- bool **operator!=** (**String** const &o) const
Inequality.

16.327.1 Detailed Description

[Name](#) class.

Definition at line 28 of file [name_space_svr](#).

The documentation for this class was generated from the following file:

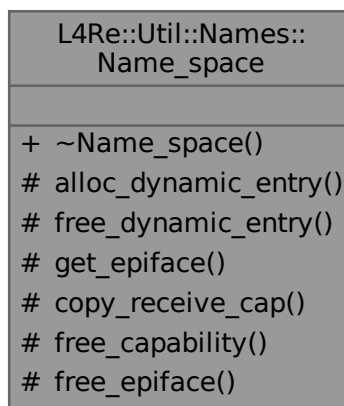

- [l4/re/util/name_space_svr](#)

16.328 L4Re::Util::Names::Name_space Class Reference

Abstract server-side implementation of the L4::Namespace interface.

```
#include <name_space_svr>
```

Collaboration diagram for L4Re::Util::Names::Name_space:

Public Member Functions

- virtual `~Name_space()`
The destructor of the derived class is responsible for freeing resources.

Protected Member Functions

- virtual `Entry * alloc_dynamic_entry (Name const &n, unsigned flags)=0`
Allocate a new entry for the given name.
- virtual `void free_dynamic_entry (Entry *e)=0`
Free an entry previously allocated with [alloc_dynamic_entry\(\)](#).
- virtual `int get_epiface (l4_umword_t data, bool is_local, L4::Epiface **lo)=0`
Return a pointer to the epiface assigned to a given label.
- virtual `int copy_receive_cap (L4::Cap< void > *cap)=0`
Return the receive capability for permanent use.
- virtual `void free_capability (L4::Cap< void > cap)=0`
Free a capability previously acquired with [copy_receive_cap\(\)](#).
- virtual `void free_epiface (L4::Epiface *epiface)=0`
Free epiface previously acquired with [get_epiface\(\)](#).

16.328.1 Detailed Description

Abstract server-side implementation of the L4::Namespace interface.

Note

The derived class is responsible for resource management through the provided interfaces. This includes freeing all resources on destruction!

Definition at line 180 of file [name_space_svr](#).

16.328.2 Member Function Documentation

16.328.2.1 alloc_dynamic_entry()

```
virtual Entry * L4Re::Util::Names::Name_space::alloc_dynamic_entry (
    Name const & n,
    unsigned flags) [protected], [pure virtual]
```

Allocate a new entry for the given name.

Parameters

<i>n</i>	Name of the entry, must be copied.
<i>flags</i>	Entry flags, see Obj::Flags .

Returns

A pointer to the newly allocated entry or NULL on error.

This method is called when a new entry was received. It must allocate memory, copy *n* out of the receive buffer and wrap everything in an Entry.

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

16.328.2.2 copy_receive_cap()

```
virtual int L4Re::Util::Names::Name_space::copy_receive_cap (
    L4::Cap< void > * cap) [protected], [pure virtual]
```

Return the receive capability for permanent use.

Parameters

out	cap	Capability slot with the received capability. Must be permanently available until free_capability() is called.
-----	-----	--

This method is called when a new entry is registered together with a capability mapping. It must decide whether and where to store the capability and return the final capability slot. Typical implementations return the capability slot in the receive window and allocate a new receive window.

16.328.2.3 free_capability()

```
virtual void L4Re::Util::Names::Name_space::free_capability (
    L4::Cap< void > cap) [protected], [pure virtual]
```

Free a capability previously acquired with [copy_receive_cap\(\)](#).

Parameters

in	cap	Capability to free.
----	-----	---------------------

Counterpart of [copy_receive_cap](#). Free the capability slot when the entry is deleted or changed.

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

16.328.2.4 free_dynamic_entry()

```
virtual void L4Re::Util::Names::Name_space::free_dynamic_entry (
    Entry * e) [protected], [pure virtual]
```

Free an entry previously allocated with [alloc_dynamic_entry\(\)](#).

Parameters

e	Entry to free.
---	----------------

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

16.328.2.5 free_epiface()

```
virtual void L4Re::Util::Names::Name_space::free_epiface (
    L4::Epiface * epiface) [protected], [pure virtual]
```

Free epiface previously acquired with [get_epiface\(\)](#).

Parameters

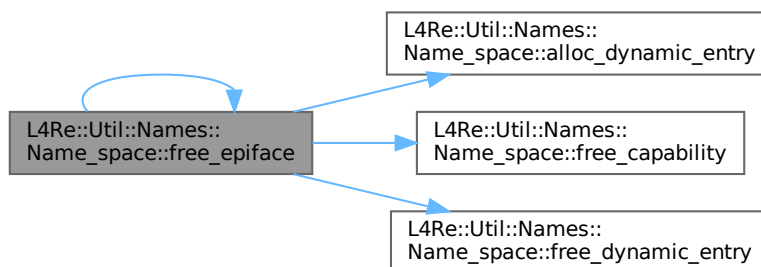

in	<i>epiface</i>	Epiface to free.
----	----------------	------------------

Called when an entry that points to an epiface is deleted allowing implementations that hold resources to free them.

References [alloc_dynamic_entry\(\)](#), [free_capability\(\)](#), [free_dynamic_entry\(\)](#), [free_epiface\(\)](#), [L4_BASE_TASK_CAP](#), [L4_EEXIST](#), [L4_ENOMEM](#), and [L4Re::Namespace::Overwrite](#).

Referenced by [free_epiface\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.328.2.6 get_epiface()

```
virtual int L4Re::Util::Names::Name_space::get_epiface (
    l4_umword_t data,
    bool is_local,
    L4::Epiface ** lo) [protected], [pure virtual]
```

Return a pointer to the epiface assigned to a given label.

Parameters

in	<i>data</i>	Label or in the local case the capability slot of the receiving capability.
in	<i>is_local</i>	If true, a local capability slot was supplied, if false the label of a locally bound IPC gate.
out	<i>lo</i>	Pointer to epiface responsible for the capability.

Returns

[L4_EOK](#) if a valid interface could be found or an error message otherwise.

This method is called when a new entry is registered and some local ID was received for the capability. In this case, the generic implementation needs to get the epiface in order to get the capability.

The callee must make sure that the epiface remains valid until `free_epiface` is called. In particular, the capability slot must not be reallocated as long as the namespace server holds a reference to the epiface.

The documentation for this class was generated from the following file:

- `l4/re/util/name_space_svr`

16.329 L4Re::Util::Object_registry Class Reference

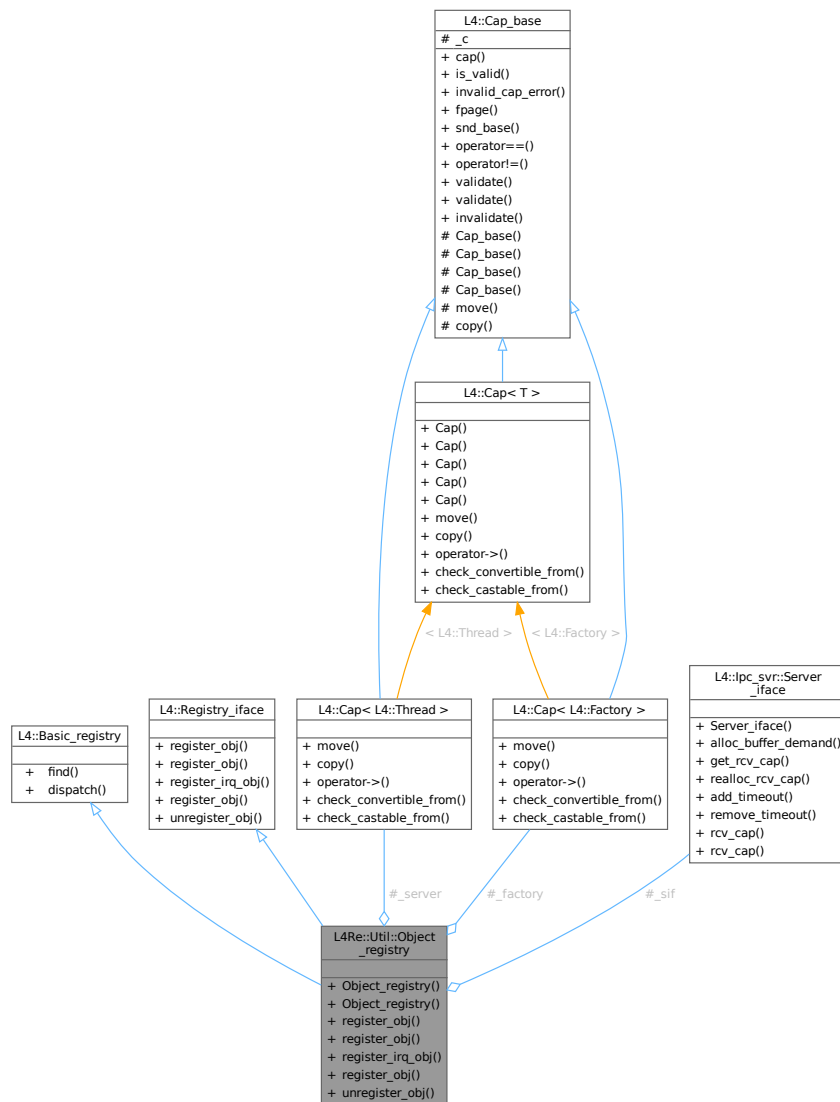

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Object_registry:

Collaboration diagram for L4Re::Util::Object_registry:

Public Member Functions

- [Object_registry](#) ([L4::lpc_svr::Server_iface](#) *sif)
Create a registry for the main thread of the task using the default factory.
- [Object_registry](#) ([L4::lpc_svr::Server_iface](#) *sif, [L4::Cap< L4::Thread >](#) server, [L4::Cap< L4::Factory >](#) factory)
Create a registry for arbitrary threads.
- [L4::Cap< void >](#) [register_obj](#) ([L4::Epiface](#) *o, char const *service) override
Register a new server object to a pre-allocated receive endpoint.
- [L4::Cap< void >](#) [register_obj](#) ([L4::Epiface](#) *o) override
Register a new server object on a newly allocated capability.
- [L4::Cap< L4::Irq >](#) [register_irq_obj](#) ([L4::Epiface](#) *o) override
Register a handler for an interrupt.
- [L4::Cap< L4::Rcv_endpoint >](#) [register_obj](#) ([L4::Epiface](#) *o, [L4::Cap< L4::Rcv_endpoint >](#) ep) override

Register a handler for an already existing interrupt.

- void `unregister_obj` (`L4::Epiface *o`, `bool unmap=true`) override

Remove a server object from the handler list.

Additional Inherited Members

Static Public Member Functions inherited from `L4::Basic_registry`

- static `Value * find` (`l4_umword_t label`)

Get the server object for an `lpc_gate` label.

- static `l4_msgtag_t dispatch` (`l4_msgtag_t tag`, `l4_umword_t label`, `l4_utcb_t *utcb`)

The dispatch function called by the server loop.

16.329.1 Detailed Description

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

This class manages most of the setup of a server object. If necessary, an IPC gate is created, the specified thread is bound to the IPC gate. Incoming IPC is dispatched to the server object based on the label of the IPC gate.

The object registry is also able to manage IRQ endpoints. They require a different method for the object creation. Otherwise they are handled in the same way as IPC gates: a server object is responsible to process the incoming interrupts.

Definition at line 41 of file `object_registry`.

16.329.2 Constructor & Destructor Documentation

16.329.2.1 `Object_registry()` [1/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc_svr::Server_iface * sif) [inline], [explicit]
```

Create a registry for the main thread of the task using the default factory.

Parameters

<code>sif</code>	Server loop interface.
------------------	------------------------

Definition at line 67 of file `object_registry`.

16.329.2.2 `Object_registry()` [2/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc_svr::Server_iface * sif,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory) [inline]
```

Create a registry for arbitrary threads.

Parameters

<i>sif</i>	Server loop interface.
<i>server</i>	Capability to the thread that executes the server objects.
<i>factory</i>	Capability to a factory object capable of creating new IPC gates.

Definition at line 81 of file [object_registry](#).

16.329.3 Member Function Documentation

16.329.3.1 register_irq_obj()

```
L4::Cap< L4::Irq > L4Re::Util::Object_registry::register_irq_obj (
    L4::Epiface * o) [inline], [override], [virtual]
```

Register a handler for an interrupt.

Parameters

<i>o</i>	Server object that handles IRQs.
----------	----------------------------------

Return values

L4::Cap<L4::Irq>	Capability to a new IRQ object on success.
L4::Cap<L4::Irq>::Invalid	The allocation of the IRQ has failed.

The IRQ will be newly allocated using the registry's factory object. The caller must call [unregister_obj\(\)](#) to free all resources.

Implements [L4::Registry_iface](#).

Definition at line 227 of file [object_registry](#).

16.329.3.2 register_obj() [1/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o) [inline], [override], [virtual]
```

Register a new server object on a newly allocated capability.

Parameters

<i>o</i>	Server object that handles IPC requests.
----------	--

Return values

<i>L4::Cap<void></i>	A valid capability to a new IPC gate.
<i>L4::Cap<void>::Invalid</i>	The allocation of the IPC gate has failed.

The IPC gate will be allocated using the registry's factory. The caller must call [unregister_obj\(\)](#) to free all resources.

Implements [L4::Registry_iface](#).

Definition at line 211 of file [object_registry](#).

16.329.3.3 register_obj() [2/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    char const * service) [inline], [override], [virtual]
```

Register a new server object to a pre-allocated receive endpoint.

Parameters

<i>o</i>	Server object that handles IPC requests.
<i>service</i>	Name of a pre-allocated receive endpoint.

Return values

<i>L4::Cap<void></i>	The capability known as <i>service</i> on success.
<i>L4::Cap<void>::Invalid</i>	No capability with the given name found.

The interface must be freed with [unregister_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry_iface](#).

Definition at line 194 of file [object_registry](#).

16.329.3.4 register_obj() [3/3]

```
L4::Cap< L4::Rcv_endpoint > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    L4::Cap< L4::Rcv_endpoint > ep) [inline], [override], [virtual]
```

Register a handler for an already existing interrupt.

Parameters

<i>o</i>	Server object that handles the IPC.
<i>ep</i>	Capability to a receive endpoint, may be a hardware or software interrupt or an IPC gate.

Return values

L4::Cap<L4::Rcv_endpoint>	Capability ep on success.
L4::Cap<L4::Rcv_endpoint>::Invalid	The IRQ attach operation has failed.

The interface must be freed with [unregister_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry_iface](#).

Definition at line 246 of file [object_registry](#).

16.329.3.5 unregister_obj()

```
void L4Re::Util::Object_registry::unregister_obj (
    L4::Epiface * o,
    bool unmap = true) [inline], [override], [virtual]
```

Remove a server object from the handler list.

Parameters

<i>o</i>	Server object to unbind.
<i>unmap</i>	Specifies if the object capability shall be unmapped (true) or not. The default (true) is to unmap the capability.

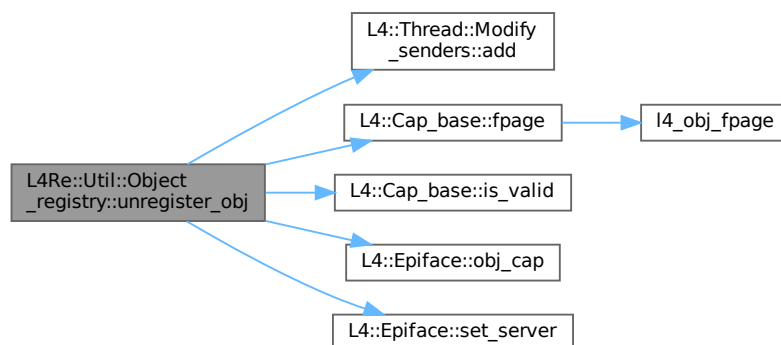

The capability used by the server object will be unmapped if `unmap` is true.

Implements [L4::Registry_iface](#).

Definition at line 262 of file [object_registry](#).

References [L4::Thread::Modify_senders::add\(\)](#), [L4Re::Util::cap_alloc](#), [L4::Cap_base::fpage\(\)](#), [L4::Cap_base::Invalid](#), [L4::Cap_base::is_valid\(\)](#), [L4_FP_ALL_SPACES](#), [L4::Epiface::obj_cap\(\)](#), and [L4::Epiface::set_server\(\)](#).

16.330 L4Re::Util::Ref_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap of the capability selector.

```
#include <cap_alloc>
```

Inheritance diagram for L4Re::Util::Ref_cap< T >:

Collaboration diagram for L4Re::Util::Ref_cap< T >:

16.330.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_cap< T >
```

Automatic capability that implements automatic free and unmap of the capability selector.

Template Parameters

<i>T</i>	Type of the object that is referred by the capability.
----------	--

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero.

Usage:

```
L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap
        ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
    L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

    global_ds_cap = ds_cap;
    // reference count is now 2
    ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
```

Definition at line 142 of file [cap_alloc](#).

The documentation for this struct was generated from the following file:

- [l4/re/util/cap_alloc](#)

16.331 L4Re::Util::Ref_del_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap+delete of the capability selector.

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Ref_del_cap< T >:

16.331.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_del_cap< T >
```

Automatic capability that implements automatic free and unmap+delete of the capability selector.

Template Parameters

<i>T</i>	Type of the object that is referred by the capability.
----------	--

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero. The main difference to [Ref_cap](#) is that the unmap is done with the deletion flag enabled and this leads to the deletion of the object if the current task holds appropriate deletion rights.

Usage:

```
L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap
        ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
    L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

    global_ds_cap = ds_cap;
    // reference count is now 2
    ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
...
global_ds_cap = L4_INVALID_CAP;
// reference count dropped to 0 (data space shall be deleted).
```

Definition at line 183 of file [cap_alloc](#).

16.332 L4Re::Util::Registry_server< LOOP_HOOKS > Class Template Reference

A server loop object which has a [Object_registry](#) included.

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:

Collaboration diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:

Public Member Functions

- `Registry_server()`
Create a new server loop object for the main thread of the task.
- `Registry_server(l4_utcb_t *, L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)`
Create a new server loop object for an arbitrary thread and factory.
- `Registry_server(L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)`

- *Create a new server loop object for an arbitrary thread and factory.*
- `Object_registry` const * **registry** () const
Return registry of this server loop.
- `Object_registry` * **registry** ()
Return registry of this server loop.
- void `L4_NORETURN` **loop** (`l4_utcb_t` *utcb=`l4_utcb`())
Start the server loop.
- template<typename Printer>
void `L4_NORETURN` **loop_dbg** (Printer printer, `l4_utcb_t` *utcb=`l4_utcb`())
Start the server loop with error printing.

Public Member Functions inherited from `L4::Server< L4::lpc_svr::Default_loop_hooks >`

- `Server` (`l4_utcb_t` *)
Initializes the server loop.
- `L4_NORETURN` void **internal_loop** (DISPATCH dispatch, `l4_utcb_t` *)
The server loop.
- `L4_NORETURN` void **loop_noexc** (R r, `l4_utcb_t` *u=`l4_utcb`())
Server loop without exception handling.
- `L4_NORETURN` void **loop** (R r, `l4_utcb_t` *u=`l4_utcb`())
Server loop with internal exception handling.
- `L4_NORETURN` void **loop_dbg** (R r, Printer p, `l4_utcb_t` *u=`l4_utcb`())
Server loop with internal exception handling including message printing.

Public Member Functions inherited from `L4::lpc_svr::Br_manager_no_buffers`

- int **alloc_buffer_demand** (Demand const &demand) override
Tells the server to allocate buffers for the given demand.
- `L4::Cap< void >` **get_rcv_cap** (int) const override
Returns `L4::Cap<void>::Invalid`, we have no buffer management.
- int **realloc_rcv_cap** (int) override
Returns `-L4_ENOMEM`, we have no buffer management.
- int **add_timeout** (Timeout *, `l4_kernel_clock_t`) override
Returns `-L4_ENOSYS`, we have no timeout queue.
- int **remove_timeout** (Timeout *) override
Returns `-L4_ENOSYS`, we have no timeout queue.

Public Member Functions inherited from `L4::lpc_svr::Server_iface`

- `Server_iface` ()
Make a server interface.
- template<typename T>
`L4::Cap< T >` **rcv_cap** (int index) const
Get given receive buffer as typed capability.
- `L4::Cap< void >` **rcv_cap** (int index) const
Get receive cap with the given index as generic (void) type.

Additional Inherited Members

Public Types inherited from [L4::lpc_svr::Server_iface](#)

- typedef [L4::Type_info::Demand](#) **Demand**
Data type expressing server-side demand for receive buffers.

Protected Member Functions inherited from [L4::Server< L4::lpc_svr::Default_loop_hooks >](#)

- [l4_msgtag_t](#) **reply_n_wait** ([l4_msgtag_t](#) reply, [l4_umword_t](#) *p, [l4_utcb_t](#) *)
Internal implementation for reply and wait.

Protected Member Functions inherited from [L4::lpc_svr::Br_manager_no_buffers](#)

- unsigned **first_free_br** () const
Returns 1 as first free buffer.
- void **setup_wait** ([l4_utcb_t](#) *utcb, [L4::lpc_svr::Reply_mode](#))
Setup wait function for the server loop ([Server<>](#)).

16.332.1 Detailed Description

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
class L4Re::Util::Registry_server< LOOP_HOOKS >
```

A server loop object which has a [Object_registry](#) included.

Examples

[examples/clntsrv/src/server.cc](#), [examples/libs/l4re/c++/shared_ds/ds_srv.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 293 of file [object_registry](#).

16.332.2 Constructor & Destructor Documentation

16.332.2.1 Registry_server() [1/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server () [inline]
```

Create a new server loop object for the main thread of the task.

Precondition

Must be called from the main thread or behaviour is undefined.

Definition at line 305 of file [object_registry](#).

16.332.2.2 Registry_server() [2/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
    l4_utcb_t * ,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

<i>server</i>	Capability to thread running the server loop.
<i>factory</i>	Capability to factory object used to create new IPC gates.

Deprecated Note that this variant of the constructor is deprecated, please do not supply the UTCB pointer, it's not used.

Definition at line 317 of file [object_registry](#).

16.332.2.3 Registry_server() [3/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

<i>server</i>	Capability to thread running the server loop.
<i>factory</i>	Capability to factory object used to create new IPC gates.

Definition at line 328 of file [object_registry](#).

16.332.3 Member Function Documentation

16.332.3.1 loop()

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
void L4_NORETURN L4Re::Util::Registry_server< LOOP_HOOKS >::loop (
    l4_utcb_t * utcb = l4_utcb()) [inline]
```

Start the server loop.

Parameters

<i>utcb</i>	The UTCB of the thread running the server loop, defaults to l4_utcb() .
-------------	---

Definition at line 344 of file [object_registry](#).

Referenced by [L4Re::Util::Registry_server< Loop_hooks >::loop\(\)](#).

Here is the caller graph for this function:

16.332.3.2 loop_dbg()

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
template<typename Printer>
void L4_NORETURN L4Re::Util::Registry_server< LOOP_HOOKS >::loop_dbg (
    Printer printer,
    l4_utcb_t * utcb = l4_utcb()) [inline]
```

Start the server loop with error printing.

Template Parameters

<i>Printer</i>	The printer type.
----------------	-------------------

Parameters

<i>printer</i>	The printer object on which printf() is called.
<i>utcb</i>	The UTCB of the thread running the server loop, defaults to l4_utcb() .

Definition at line [356](#) of file [object_registry](#).

Referenced by [L4Re::Util::Registry_server< Loop_hooks >::loop_dbg\(\)](#).

Here is the caller graph for this function:

16.333 L4Re::Util::Smart_cap_auto< Unmap_flags > Class Template Reference

Helper for [Unique_cap](#) and [Unique_del_cap](#).

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Smart_cap_auto< Unmap_flags >:

Static Public Member Functions

- static void **free** ([L4::Cap_base](#) &c)
Free the provided capability.
- static void **invalidate** ([L4::Cap_base](#) &c)
Invalidate the provided capability.

16.333.1 Detailed Description

```
template<unsigned long Unmap_flags = L4_FP_ALL_SPACES>
class L4Re::Util::Smart_cap_auto< Unmap_flags >
```

Helper for [Unique_cap](#) and [Unique_del_cap](#).

Definition at line 45 of file [cap_alloc](#).

The documentation for this class was generated from the following file:

- [l4/re/util/cap_alloc](#)

16.334 L4Re::Util::Smart_count_cap< Unmap_flags > Class Template Reference

Helper for [Ref_cap](#) and [Ref_del_cap](#).

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Smart_count_cap< Unmap_flags >:

L4Re::Util::Smart_count_cap< Unmap_flags >	
+	free()
+	invalidate()
+	copy()

Static Public Member Functions

- static void **free** ([L4::Cap_base](#) &c) noexcept
Free operation for [L4::Smart_cap](#) (decrement ref count and delete if 0).
- static void **invalidate** ([L4::Cap_base](#) &c) noexcept
Invalidate operation for [L4::Smart_cap](#).
- static [L4::Cap_base](#) **copy** ([L4::Cap_base](#) const &src)
Copy operation for [L4::Smart_cap](#) (increment ref count).

16.334.1 Detailed Description

```
template<unsigned long Unmap_flags = L4_FP_ALL_SPACES>
class L4Re::Util::Smart_count_cap< Unmap_flags >
```

Helper for [Ref_cap](#) and [Ref_del_cap](#).

Definition at line 76 of file [cap_alloc](#).

The documentation for this class was generated from the following file:

16.335 L4Re::Util::Vcon_svr< SVR > Class Template Reference

[Console](#) server template class.

```
#include <vcon_svr>
```

Collaboration diagram for L4Re::Util::Vcon_svr< SVR >:

16.335.1 Detailed Description

```
template<typename SVR>
class L4Re::Util::Vcon_svr< SVR >
```

[Console](#) server template class.

This template uses `vcon_write()` and `vcon_read()` to get and deliver data from the implementor.

`vcon_read()` needs to update the status argument with the `L4_vcon_read_stat` flags, especially the `L4_VCON_READ_STAT_DONE` flag to indicate that there's nothing more to read for the other end.

`vcon_write()` gets the live data from the UTCB. Make sure to copy out the data before using the UTCB again.

The size parameter of both functions is given in bytes.

Definition at line [36](#) of file [vcon_svr](#).

The documentation for this class was generated from the following file:

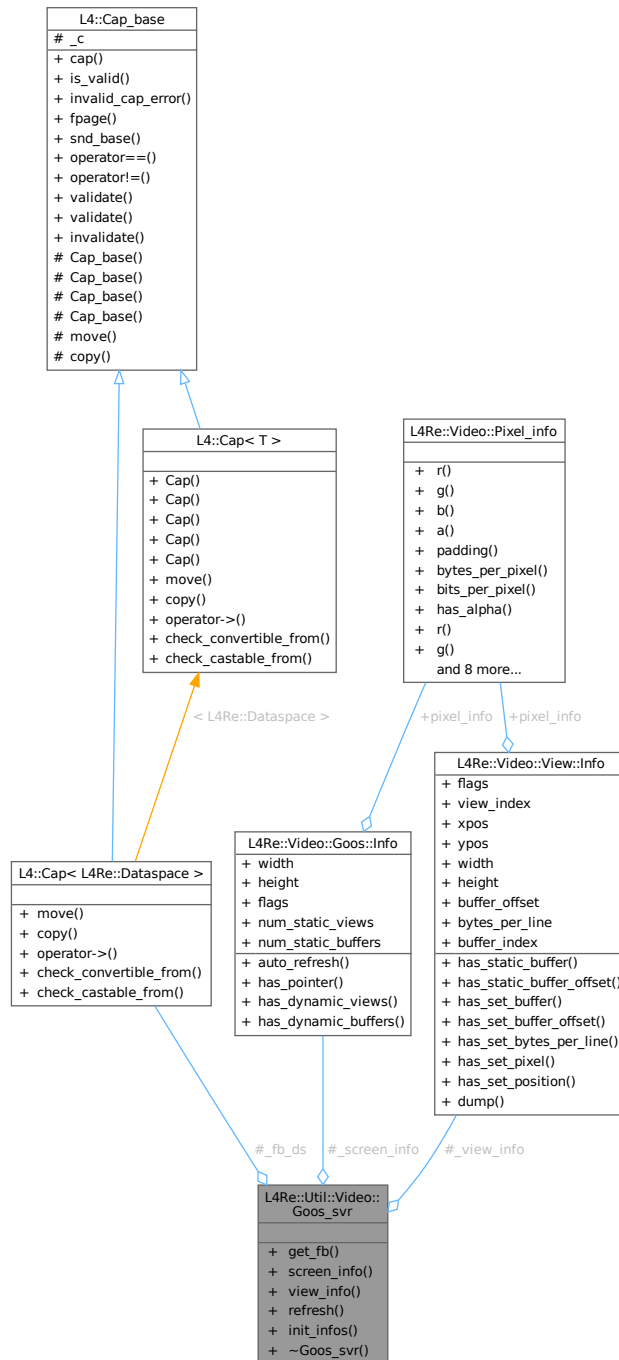

- `l4/re/util/vcon_svr`

16.336 L4Re::Util::Video::Goos_svr Class Reference

Goos server class.

```
#include <goos_svr>
```

Collaboration diagram for L4Re::Util::Video::Goos_svr:

Public Member Functions

- **L4::Cap< L4Re::Dataspace >** **get_fb ()** const
Return framebuffer memory dataspace.
- **L4Re::Video::Goos::Info** const * **screen_info ()** const
Goos information structure.
- **L4Re::Video::View::Info** const * **view_info ()** const

View information structure.

- virtual int [refresh](#) (int x, int y, int w, int h)

Refresh area of the framebuffer.

- void [init_infos](#) ()

Initialize the view information structure of this object.

- virtual \sim [Goos_svr](#) ()

Destructor.

Protected Attributes

View information.

16.336.1 Detailed Description

Goos server class.

Definition at line 25 of file [goos_svr](#).

16.336.2 Member Function Documentation

16.336.2.1 [get_fb\(\)](#)

```
L4::Cap< L4Re::Dataspace > L4Re::Util::Video::Goos\_svr::get\_fb () const [inline]
```

Return framebuffer memory dataspace.

Returns

Goos memory dataspace

Definition at line 42 of file [goos_svr](#).

References [_fb_ds](#).

16.336.2.2 [init_infos\(\)](#)

```
void L4Re::Util::Video::Goos\_svr::init\_infos () [inline]
```

Initialize the view information structure of this object.

This function initializes the view info structure of this goos object based on the information in the goos information, i.e. the width, height and pixel_info of the goos information has to contain valid values before calling [init_info\(\)](#).

Definition at line 78 of file [goos_svr](#).

References [_screen_info](#), and [_view_info](#).

16.336.2.3 refresh()

```
virtual int L4Re::Util::Video::Goos_svr::refresh (  
    int x,  
    int y,  
    int w,  
    int h) [inline], [virtual]
```

Refresh area of the framebuffer.

Parameters

<i>x</i>	X coordinate (pixels)
<i>y</i>	Y coordinate (pixels)
<i>w</i>	Width of area in pixels
<i>h</i>	Height of area in pixels

Returns

0 on success, negative error code otherwise

Definition at line 66 of file [goos_svr](#).

References [L4_ENOSYS](#).

16.336.2.4 screen_info()

```
L4Re::Video::Goos::Info const * L4Re::Util::Video::Goos_svr::screen_info () const [inline]
```

Goos information structure.

Returns

Return goos information structure.

16.337 L4Re::Vfs::Be_file Class Reference

Boiler plate class for implementing an open file for [L4Re::Vfs](#).

```
#include <backend>
```

Inheritance diagram for L4Re::Vfs::Be_file:

Collaboration diagram for L4Re::Vfs::Be_file:

Public Member Functions

- `int unlock_all_locks ()` noexcept override
Unlock all locks on the file.
- `L4::Cap< L4Re::Dataspace > data_space ()` noexcept override
Get an [L4Re::Dataspace](#) object for the file.
- `ssize_t readv (const struct iovec *, int)` noexcept override
Default backend for POSIX read and readv functions.
- `ssize_t writev (const struct iovec *, int)` noexcept override
Default backend for POSIX write and writev functions.
- `ssize_t pwritev (const struct iovec *, int, off64_t)` noexcept override
Default backend for POSIX pwrite and pwritev functions.
- `ssize_t preadv (const struct iovec *, int, off64_t)` noexcept override
Default backend for POSIX pread and preadv functions.
- `off64_t lseek (off64_t, int)` noexcept override
Default backend for POSIX seek and lseek functions.
- `int ftruncate (off64_t)` noexcept override
Default backend for the POSIX truncate, ftruncate and similar functions.
- `int fsync ()` const noexcept override
Default backend for POSIX fsync.
- `int fdatasync ()` const noexcept override
Default backend for POSIX fdatasync.

- int **ioctl** (unsigned long, va_list) noexcept override
Default backend for POSIX ioctl.
- int **fstat** (struct stat64 *) const noexcept override
Get status information for the file.
- int **fchmod** (mode_t) noexcept override
Default backend for POSIX chmod and fchmod.
- int **get_status_flags** () const noexcept override
Default backend for POSIX fcntl subfunctions.
- int **set_status_flags** (long) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **get_lock** (struct flock64 *) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **set_lock** (struct flock64 *, bool) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **faccessat** (const char *, int, int) noexcept override
Default backend for POSIX access and faccessat functions.
- int **fchmodat** (const char *, mode_t, int) noexcept override
Default backend for POSIX fchmodat function.
- int **utime** (const struct utimbuf *) noexcept override
Default backend for POSIX utime.
- int **utimes** (const struct timeval[2]) noexcept override
Default backend for POSIX utimes.
- int **utimensat** (const char *, const struct timespec[2], int) noexcept override
Default backend for POSIX utimensat.
- int **mkdir** (const char *, mode_t) noexcept override
Default backend for POSIX mkdir and mkdirat.
- int **unlink** (const char *) noexcept override
Default backend for POSIX unlink, unlinkat.
- int **rename** (const char *, const char *) noexcept override
Default backend for POSIX rename, renameat.
- int **link** (const char *, const char *) noexcept override
Default backend for POSIX link, linkat.
- int **symlink** (const char *, const char *) noexcept override
Default backend for POSIX symlink, symlinkat.
- int **rmdir** (const char *) noexcept override
Default backend for POSIX rmdir, rmdirat.
- ssize_t **readlink** (char *, size_t) override
Default backend for POSIX readlink, readlinkat.
- bool **check_ready** ([Ready_type](#)) noexcept override
Default implementation of a readiness check.

Additional Inherited Members

Public Types inherited from [L4Re::Vfs::Generic_file](#)

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

16.337.1 Detailed Description

Boiler plate class for implementing an open file for [L4Re::Vfs](#).

This class may be used as a base class for everything that a POSIX file descriptor may point to. This are things such as regular files, directories, special device files, streams, pipes, and so on.

Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 30 of file [backend](#).

16.337.2 Member Function Documentation

16.337.2.1 `check_ready()`

```
bool L4Re::Vfs::Be_file::check_ready (
    Ready_type ) [inline], [override], [virtual], [noexcept]
```

Default implementation of a readiness check.

By default, we assume a file is not ready for an I/O operation/condition since the proper semantics of that relies on the backend.

Returns

Always false.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 217 of file [backend](#).

16.337.2.2 `data_space()`

```
L4::Cap< L4Re::Dataspace > L4Re::Vfs::Be_file::data_space () [inline], [override], [virtual],
[noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implements [L4Re::Vfs::Regular_file](#).

Definition at line 47 of file [backend](#).

References [L4::Cap_base::Invalid](#).

16.337.2.3 `fstat()`

```
int L4Re::Vfs::Be_file::fstat (
    struct stat64 * buf) const [inline], [override], [virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

out	buf	This buffer is filled with the status information.
-----	-----	--

Returns

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 86 of file [backend](#).

16.337.2.4 unlock_all_locks()

```
int L4Re::Vfs::Be_file::unlock_all_locks () [inline], [override], [virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 43 of file [backend](#).

The documentation for this class was generated from the following file:

- [l4/l4re_vfs/backend](#)

16.338 L4Re::Vfs::Be_file_system Class Reference

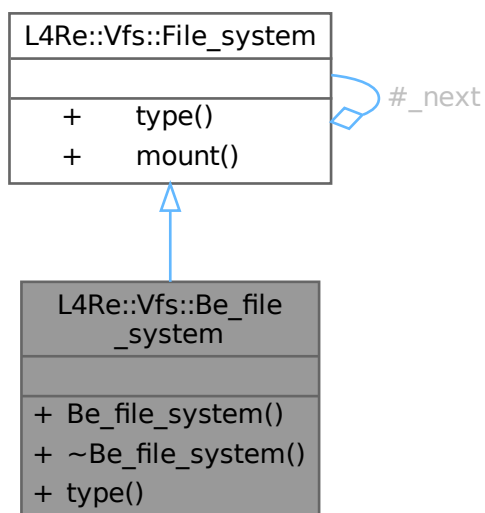

Boilerplate class for implementing a [L4Re::Vfs::File_system](#).

```
#include <backend>
```

Inheritance diagram for L4Re::Vfs::Be_file_system:

Collaboration diagram for L4Re::Vfs::Be_file_system:

Public Member Functions

- [Be_file_system](#) (char const *fstype) noexcept
Create a file-system object for the given fstype.
- [~Be_file_system](#) () noexcept
Destroy a file-system object.
- char const * [type](#) () const noexcept override
Return the file-system type.

Public Member Functions inherited from [L4Re::Vfs::File_system](#)

- virtual int [mount](#) (char const *source, unsigned long mountflags, void const *data, [cxx::Ref_ptr](#)< [File](#) > *dir) noexcept=0
Create a directory object dir representing source mounted with this file system.

16.338.1 Detailed Description

Boilerplate class for implementing a [L4Re::Vfs::File_system](#).

This class already takes care of registering and unregistering the file system in the global registry and implements the [type\(\)](#) method.

Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 310 of file [backend](#).

16.338.2 Constructor & Destructor Documentation

16.338.2.1 [Be_file_system](#)()

```
L4Re::Vfs::Be_file_system::Be_file_system (
    char const * fstype) [inline], [explicit], [noexcept]
```

Create a file-system object for the given *fstype*.

Parameters

<i>fstype</i>	The type that type() shall return.
---------------	--

This constructor takes care of registering the file system in the registry of [L4Re::Vfs::vfs_ops](#).

Definition at line 324 of file [backend](#).

16.338.2.2 ~Be_file_system()

```
L4Re::Vfs::Be_file_system::~Be_file_system () [inline], [noexcept]
```

Destroy a file-system object.

This destructor takes care of removing this file system from the registry of L4Re::Vfs::vfs_ops.

Definition at line 336 of file [backend](#).

16.338.3 Member Function Documentation

16.338.3.1 type()

```
char const * L4Re::Vfs::Be_file_system::type () const [inline], [override], [virtual], [noexcept]
```

Return the file-system type.

Returns the file-system type given as *fstype* in the constructor.

Implements [L4Re::Vfs::File_system](#).

Definition at line 346 of file [backend](#).

The documentation for this class was generated from the following file:

- [l4/l4re_vfs/backend](#)

16.339 L4Re::Vfs::Directory Class Reference

Interface for a POSIX file that is a directory.

```
#include <vfs.h>
```

Collaboration diagram for L4Re::Vfs::Directory:

L4Re::Vfs::Directory	
+	faccessat()
+	mkdir()
+	unlink()
+	rename()
+	link()
+	symlink()
+	rmdir()

Public Member Functions

- virtual int [faccessat](#) (const char *path, int mode, int flags) noexcept=0
Check access permissions on the given file.
- virtual int [mkdir](#) (const char *path, mode_t mode) noexcept=0
Create a new subdirectory.
- virtual int [unlink](#) (const char *path) noexcept=0
Unlink the given file from that directory.
- virtual int [rename](#) (const char *src_path, const char *dst_path) noexcept=0
Rename the given file.
- virtual int [link](#) (const char *src_path, const char *dst_path) noexcept=0
Create a hard link (second name) for the given file.
- virtual int [symlink](#) (const char *src_path, const char *dst_path) noexcept=0
Create a symbolic link for the given file.
- virtual int [rmdir](#) (const char *path) noexcept=0
Delete an empty directory.

16.339.1 Detailed Description

Interface for a POSIX file that is a directory.

This interface provides functionality for directory files in the [L4Re::Vfs](#). However, real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line 160 of file [vfs.h](#).

16.339.2 Member Function Documentation

16.339.2.1 faccessat()

```
virtual int L4Re::Vfs::Directory::faccessat (
    const char * path,
    int mode,
    int flags) [pure virtual], [noexcept]
```

Check access permissions on the given file.

Backend function for POSIX access and faccessat functions.

Parameters

<i>path</i>	The path relative to this directory. Note: <i>path</i> is relative to this directory and may contain subdirectories.
<i>mode</i>	The access mode to check.
<i>flags</i>	The flags as in POSIX faccessat (AT_EACCESS, AT_SYMLINK_NOFOLLOW).

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.2 link()

```
virtual int L4Re::Vfs::Directory::link (
    const char * src_path,
    const char * dst_path) [pure virtual], [noexcept]
```

Create a hard link (second name) for the given file.

Backend for the POSIX link and linkat functions.

Parameters

<i>src_path</i>	The old name of the file. Note: <i>src_path</i> is relative to this directory and may contain subdirectories.
<i>dst_path</i>	The new (second) name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.3 mkdir()

```
virtual int L4Re::Vfs::Directory::mkdir (
    const char * path,
    mode_t mode) [pure virtual], [noexcept]
```

Create a new subdirectory.

Backend for POSIX mkdir and mkdirat function calls.

Parameters

<i>path</i>	The name of the subdirectory to create. Note: <i>path</i> is relative to this directory and may contain subdirectories.
<i>mode</i>	The file mode to use for the new directory.

Returns

0 on success, or <0 on error. -ENOTDIR if this or some component in path is not a directory.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.4 rename()

```
virtual int L4Re::Vfs::Directory::rename (  
    const char * src_path,  
    const char * dst_path) [pure virtual], [noexcept]
```

Rename the given file.

Backend for the POSIX rename, renameat functions.

Parameters

<i>src_path</i>	The old name of the file to rename. Note: <i>src_path</i> is relative to this directory and may contain subdirectories.
<i>dst_path</i>	The new name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.5 rmdir()

```
virtual int L4Re::Vfs::Directory::rmdir (  
    const char * path) [pure virtual], [noexcept]
```

Delete an empty directory.

Backend for POSIX rmdir, rmdirat functions.

Parameters

<i>path</i>	The name of the directory to remove. Note: <i>path</i> is relative to this directory and may contain subdirectories.
-------------	--

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.6 symlink()

```
virtual int L4Re::Vfs::Directory::symlink (
    const char * src_path,
    const char * dst_path) [pure virtual], [noexcept]
```

Create a symbolic link for the given file.

Backend for the POSIX symlink and symlinkat functions.

Parameters

<i>src_path</i>	The old name of the file. Note: <i>src_path</i> shall be an absolute path.
<i>dst_path</i>	The name for symlink. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.339.2.7 unlink()

```
virtual int L4Re::Vfs::Directory::unlink (
    const char * path) [pure virtual], [noexcept]
```

Unlink the given file from that directory.

Backend for the POSIX unlink and unlinkat functions.

Parameters

<i>path</i>	The name of the file to unlink. Note: <i>path</i> is relative to this directory and may contain subdirectories.
-------------	---

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

16.340 L4Re::Vfs::File Class Reference

The basic interface for an open POSIX file.

```
#include <vfs.h>
```

Collaboration diagram for L4Re::Vfs::File:

Additional Inherited Members

Public Types inherited from [L4Re::Vfs::Generic_file](#)

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

Public Member Functions inherited from [L4Re::Vfs::Generic_file](#)

- virtual int [unlock_all_locks](#) () noexcept=0
Unlock all locks on the file.
- virtual int [fstat](#) (struct stat64 *buf) const noexcept=0
Get status information for the file.
- virtual int [fchmod](#) (mode_t) noexcept=0
Change POSIX access rights on the file.
- virtual int [get_status_flags](#) () const noexcept=0
Get file status flags (fcntl F_GETFL).
- virtual int [set_status_flags](#) (long flags) noexcept=0
Set file status flags (fcntl F_SETFL).
- virtual bool [check_ready](#) ([Ready_type](#) rt) noexcept=0
Check whether the file is ready for an I/O operation/condition.

Public Member Functions inherited from [L4Re::Vfs::Regular_file](#)

- virtual [L4::Cap](#)< [L4Re::Dataspace](#) > [data_space](#) () noexcept=0
Get an [L4Re::Dataspace](#) object for the file.
- virtual ssize_t [readv](#) (const struct iovec *, int iovcnt) noexcept=0
Read one or more blocks of data from the file.
- virtual ssize_t [writev](#) (const struct iovec *, int iovcnt) noexcept=0
Write one or more blocks of data to the file.
- virtual off64_t [lseek](#) (off64_t, int) noexcept=0
Change the file pointer.
- virtual int [ftruncate](#) (off64_t pos) noexcept=0
Truncate the file at the given position.
- virtual int [fsync](#) () const noexcept=0
Sync the data and meta data to persistent storage.
- virtual int [fdatsync](#) () const noexcept=0
Sync the data to persistent storage.
- virtual int [get_lock](#) (struct flock64 *lock) noexcept=0
Test if the given lock can be placed in the file.
- virtual int [set_lock](#) (struct flock64 *lock, bool wait) noexcept=0
Acquire or release the given lock on the file.

Public Member Functions inherited from L4Re::Vfs::Directory

- virtual int [faccessat](#) (const char *path, int mode, int flags) noexcept=0
Check access permissions on the given file.
- virtual int [mkdir](#) (const char *path, mode_t mode) noexcept=0
Create a new subdirectory.
- virtual int [unlink](#) (const char *path) noexcept=0
Unlink the given file from that directory.
- virtual int [rename](#) (const char *src_path, const char *dst_path) noexcept=0
Rename the given file.

Create a hard link (second name) for the given file.
- virtual int [symlink](#) (const char *src_path, const char *dst_path) noexcept=0
Create a symbolic link for the given file.
- virtual int [rmdir](#) (const char *path) noexcept=0
Delete an empty directory.

Public Member Functions inherited from L4Re::Vfs::Special_file

- virtual int [ioctl](#) (unsigned long cmd, va_list args) noexcept=0
The famous IO control.

16.340.1 Detailed Description

The basic interface for an open POSIX file.

An open POSIX file can be anything that hides behind a POSIX file descriptor. This means that even directories are files. An open file can be anything from a directory to a special device file so see [Generic_file](#), [Regular_file](#), [Directory](#), and [Special_file](#) for more information.

Note

For implementing a backend for the [L4Re::Vfs](#) [L4Re::Vfs::Be_file](#) may be used as a base class.

Definition at line 455 of file [vfs.h](#).

The documentation for this class was generated from the following file:

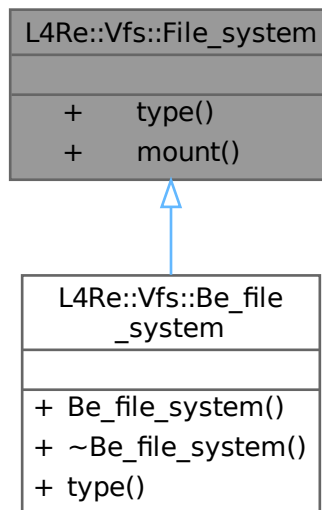

- [l4/l4re_vfs/vfs.h](#)

16.341 L4Re::Vfs::File_system Class Reference

Basic interface for an [L4Re::Vfs](#) file system.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::File_system:

Collaboration diagram for L4Re::Vfs::File_system:

Public Member Functions

- virtual char const * `type` () const noexcept=0
Returns the type of the file system used in mount as fstype argument.
- virtual int `mount` (char const *source, unsigned long mountflags, void const *data, `cxx::Ref_ptr`< `File` > *dir) noexcept=0
Create a directory object dir representing source mounted with this file system.

16.341.1 Detailed Description

Basic interface for an [L4Re::Vfs](#) file system.

Note

For implementing a special file system [L4Re::Vfs::Be_file_system](#) may be used as a base class.

The main purpose of this interface is to have a single object for each supported file-system type (e.g., ext2, vfat) that exists in the application and is registered at the [L4Re::Vfs::Fs](#) singleton available via [L4Re::Vfs::vfs_ops](#). Ultimately, the POSIX mount function calls the [File_system::mount](#) method matching the file-system type given in mount.

Definition at line 857 of file [vfs.h](#).

16.341.2 Member Function Documentation

16.341.2.1 mount()

```
virtual int L4Re::Vfs::File_system::mount (
    char const * source,
    unsigned long mountflags,
    void const * data,
    cxx::Ref_ptr< File > * dir) [pure virtual], [noexcept]
```

Create a directory object *dir* representing *source* mounted with this file system.

Parameters

	<i>source</i>	The path to the source device to mount. This may also be some URL or anything file-system specific.
	<i>mountflags</i>	The mount flags as specified in the POSIX mount call.
	<i>data</i>	The data as specified in the POSIX mount call. The contents are file-system specific.
out	<i>dir</i>	A new directory object representing the file-system root directory.

Returns

0 on success, and <0 on error (e.g. -EINVAL).

References [mount\(\)](#).

Referenced by [mount\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.341.2.2 type()

```
virtual char const * L4Re::Vfs::File_system::type () const [pure virtual], [noexcept]
```

Returns the type of the file system used in mount as fstype argument.

Note

This method is already provided by [Be_file_system](#).

Implemented in [L4Re::Vfs::Be_file_system](#).

The documentation for this class was generated from the following file:

- `l4/l4re_vfs/vfs.h`

16.342 L4Re::Vfs::Fs Class Reference

POSIX File-system related functionality.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Fs:

Collaboration diagram for L4Re::Vfs::Fs:

Public Member Functions

- virtual `cxx::Ref_ptr< File > get_file` (int fd) noexcept=0
Get the `L4Re::Vfs::File` for the file descriptor fd.
- virtual `cxx::Ref_ptr< File > get_root` () noexcept=0
Get the directory object for the application's root directory.
- virtual `cxx::Ref_ptr< File > get_cwd` () noexcept
Get the directory object for the application's current working directory.
- virtual void `set_cwd` (cxx::Ref_ptr< File > const &) noexcept
Set the current working directory for the application.
- virtual int `alloc_fd` (cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil) noexcept=0
Allocate the next free file descriptor.
- virtual `cxx::Pair< cxx::Ref_ptr< File >, int > set_fd` (int fd, cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil) noexcept=0
Set the file object referenced by the file descriptor fd.
- virtual `cxx::Ref_ptr< File > free_fd` (int fd) noexcept=0
Free the file descriptor fd.
- virtual int `mount` (char const *path, cxx::Ref_ptr< File > const &dir) noexcept=0
Mount a given file object at the given global path in the VFS.
- int `mount` (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data) noexcept
Backend for the POSIX mount call.

16.342.1 Detailed Description

POSIX File-system related functionality.

Note

This class usually exists as a singleton and as a superclass of `L4Re::Vfs::Ops` (

See also

`L4Re::Vfs::vfs_ops`).

Definition at line 946 of file `vfs.h`.

16.342.2 Member Function Documentation

16.342.2.1 alloc_fd()

```
virtual int L4Re::Vfs::Fs::alloc_fd (
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil) [pure virtual], [noexcept]
```

Allocate the next free file descriptor.

Parameters

<i>f</i>	The file to assign to that file descriptor.
----------	---

Returns

The allocated file descriptor, or -EMFILE on error.

16.342.2.2 free_fd()

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::free_fd (
    int fd) [pure virtual], [noexcept]
```

Free the file descriptor *fd*.

Parameters

<i>fd</i>	The file descriptor to free.
-----------	------------------------------

Returns

A pointer to the file object that was assigned to the *fd*.

16.342.2.3 get_file()

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::get_file (
    int fd) [pure virtual], [noexcept]
```

Get the [L4Re::Vfs::File](#) for the file descriptor *fd*.

Parameters

<i>fd</i>	The POSIX file descriptor number.
-----------	-----------------------------------

Returns

A pointer to the [File](#) object, or 0 if *fd* is not open.

16.342.2.4 mount()

```
virtual int L4Re::Vfs::Fs::mount (
    char const * path,
    cxx::Ref_ptr< File > const & dir) [pure virtual], [noexcept]
```

Mount a given file object at the given global path in the VFS.

Parameters

<i>path</i>	The global path to mount <i>dir</i> at.
<i>dir</i>	A pointer to the file/directory object that shall be mounted at <i>path</i> .

Returns

0 on success, or <0 on error.

References [mount\(\)](#).

Referenced by [mount\(\)](#), and [mount\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.342.2.5 set_fd()**

```

virtual cxx::Pair< cxx::Ref_ptr< File >, int > L4Re::Vfs::Fs::set_fd (
    int fd,
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil) [pure virtual], [noexcept]
  
```

Set the file object referenced by the file descriptor *fd*.

Parameters

<i>fd</i>	The file descriptor to set to <i>f</i> .
-----------	--

<i>f</i>	The file object to assign.
----------	----------------------------

Returns

A pair of a pointer to the file object that was previously assigned to `fd` (`first`) and a return value (`second`). `second` contains `-#EBADF` if the passed file descriptor is outside the valid range. `first` contains a `Nil` pointer in that case. On success, `second` contains 0.

The documentation for this class was generated from the following files:

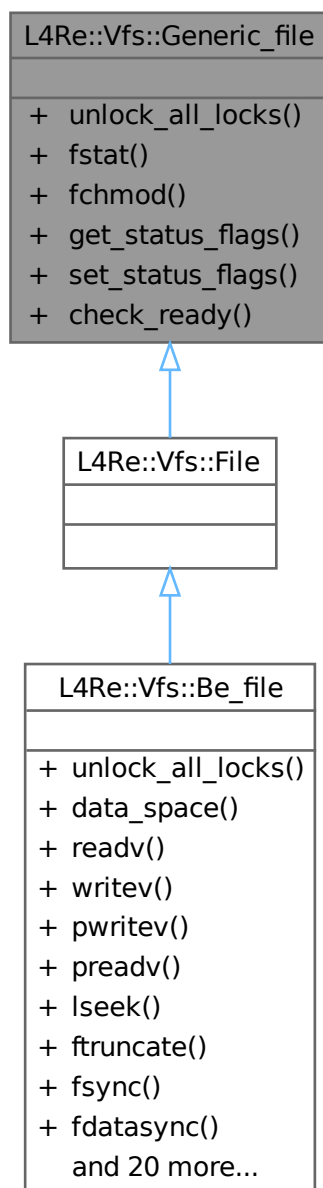

- `l4/l4re_vfs/vfs.h`
- `l4/l4re_vfs/impl/vfs_impl.h`

16.343 L4Re::Vfs::Generic_file Class Reference

The common interface for an open POSIX file.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Generic_file:

L4Re::Vfs::Generic_file
<ul style="list-style-type: none"> + unlock_all_locks() + fstat() + fchmod() + get_status_flags() + set_status_flags() + check_ready()

Public Types

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

Public Member Functions

- virtual int [unlock_all_locks](#) () noexcept=0
Unlock all locks on the file.
- virtual int [fstat](#) (struct stat64 *buf) const noexcept=0
Get status information for the file.
- virtual int [fchmod](#) (mode_t) noexcept=0
Change POSIX access rights on the file.
- virtual int [get_status_flags](#) () const noexcept=0
Get file status flags (fcntl F_GETFL).
- virtual int [set_status_flags](#) (long flags) noexcept=0
Set file status flags (fcntl F_SETFL).
- virtual bool [check_ready](#) ([Ready_type](#) rt) noexcept=0
Check whether the file is ready for an I/O operation/condition.

16.343.1 Detailed Description

The common interface for an open POSIX file.

This interface is common to all kinds of open files, independent of the file type (e.g., directory, regular file etc.). However, in the [L4Re::Vfs](#) the interface [File](#) is used for every real object.

See also

[L4Re::Vfs::File](#) for more information.

Definition at line 52 of file [vfs.h](#).

16.343.2 Member Enumeration Documentation

16.343.2.1 Ready_type

```
enum L4Re::Vfs::Generic_file::Ready_type : unsigned
```

Type of I/O operation/condition a file can indicate readiness.

As defined by select() and similar functions.

Definition at line 60 of file [vfs.h](#).

16.343.3 Member Function Documentation

16.343.3.1 check_ready()

```
virtual bool L4Re::Vfs::Generic_file::check_ready (
    Ready_type rt) [pure virtual], [noexcept]
```

Check whether the file is ready for an I/O operation/condition.

This method is used by the implementation of select() and similar functions.

Parameters

<i>rt</i>	Type of the I/O operation/condition to be ready, as defined by the select() and similar functions (Read, Write, Exception).
-----------	---

Return values

<i>true</i>	The file is ready for the given type of I/O operation/condition.
<i>false</i>	The file is not ready for the given type of I/O operation/condition.

Implemented in [L4Re::Vfs::Be_file](#).

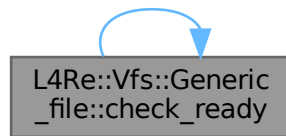

References [check_ready\(\)](#).

Referenced by [check_ready\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.343.3.2 fchmod()

```
virtual int L4Re::Vfs::Generic_file::fchmod (
    mode_t ) [pure virtual], [noexcept]
```

Change POSIX access rights on the file.

Backend for POSIX chmod and fchmod.

Implemented in [L4Re::Vfs::Be_file](#).

References [fchmod\(\)](#).

Referenced by [fchmod\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.343.3.3 fstat()

```
virtual int L4Re::Vfs::Generic_file::fstat (  
    struct stat64 * buf) const [pure virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

out	<i>buf</i>	This buffer is filled with the status information.
-----	------------	--

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [fstat\(\)](#).

Referenced by [fstat\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.343.3.4 get_status_flags()

```
virtual int L4Re::Vfs::Generic_file::get_status_flags () const [pure virtual], [noexcept]
```

Get file status flags (fcntl F_GETFL).

This function is used by the fcntl implementation for the F_GETFL command.

Returns

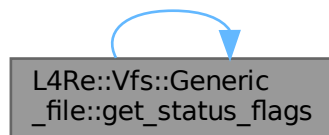

flags such as O_RDONLY, O_WRONLY, O_RDWR, O_DIRECT, O_ASYNC, O_NOATIME, O_NONBLOCK, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

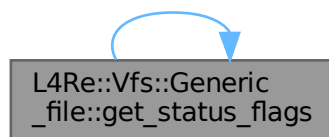

References [get_status_flags\(\)](#).

Referenced by [get_status_flags\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.343.3.5 set_status_flags()

```
virtual int L4Re::Vfs::Generic_file::set_status_flags (
    long flags) [pure virtual], [noexcept]
```

Set file status flags (fcntl F_SETFL).

This function is used by the fcntl implementation for the F_SETFL command.

Parameters

<i>flags</i>	The file status flags to set. This must be a combination of O_RDONLY, O_WRONLY, O_RDWR, O_APPEND, O_ASYNC, O_DIRECT, O_NOATIME, O_NONBLOCK.
--------------	---

Note

Creation flags such as O_CREAT, O_EXCL, O_NOCTTY, O_TRUNC are ignored.

Returns

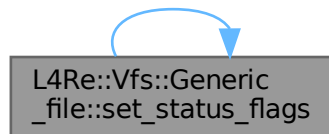

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [set_status_flags\(\)](#).

Referenced by [set_status_flags\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.343.3.6 unlock_all_locks()

```
virtual int L4Re::Vfs::Generic_file::unlock_all_locks () [pure virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

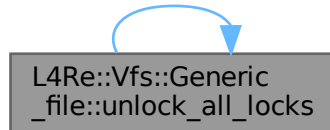

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [unlock_all_locks\(\)](#).

Referenced by [unlock_all_locks\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- `l4/l4re_vfs/vfs.h`

16.344 L4Re::Vfs::Mman Class Reference

Interface for POSIX memory management.

Collaboration diagram for L4Re::Vfs::Mman:

Public Member Functions

- virtual int **mmap2** (void *start, size_t len, int prot, int flags, int fd, off_t offset, void **ptr) noexcept=0
Backend for the mmap2 system call.
- virtual int **munmap** (void *start, size_t len) noexcept=0
Backend for the munmap system call.
- virtual int **mremap** (void *old, size_t old_sz, size_t new_sz, int flags, void **new_addr) noexcept=0
Backend for the mremap system call.
- virtual int **mprotect** (const void *a, size_t sz, int prot) noexcept=0
Backend for the mprotect system call.
- virtual int **msync** (void *addr, size_t len, int flags) noexcept=0
Backend for the msync system call.
- virtual int **madvise** (void *addr, size_t len, int advice) noexcept=0
Backend for the madvise system call.

16.344.1 Detailed Description

Interface for POSIX memory management.

Note

This interface usually exists as a singleton and as a superclass of [L4Re::Vfs::Ops](#).

An implementation for this interface is in [l4/l4re_vfs/impl/vfs_impl.h](#) and used by the l4re_vfs library or by the VFS implementation in ldso.

Definition at line 773 of file [vfs.h](#).

The documentation for this class was generated from the following file:

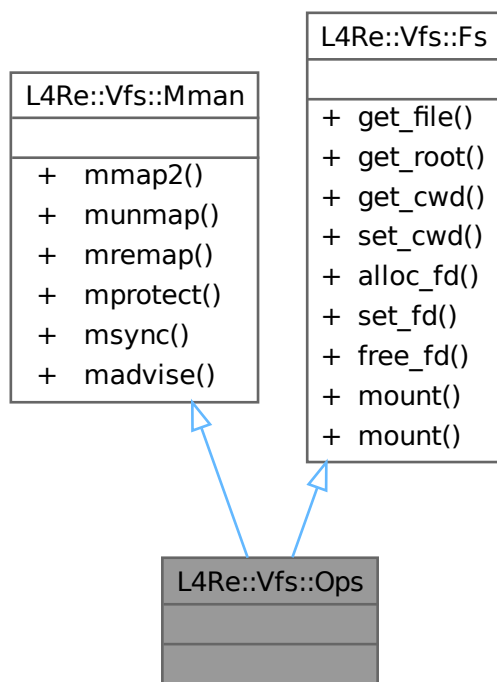

- l4/l4re_vfs/vfs.h

16.345 L4Re::Vfs::Ops Class Reference

Interface for the POSIX backends of an application.

```
#include <vfs.h>
```

Collaboration diagram for L4Re::Vfs::Ops:

Additional Inherited Members

Public Member Functions inherited from L4Re::Vfs::Mman

- virtual int **mmap2** (void *start, size_t len, int prot, int flags, int fd, off_t offset, void **ptr) noexcept=0
Backend for the mmap2 system call.
- virtual int **munmap** (void *start, size_t len) noexcept=0
Backend for the munmap system call.
- virtual int **mremap** (void *old, size_t old_sz, size_t new_sz, int flags, void **new_addr) noexcept=0
Backend for the mremap system call.
- virtual int **mprotect** (const void *a, size_t sz, int prot) noexcept=0
Backend for the mprotect system call.
- virtual int **msync** (void *addr, size_t len, int flags) noexcept=0
Backend for the msync system call.
- virtual int **madvise** (void *addr, size_t len, int advice) noexcept=0
Backend for the madvice system call.

Public Member Functions inherited from L4Re::Vfs::Fs

- virtual [cxx::Ref_ptr](#)< [File](#) > [get_file](#) (int fd) noexcept=0
Get the [L4Re::Vfs::File](#) for the file descriptor fd.

- virtual `cxx::Ref_ptr< File > get_root ()` noexcept=0
Get the directory object for the application's root directory.
- virtual `cxx::Ref_ptr< File > get_cwd ()` noexcept
Get the directory object for the application's current working directory.
- virtual void `set_cwd (cxx::Ref_ptr< File > const &)` noexcept
Set the current working directory for the application.
- virtual int `alloc_fd (cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil)` noexcept=0
Allocate the next free file descriptor.
- virtual `cxx::Pair< cxx::Ref_ptr< File >, int > set_fd (int fd, cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil)` noexcept=0
Set the file object referenced by the file descriptor fd.
- virtual `cxx::Ref_ptr< File > free_fd (int fd)` noexcept=0
Free the file descriptor fd.
- virtual int `mount (char const *path, cxx::Ref_ptr< File > const &dir)` noexcept=0
Mount a given file object at the given global path in the VFS.
- int `mount (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data)` noexcept
Backend for the POSIX mount call.

16.345.1 Detailed Description

Interface for the POSIX backends of an application.

Note

There usually exists a single instance of this interface available via `L4Re::Vfs::vfs_ops` that is used for all kinds of C-Library functions.

Definition at line 1109 of file `vfs.h`.

The documentation for this class was generated from the following file:

- `l4/l4re_vfs/vfs.h`

16.346 L4Re::Vfs::Regular_file Class Reference

Interface for a POSIX file that provides regular file semantics.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Regular_file:

Collaboration diagram for L4Re::Vfs::Regular_file:

L4Re::Vfs::Regular_file
<ul style="list-style-type: none"> + data_space() + readv() + writev() + lseek() + ftruncate() + fsync() + fdatasync() + get_lock() + set_lock()

Public Member Functions

- virtual [L4::Cap](#)< [L4Re::Dataspace](#) > [data_space](#) () noexcept=0
Get an [L4Re::Dataspace](#) object for the file.
- virtual ssize_t [readv](#) (const struct iovec *, int iovcnt) noexcept=0
Read one or more blocks of data from the file.
- virtual ssize_t [writev](#) (const struct iovec *, int iovcnt) noexcept=0
Write one or more blocks of data to the file.
- virtual off64_t [lseek](#) (off64_t, int) noexcept=0
Change the file pointer.
- virtual int [ftruncate](#) (off64_t pos) noexcept=0
Truncate the file at the given position.
- virtual int [fsync](#) () const noexcept=0
Sync the data and meta data to persistent storage.
- virtual int [fdatasync](#) () const noexcept=0
Sync the data to persistent storage.
- virtual int [get_lock](#) (struct flock64 *lock) noexcept=0
Test if the given lock can be placed in the file.
- virtual int [set_lock](#) (struct flock64 *lock, bool wait) noexcept=0
Acquire or release the given lock on the file.

16.346.1 Detailed Description

Interface for a POSIX file that provides regular file semantics.

Real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line 287 of file [vfs.h](#).

16.346.2 Member Function Documentation

16.346.2.1 data_space()

```
virtual L4::Cap< L4Re::Dataspace > L4Re::Vfs::Regular_file::data_space () [pure virtual],  
[noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implemented in [L4Re::Vfs::Be_file](#).

16.346.2.2 fdatsync()

```
virtual int L4Re::Vfs::Regular_file::fdatsync () const [pure virtual], [noexcept]
```

Sync the data to persistent storage.

This is the backend for POSIX fdatsync.

Implemented in [L4Re::Vfs::Be_file](#).

References [fdatsync\(\)](#).

Referenced by [fdatsync\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.346.2.3 fsync()

```
virtual int L4Re::Vfs::Regular_file::fsync () const [pure virtual], [noexcept]
```

Sync the data and meta data to persistent storage.

This is the backend for POSIX fsync.

Implemented in [L4Re::Vfs::Be_file](#).

References [fsync\(\)](#).

Referenced by [fsync\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.346.2.4 ftruncate()

```
virtual int L4Re::Vfs::Regular_file::ftruncate (  
    off64_t pos) [pure virtual], [noexcept]
```

Truncate the file at the given position.

This function is the backend for truncate and friends.

Parameters

<i>pos</i>	The offset at which the file shall be truncated.
------------	--

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [ftruncate\(\)](#).

Referenced by [ftruncate\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.346.2.5 get_lock()**

```
virtual int L4Re::Vfs::Regular_file::get_lock (
    struct flock64 * lock) [pure virtual], [noexcept]
```

Test if the given lock can be placed in the file.

This function is used as backend for fcntl F_GETLK commands.

Parameters

<i>lock</i>	The lock that shall be placed on the file. The <i>l_type</i> member will contain <code>F_UNLCK</code> if the lock could be placed.
-------------	--

Returns

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [get_lock\(\)](#).

Referenced by [get_lock\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.346.2.6 lseek()

```
virtual off64_t L4Re::Vfs::Regular_file::lseek (
    off64_t ,
    int ) [pure virtual], [noexcept]
```

Change the file pointer.

This is the backend for POSIX seek, lseek and friends.

Returns

The new file position, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [lseek\(\)](#).

Referenced by [lseek\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.346.2.7 readv()

```
virtual ssize_t L4Re::Vfs::Regular_file::readv (  
    const struct iovec * ,  
    int iovcnt) [pure virtual], [noexcept]
```

Read one or more blocks of data from the file.

This function acts as backend for POSIX `read` and `readv` calls and reads data starting from the `f_pos` pointer of that open file. The file pointer is advanced according to the number of bytes read.

Returns

The number of bytes read from the file, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

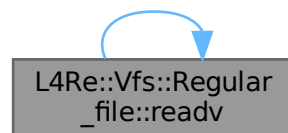

References [readv\(\)](#).

Referenced by [readv\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.346.2.8 set_lock()**

```
virtual int L4Re::Vfs::Regular_file::set_lock (
    struct flock64 * lock,
    bool wait) [pure virtual], [noexcept]
```

Acquire or release the given lock on the file.

This function is used as backend for fcntl F_SETLK and F_SETLKW commands.

Parameters

<i>lock</i>	The lock that shall be placed on the file.
-------------	--

<i>wait</i>	If true, then block if there is a conflicting lock on the file.
-------------	---

Returns

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

References [set_lock\(\)](#).

Referenced by [set_lock\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.346.2.9 writev()**

```
virtual ssize_t L4Re::Vfs::Regular_file::writev (
    const struct iovec * ,
    int iovcnt) [pure virtual], [noexcept]
```

Write one or more blocks of data to the file.

This function acts as backend for POSIX write and writev calls. The data is written starting at the current file pointer and the file pointer must be advanced according to the number of written bytes.

Returns

The number of bytes written to the file, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

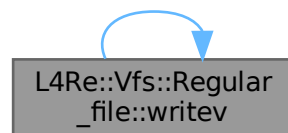

References [writev\(\)](#).

Referenced by [writev\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

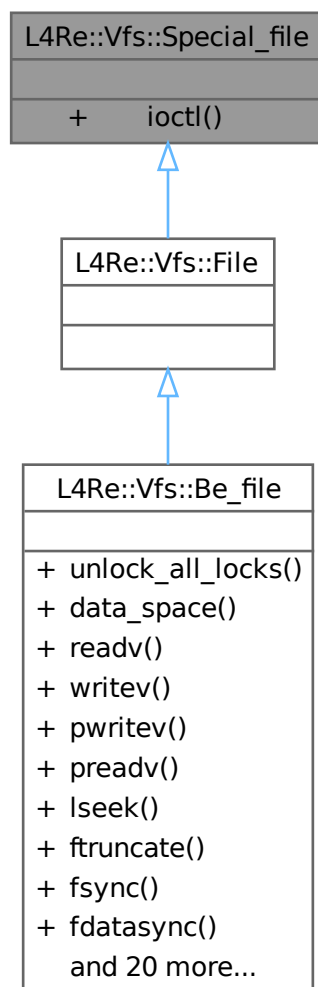

- `l4/l4re_vfs/vfs.h`

16.347 L4Re::Vfs::Special_file Class Reference

Interface for a POSIX file that provides special file semantics.

```

Inheritance diagram for L4Re::Vfs::Special_file:

Collaboration diagram for L4Re::Vfs::Special_file:

Public Member Functions

- virtual int [ioctl](#) (unsigned long cmd, va_list args) noexcept=0
The famous IO control.

16.347.1 Detailed Description

Interface for a POSIX file that provides special file semantics.

Real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line [420](#) of file [vfs.h](#).

16.347.2 Member Function Documentation

16.347.2.1 ioctl()

```
virtual int L4Re::Vfs::Special_file::ioctl (  
    unsigned long cmd,  
    va_list args) [pure virtual], [noexcept]
```

The famous IO control.

Backend for POSIX generic object invocation ioctl.

Parameters

<i>cmd</i>	The ioctl command.
<i>args</i>	The arguments for the ioctl, usually some kind of pointer.

Returns

>=0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

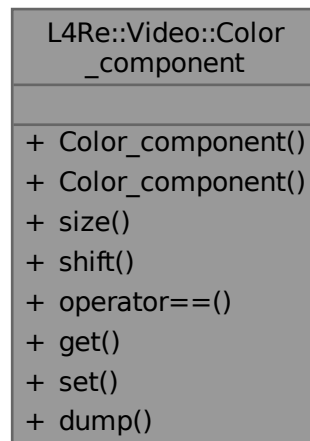

- [l4/l4re_vfs/vfs.h](#)

16.348 L4Re::Video::Color_component Class Reference

A color component.

```
#include <colors>
```

Collaboration diagram for L4Re::Video::Color_component:

Public Member Functions

- **Color_component ()**
Constructor.
- **Color_component** (unsigned char bits, unsigned char shift)
Constructor.
- unsigned char **size** () const
Return the number of bits used by the component.
- unsigned char **shift** () const
Return the position of the component in the pixel.
- bool **operator==** (**Color_component** const &o) const
Compare for equality.
- int **get** (unsigned long v) const
Get component from value (normalized to 16bits).
- long unsigned **set** (int v) const
Transform 16bit normalized value to the component in the color space.
- template<typename OUT>
void **dump** (OUT &s) const
Dump information on the view information to a stream.

16.348.1 Detailed Description

A color component.

Definition at line 21 of file [colors](#).

16.348.2 Constructor & Destructor Documentation

16.348.2.1 Color_component()

```
L4Re::Video::Color_component::Color_component (
    unsigned char bits,
    unsigned char shift) [inline]
```

Constructor.

Parameters

<i>bits</i>	Number of bits used by the component
<i>shift</i>	Position in bits of the component in the pixel

Definition at line 36 of file [colors](#).

References [shift\(\)](#).

Here is the call graph for this function:

16.348.3 Member Function Documentation

16.348.3.1 dump()

```
template<typename OUT>
void L4Re::Video::Color_component::dump (
    OUT & s) const [inline]
```

Dump information on the view information to a stream.

Parameters

<i>s</i>	Stream
----------	--------

Definition at line 81 of file [colors](#).

References [shift\(\)](#), and [size\(\)](#).

Here is the call graph for this function:

16.348.3.2 get()

```
int L4Re::Video::Color_component::get (  
    unsigned long v) const [inline]
```

Get component from value (normalized to 16bits).

Parameters

v	Value
---	-------

Returns

Converted value

Definition at line 63 of file [colors](#).

16.348.3.3 operator==()

```
bool L4Re::Video::Color_component::operator== (  
    Color_component const & o) const [inline]
```

Compare for equality.

Returns

True if the same components are described, false if not.

Definition at line 55 of file [colors](#).

References [Color_component\(\)](#).

Here is the call graph for this function:

**16.348.3.4 set()**

```
long unsigned L4Re::Video::Color_component::set (
    int v) const [inline]
```

Transform 16bit normalized value to the component in the color space.

Parameters

<i>v</i>	Value return Converted value.
----------	-------------------------------

Definition at line 73 of file [colors](#).

16.348.3.5 shift()

```
unsigned char L4Re::Video::Color_component::shift () const [inline]
```

Return the position of the component in the pixel.

Returns

Position in bits of the component in the pixel

Definition at line 49 of file [colors](#).

Referenced by [Color_component\(\)](#), and [dump\(\)](#).

Here is the caller graph for this function:

16.348.3.6 `size()`

```
unsigned char L4Re::Video::Color_component::size () const [inline]
```

Return the number of bits used by the component.

Returns

Number of bits used by the component

Definition at line 43 of file [colors](#).

Referenced by [dump\(\)](#).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

16.349 L4Re::Video::Goos Class Reference

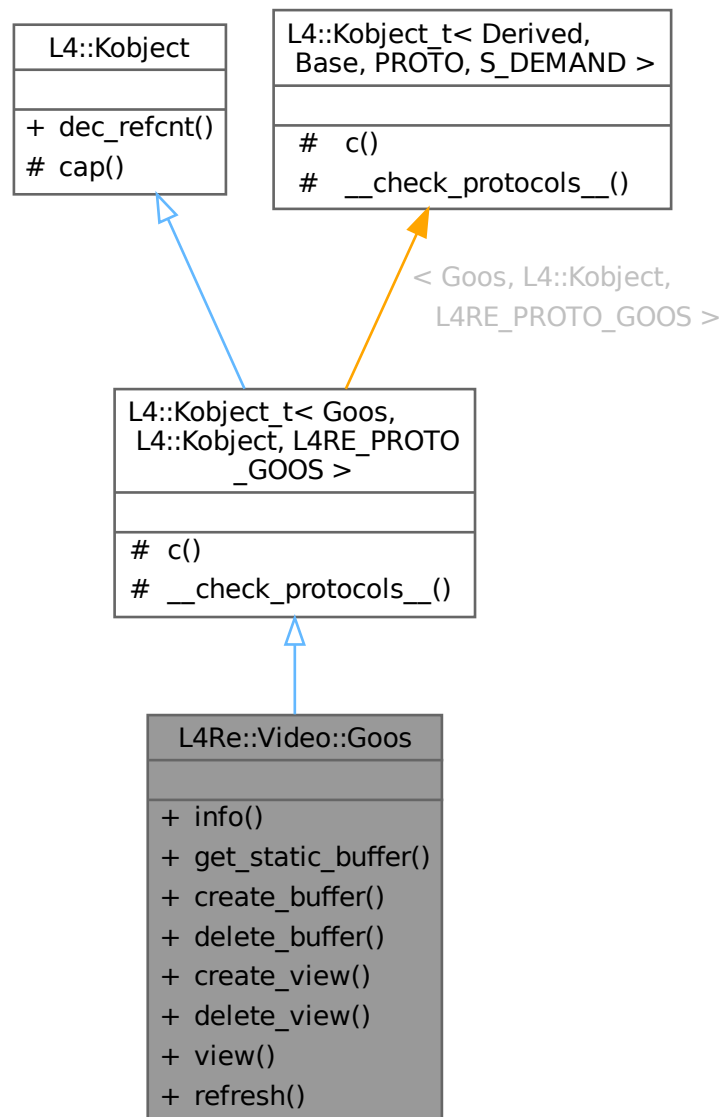

Class that abstracts framebuffers.

```
#include <goos>
```

Inheritance diagram for L4Re::Video::Goos:

Collaboration diagram for L4Re::Video::Goos:

Data Structures

- struct [Info](#)

Information structure of a [Goos](#).

Public Types

- enum [Flags](#) { [F_auto_refresh](#) = 0x01 , [F_pointer](#) = 0x02 , [F_dynamic_views](#) = 0x04 , [F_dynamic_buffers](#) = 0x08 }

[Flags](#) for a [Goos](#).

Public Member Functions

- long **info** (Info *info)
Return the Goos information of the Goos.
- long **get_static_buffer** (unsigned idx, L4::lpc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
Return a static buffer of a Goos.
- long **create_buffer** (unsigned long size, L4::lpc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
Create a buffer.
- long **delete_buffer** (unsigned idx)
Delete a buffer.
- int **create_view** (View *view, l4_utcb_t *utcb=l4_utcb()) const noexcept
Create a view.
- int **delete_view** (View const &v, l4_utcb_t *utcb=l4_utcb()) const noexcept
Delete a view.
- View **view** (unsigned index) const noexcept
Return a view.
- long **refresh** (int x, int y, int w, int h)
Trigger refreshing of the given area on the virtual screen.

Public Member Functions inherited from L4::Kobject

- l4_msgtag_t **dec_refcnt** (l4_mword_t diff, l4_utcb_t *utcb=l4_utcb())
Decrement the in kernel reference counter for the object.

Additional Inherited Members

Protected Types inherited from

L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- typedef Goos **Class**
The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO, Goos > **__Iface**
The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, typename L4::Kobject::__Iface_list > **__Iface_list**
The list of all RPC interfaces provided directly or through inheritance.

Protected Member Functions inherited from

L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- L4::Cap< Class > **c** () const noexcept
Get the capability to ourselves.

Protected Member Functions inherited from L4::Kobject

- l4_cap_idx_t **cap** () const noexcept
Return capability selector.

Static Protected Member Functions inherited from [L4::Kobject_t](#)< [Goos](#), [L4::Kobject](#), [L4RE_PROTO_GOOS](#) >

- static void `__check_protocols__()` noexcept
Helper to check for protocol conflicts.

16.349.1 Detailed Description

[Class](#) that abstracts framebuffer.

A framebuffer is the pixel data that is displayed on a screen and a [Goos](#) object lets the user manipulate that data. A [Goos](#) makes use of two kinds of objects:

- Buffers in the form of [L4Re::Dataspace](#) objects. These hold the bytes for the pixel data.
- [L4Re::Video::View](#) objects.

Both can either be static, that is their number and configuration is fixed and determined by the framebuffer, or they can be dynamic, with the user allocating them.

Definition at line [223](#) of file [goos](#).

16.349.2 Member Enumeration Documentation

16.349.2.1 Flags

enum [L4Re::Video::Goos::Flags](#)

[Flags](#) for a [Goos](#).

Enumerator

<code>F_auto_refresh</code>	The graphics display is automatically refreshed.
<code>F_pointer</code>	We have a mouse pointer.
<code>F_dynamic_views</code>	Supports dynamically allocated views.
<code>F_dynamic_buffers</code>	Supports dynamically allocated buffers.

Definition at line [228](#) of file [goos](#).

16.349.3 Member Function Documentation

16.349.3.1 `create_buffer()`

```
long L4Re::Video::Goos::create_buffer (
    unsigned long size,
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
```

Create a buffer.

Parameters

<i>size</i>	Size of buffer in bytes.
<i>rbuf</i>	Capability slot to point the buffer dataspace to.

Return values

≥ 0	Success, the value returned is the buffer index.
< 0	Error

Referenced by [get_static_buffer\(\)](#).

Here is the caller graph for this function:

16.349.3.2 create_view()

```
int L4Re::Video::Goos::create_view (
    View * view,
    l4_utcb_t * utcb = l4_utcb()) const [inline], [noexcept]
```

Create a view.

Parameters

out	<i>view</i>	A view object.
	<i>utcb</i>	UTCB of the caller. This is a default parameter.

Return values

≥ 0	Success, the value returned is the view index.
< 0	Error

Definition at line 312 of file [goos](#).

16.351.1 Detailed Description

Pixel information.

This class wraps the information on a pixel, such as the size and position of each color component in the pixel.

Definition at line 94 of file [colors](#).

16.351.2 Constructor & Destructor Documentation

16.351.2.1 Pixel_info() [1/2]

```
L4Re::Video::Pixel_info::Pixel_info (  
    unsigned char bpp,  
    char r,  
    char rs,  
    char g,  
    char gs,  
    char b,  
    char bs,  
    char a = 0,  
    char as = 0) [inline]
```

Constructor.

Parameters

<i>bpp</i>	Size of pixel in bytes.
<i>r</i>	Red component size.
<i>rs</i>	Red component shift.
<i>g</i>	Green component size.
<i>gs</i>	Green component shift.
<i>b</i>	Blue component size.
<i>bs</i>	Blue component shift.
<i>a</i>	Alpha component size, defaults to 0.
<i>as</i>	Alpha component shift, defaults to 0.

16.351.3 Member Function Documentation

16.351.3.1 `a()` [1/2]

```
Color_component const & L4Re::Video::Pixel_info::a () const [inline]
```

Return the alpha color compoment of the pixel.

Returns

Alpha color component.

Definition at line 123 of file `colors`.

Referenced by `dump()`, and `Pixel_info()`.

Here is the caller graph for this function:

16.351.3.2 `a()` [2/2]

```
void L4Re::Video::Pixel_info::a (
    Color_component const & c) [inline]
```

Set the alpha color component of the pixel.

Parameters

<code>c</code>	Alpha color component.
----------------	------------------------

Definition at line 187 of file `colors`.

16.351.3.3 b() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::b () const [inline]
```

Return the blue color compoment of the pixel.

Returns

Blue color component.

Definition at line 117 of file [colors](#).

Referenced by [dump\(\)](#), and [Pixel_info\(\)](#).

Here is the caller graph for this function:

16.351.3.4 b() [2/2]

```
void L4Re::Video::Pixel_info::b (  
    Color_component const & c) [inline]
```

Set the blue color component of the pixel.

Parameters

<code>c</code>	Blue color component.
----------------	-----------------------

Definition at line 181 of file [colors](#).

16.351.3.5 bits_per_pixel()

```
unsigned char L4Re::Video::Pixel_info::bits_per_pixel () const [inline]
```

Number of bits of the pixel.

Returns

Number of bits used by the pixel.

Definition at line 156 of file [colors](#).

Referenced by [Pixel_info\(\)](#).

Here is the caller graph for this function:

16.351.3.6 bytes_per_pixel() [1/2]

```
unsigned char L4Re::Video::Pixel_info::bytes_per_pixel () const [inline]
```

Query size of pixel in bytes.

Returns

Size of pixel in bytes.

Definition at line 150 of file [colors](#).

Referenced by [dump\(\)](#).

Here is the caller graph for this function:

16.351.3.7 bytes_per_pixel() [2/2]

```
void L4Re::Video::Pixel_info::bytes_per_pixel (  
    unsigned char bpp) [inline]
```

Set the size of the pixel in bytes.

Parameters

<i>bpp</i>	Size of pixel in bytes.
------------	-------------------------

Definition at line 193 of file [colors](#).

16.351.3.8 dump()

```
template<typename OUT>
void L4Re::Video::Pixel_info::dump (
    OUT & s) const [inline]
```

Dump information on the pixel to a stream.

Parameters

<i>s</i>	Stream
----------	--------

Definition at line 246 of file [colors](#).

References [a\(\)](#), [b\(\)](#), [bytes_per_pixel\(\)](#), [g\(\)](#), and [r\(\)](#).

Here is the call graph for this function:

16.351.3.9 g() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::g () const [inline]
```

Return the green color component of the pixel.

Returns

Green color component.

Definition at line 111 of file [colors](#).

Referenced by [dump\(\)](#), and [Pixel_info\(\)](#).

Here is the caller graph for this function:

**16.351.3.10 g() [2/2]**

```
void L4Re::Video::Pixel_info::g (
    Color_component const & c) [inline]
```

Set the green color component of the pixel.

Parameters

<code>c</code>	Green color component.
----------------	------------------------

Definition at line 175 of file [colors](#).

16.351.3.11 has_alpha()

```
bool L4Re::Video::Pixel_info::has_alpha () const [inline]
```

Return whether the pixel has an alpha channel.

Returns

True if the pixel has an alpha channel, false if not.

Definition at line 163 of file [colors](#).

16.351.3.12 operator==()

```
bool L4Re::Video::Pixel_info::operator== (
    Pixel_info const & o) const [inline]
```

Compare for complete equality of the color space.

Parameters

<i>o</i>	A Pixel_info to compare to.
----------	---

Returns

true if the both [Pixel_info](#)'s are equal, false if not.

Definition at line 236 of file [colors](#).

References [Pixel_info\(\)](#).

Here is the call graph for this function:

16.351.3.13 padding()

```
Color_component const L4Re::Video::Pixel_info::padding () const [inline]
```

Compute the padding pseudo component.

The padding pseudo component represents the tailing bits that are reserved in RGB32 and similar pixel formats.

Returns

Padding pseudo component.

Definition at line 131 of file [colors](#).

16.351.3.14 `r()` [1/2]

```
Color_component const & L4Re::Video::Pixel_info::r () const [inline]
```

Return the red color component of the pixel.

Returns

Red color component.

Definition at line 105 of file [colors](#).

Referenced by [dump\(\)](#), and [Pixel_info\(\)](#).

Here is the caller graph for this function:

**16.351.3.15** `r()` [2/2]

```
void L4Re::Video::Pixel_info::r (
    Color_component const & c) [inline]
```

Set the red color component of the pixel.

Parameters

<code>c</code>	Red color component.
----------------	----------------------

Definition at line 169 of file [colors](#).

[F_none](#) = 0x00 , [F_set_buffer](#) = 0x01 , [F_set_buffer_offset](#) = 0x02 , [F_set_bytes_per_line](#) = 0x04 ,
[F_set_pixel](#) = 0x08 , [F_set_position](#) = 0x10 , [F_dyn_allocated](#) = 0x20 , [F_set_background](#) = 0x40 ,
[F_set_flags](#) = 0x80 , [F_fully_dynamic](#) }
Flags on a view.
- enum [V_flags](#) { [F_above](#) = 0x1000 , [F_flags_mask](#) = 0xff000 }
Property flags of a view.

Public Member Functions

- int [info](#) ([Info](#) *info) const noexcept
Return the view information of the view.
- int [set_info](#) ([Info](#) const &info) const noexcept
Set the information structure for this view.
- int [set_viewport](#) (int scr_x, int scr_y, int w, int h, unsigned long buf_offset) const noexcept
Set the position of the view in the [Goos](#).

- int [stack](#) ([View](#) const &pivot, bool behind=true) const noexcept
Move this view in the view stack.
- int [push_top](#) () const noexcept
Make this view the top-most view.
- int [push_bottom](#) () const noexcept
Push this view the back.
- int [refresh](#) (int x, int y, int w, int h) const noexcept
Refresh/Redraw the view.
- bool [valid](#) () const
Return whether this view is valid.

16.352.1 Detailed Description

[View](#) of a framebuffer.

A view is a rectangular subset of a framebuffer managed by a [Goos](#) object. The [Goos](#) orders multiple views in a stack which determines which view is on top in case they overlap. The view's pixel data is provided by a backing buffer, which must belong to the [Goos](#). It can be static or dynamically allocated, depending on the framebuffer.

See also

[L4Re::Video::Goos](#)

Definition at line 39 of file [goos](#).

16.352.2 Member Enumeration Documentation

16.352.2.1 Flags

enum [L4Re::Video::View::Flags](#)

[Flags](#) on a view.

Enumerator

F_none	everything for this view is static (the VESA-FB case)
F_set_buffer	buffer object for this view can be changed
F_set_buffer_offset	buffer offset can be set
F_set_bytes_per_line	bytes per line can be set
F_set_pixel	pixel type can be set
F_set_position	position on screen can be set
F_dyn_allocated	View is dynamically allocated.
F_set_background	Set view as background for session.

<code>F_set_flags</code>	Set view flags (. See also V_flags)
<code>F_fully_dynamic</code>	Flags for a fully dynamic view.

Definition at line 59 of file [goos](#).

16.352.2.2 V_flags

```
enum L4Re::Video::View::V_flags
```

Property flags of a view.

Such flags can be set or deleted with the [F_set_flags](#) operation using the [set_info\(\)](#) method.

Enumerator

<code>F_above</code>	Flag the view as stay on top.
<code>F_flags_mask</code>	Mask containing all possible property flags.

Definition at line 82 of file [goos](#).

16.352.3 Member Function Documentation

16.352.3.1 info()

```
int L4Re::Video::View::info (
    Info * info) const [inline], [noexcept]
```

Return the view information of the view.

Parameters

out	<i>info</i>	Information structure pointer.
-----	-------------	--------------------------------

Return values

0	Success
<0	Error

Definition at line 367 of file [goos](#).

References [info\(\)](#).

```

int L4Re::Video::View::refresh (
    int x,
    int y,
    int w,
    int h) const [inline], [noexcept]
  
```

Refresh/Redraw the view.

Parameters

<i>x</i>	X position.
<i>y</i>	Y position.
<i>w</i>	Width.
<i>h</i>	Height.

Return values

0	Success
<0	Error

Definition at line [379](#) of file [goos](#).

16.352.3.3 set_info()

```
int L4Re::Video::View::set_info (  
    Info const & info) const [inline], [noexcept]
```

Set the information structure for this view.

Parameters

<i>info</i>	Information structure.
-------------	------------------------

Return values

0	Success
<0	Error

The function will also set the view port according to the values given in the information structure.

Definition at line 371 of file [goos](#).

16.353 L4Re::Video::View::Info Struct Reference

Information structure of a view.

```
#include <goos>
```

Collaboration diagram for L4Re::Video::View::Info:

Public Member Functions

- bool **has_static_buffer** () const
Return whether the view has a static buffer.
- bool **has_static_buffer_offset** () const
Return whether the static buffer offset is available.
- bool **has_set_buffer** () const

Return whether a buffer is set.

- bool **has_set_buffer_offset** () const

Return whether the given buffer offset is valid.

- bool **has_set_bytes_per_line** () const

Return whether the given bytes-per-line value is valid.

- bool **has_set_pixel** () const

Return whether the given pixel information is valid.

- bool **has_set_position** () const

Return whether the position information given is valid.

- template<typename OUT>

void **dump** (OUT &s) const

Dump information on the view information to a stream.

Data Fields

- unsigned **flags** = 0

Flags, see [Flags](#) and [V_flags](#).

- unsigned **view_index** = 0

Index of the view.

- unsigned long **xpos** = 0

X position in pixels of the view in the [Goos](#).

- unsigned long **ypos** = 0

Y position in pixels of the view in the [Goos](#).

- unsigned long **width** = 0

Width of the view in pixels.

- unsigned long **height** = 0

Height of the view in pixels.

- unsigned long **buffer_offset** = 0

Offset in the memory buffer in bytes.

- unsigned long **bytes_per_line** = 0

Bytes per line.

- [Pixel_info](#) **pixel_info**

Pixel information.

- unsigned **buffer_index** = 0

Number of the buffer used for this view.

    char const * n,
    l4_cap_idx_t c,
    l4_umword_t f = 0) [inline]
```

Create an entry with the name *n*, capability *c*, and flags *f*.

Parameters

<i>n</i>	is the name of the initial object.
<i>c</i>	is the capability selector that refers the initial object.
<i>f</i>	are the additional flags for the object.

Definition at line [70](#) of file [env.h](#).

References [cap](#), [flags](#), [L4_NOTHROW](#), and [name](#).

16.359.3 Field Documentation

16.359.3.1 `flags`

```
l4_umword_t l4re_env_cap_entry_t::flags
```

Flags for the object.

Note

Currently unused, except as an end marker for the entry list.

Definition at line [50](#) of file [env.h](#).

Referenced by [l4re_env_cap_entry_t\(\)](#), [l4re_env_cap_entry_t\(\)](#), and [l4re_env_get_cap_l\(\)](#).

The documentation for this struct was generated from the following file:

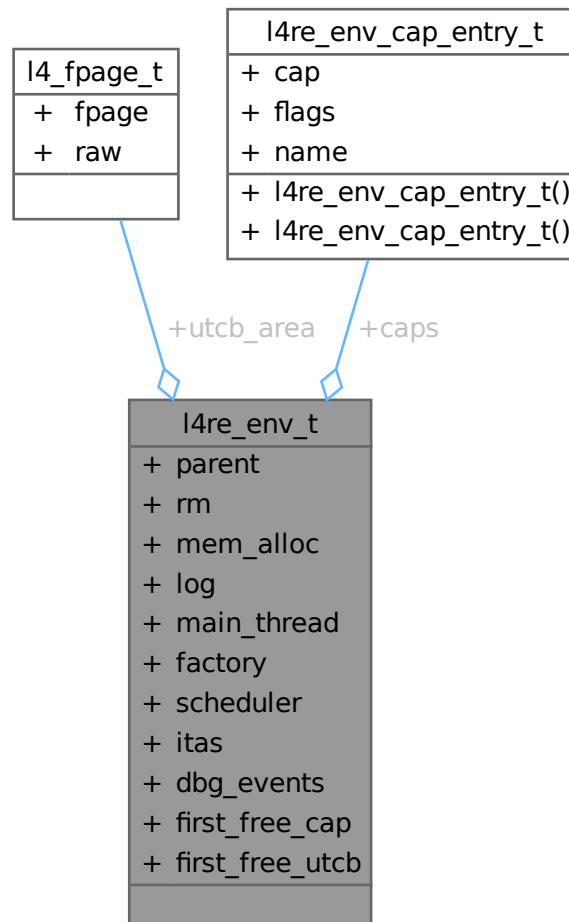

- [l4re/env.h](#)

16.360 l4re_env_t Struct Reference

Initial environment data structure.

```
#include <env.h>
```

Collaboration diagram for l4re_env_t:

Data Fields

- [l4_cap_idx_t](#) **parent**
Parent object-capability.
- [l4_cap_idx_t](#) **rm**
Region map object-capability.
- [l4_cap_idx_t](#) **mem_alloc**
Memory allocator object-capability.
- [l4_cap_idx_t](#) **log**
Logging object-capability.

- [l4_cap_idx_t](#) **main_thread**
Object-capability of the first user thread.
- [l4_cap_idx_t](#) **factory**
Object-capability of the factory available to the task.
- [l4_cap_idx_t](#) **scheduler**
Object capability for the scheduler set to use.
- [l4_cap_idx_t](#) **itas**
ITAS services object-capability.
- [l4_cap_idx_t](#) **dbg_events**
Object-capability of the debug events service.
- [l4_cap_idx_t](#) **first_free_cap**
First capability index available to the application.
- [l4_fpage_t](#) **utcb_area**
UTCB area of the task.
- [l4_addr_t](#) **first_free_utcb**
First UTCB within the UTCB area available to the application.
- [l4re_env_cap_entry_t](#) * **caps**
Pointer to the first entry in the initial objects array which contains [l4re_env_cap_entry_t](#) elements.

16.360.1 Detailed Description

Initial environment data structure.

See also

[Initial environment](#)

16.361 l4re_event_t Struct Reference

Event structure used in buffer.

```
#include <event.h>
```

Collaboration diagram for l4re_event_t:

Data Fields

- long long **time**
Time stamp of the event.
- unsigned short **type**
Type of the event.
- unsigned short **code**
Code of the event.
- int **value**
Value of the event.
- [l4_umword_t](#) **stream_id**
Stream ID.

16.361.1 Detailed Description

Event structure used in buffer.

Definition at line 30 of file [event.h](#).

The documentation for this struct was generated from the following file:

16.362 l4re_video_color_component_t Struct Reference

Color component structure.

```
#include <colors.h>
```

Collaboration diagram for l4re_video_color_component_t:

l4re_video_color_component_t	
+	size
+	shift

Data Fields

- unsigned char **size**
Size in bits.
- unsigned char **shift**
offset in pixel

16.362.1 Detailed Description

Color component structure.

Definition at line 20 of file [colors.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/colors.h](#)

16.363 l4re_video_goos_info_t Struct Reference

Goos information structure.

```
#include <goos.h>
```

Collaboration diagram for l4re_video_goos_info_t:

Data Fields

- unsigned long **width**
Width of the goos.
- unsigned long **height**
Height of the goos.
- unsigned **flags**
Flags of the framebuffer, see [l4re_video_goos_info_flags_t](#).
- unsigned **num_static_views**
Number of static views.
- unsigned **num_static_buffers**
Number of static buffers.
- [l4re_video_pixel_info_t](#) **pixel_info**
Pixel layout of the goos.

16.363.1 Detailed Description

Goos information structure.

Definition at line 41 of file [goos.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/goos.h](#)

16.364 l4re_video_pixel_info_t Struct Reference

Pixel_info structure.

```
#include <colors.h>
```

Collaboration diagram for l4re_video_pixel_info_t:

Data Fields

- [l4re_video_color_component_t a](#)
Colors.
- unsigned char **bytes_per_pixel**
Bytes per pixel.

16.364.1 Detailed Description

Pixel_info structure.

Definition at line 30 of file [colors.h](#).

The documentation for this struct was generated from the following file:

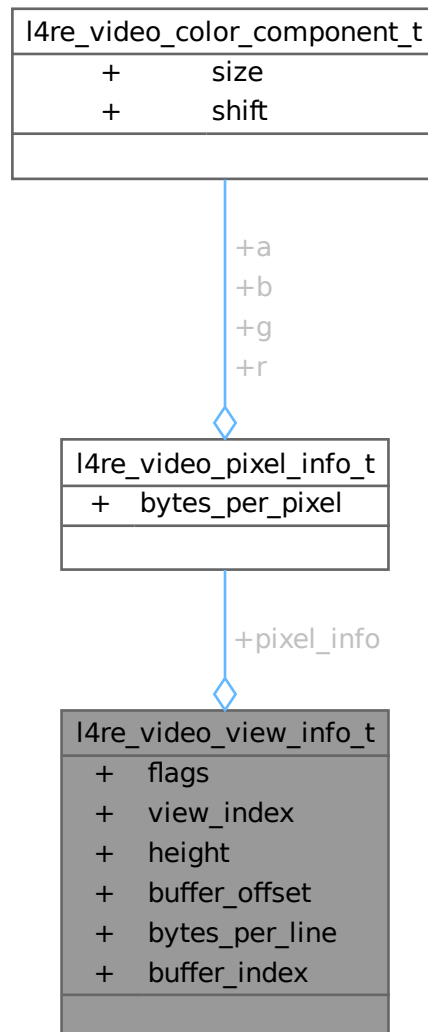

- [l4re/c/video/colors.h](#)

16.365 l4re_video_view_info_t Struct Reference

View information structure.

```
#include <view.h>
```

Collaboration diagram for l4re_video_view_info_t:

Data Fields

- unsigned **flags**
Flags.
- unsigned **view_index**
Number of view in the goos.
- unsigned long **height**
Position in goos and size of view.
- unsigned long **buffer_offset**
Memory offset in goos buffer.
- unsigned long **bytes_per_line**
Size of line in view.
- [l4re_video_pixel_info_t](#) **pixel_info**
Pixel info.
- unsigned **buffer_index**
Number of buffer of goos.

16.365.1 Detailed Description

View information structure.

Definition at line 49 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/view.h](#)

16.366 l4re_video_view_t Struct Reference

C representation of a goos view.

```
#include <view.h>
```

Collaboration diagram for `l4re_video_view_t`:

16.366.1 Detailed Description

C representation of a goos view.

A view is a visible rectangle that provides a view to the contents of a buffer (frame buffer) memory object and is placed on a real screen.

Definition at line 68 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/c/video/view.h](#)

16.367 l4shmc_ringbuf_head_t Struct Reference

Head field of a ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc_ringbuf_head_t:

l4shmc_ringbuf_head_t	
+	next_read
+	next_write
+	bytes_filled
+	sender_waits
+	data

Data Fields

- unsigned **next_read**
offset to next read packet
- unsigned **next_write**
offset to next write packet
- unsigned **bytes_filled**
bytes filled in buffer
- unsigned **sender_waits**
sender waiting?
- char **data** []
tail pointer -> data

16.367.1 Detailed Description

Head field of a ring buffer.

Definition at line 59 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

- [l4shmc/ringbuf.h](#)

16.368 l4shmc_ringbuf_t Struct Reference

Ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc_ringbuf_t:

Data Fields

- `l4shmc_area_t * _area`
L4SHM area this buffer is located in.
- `l4_cap_idx_t _owner`
owner (attached to send/recv signal)
- `l4shmc_chunk_t _chunk`
chunk descriptor
- `unsigned _size`
chunk size // XXX do we need this?
- `char * _chunkname`
name of the ring buffer chunk
- `char * _signame`
base name of the ring buffer signals
- `l4shmc_ringbuf_head_t * _addr`
pointer to ring buffer head
- `l4shmc_signal_t _signal_full`
"full" signal - triggered when data is produced
- `l4shmc_signal_t _signal_empty`
"empty" signal - triggered when data is consumed

16.368.1 Detailed Description

Ring buffer.

Definition at line 85 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

Data Fields

all VESA versions

- [l4_uint16_t mode_attributes](#)
Mode attributes.
- [l4_uint8_t win_a_attributes](#)
Window A attributes.

- [l4_uint8_t win_b_attributes](#)
Window B attributes.
- [l4_uint16_t win_granularity](#)
Window granularity.
- [l4_uint16_t win_size](#)
Window size.
- [l4_uint16_t win_a_segment](#)
Window A start segment.
- [l4_uint16_t win_b_segment](#)
Window B start segment.
- [l4_uint32_t win_func](#)
Real mode pointer to window function.
- [l4_uint16_t bytes_per_scanline](#)
Bytes per scan line.

>= VESA version 1.2

- [l4_uint16_t x_resolution](#)
Horizontal resolution in pixels or characters.
- [l4_uint16_t y_resolution](#)
Vertical resolution in pixels or characters.
- [l4_uint8_t x_char_size](#)
Character cell width in pixels.
- [l4_uint8_t y_char_size](#)
Character cell height in pixels.
- [l4_uint8_t number_of_planes](#)
Number of memory planes.
- [l4_uint8_t bits_per_pixel](#)
Bits per pixel.
- [l4_uint8_t number_of_banks](#)
Number of banks.
- [l4_uint8_t memory_model](#)
Memory model type.
- [l4_uint8_t bank_size](#)
Bank size in KiB.
- [l4_uint8_t number_of_image_pages](#)
Number of images.
- [l4_uint8_t reserved0](#)
Reserved for page function.

direct color

- [l4_uint8_t red_mask_size](#)
Size of direct color red mask in bits.
- [l4_uint8_t red_field_position](#)
Bit position of LSB of red mask.
- [l4_uint8_t green_mask_size](#)
Size of direct color green mask in bits.
- [l4_uint8_t green_field_position](#)
Bit position of LSB of green mask.
- [l4_uint8_t blue_mask_size](#)
Size of direct color blue mask in bits.
- [l4_uint8_t blue_field_position](#)
Bit position of LSB of blue mask.
- [l4_uint8_t reserved_mask_size](#)
Size of direct color reserved mask in bits.
- [l4_uint8_t reserved_field_position](#)
Bit position of LSB of reserved mask.

- [l4_uint8_t direct_color_mode_info](#)

Direct color mode attributes.

>= VESA version 2.0

- [l4_uint32_t phys_base](#)
Physical address for flat memory memory frame buffer.
- [l4_uint32_t reserved1](#)
Reserved – always set to 0.
- [l4_uint16_t reversed2](#)
Reserved – always set to 0.

>= VESA version 3.0

- [l4_uint16_t linear_bytes_per_scanline](#)
Bytes per scan line for linear modes.
- [l4_uint8_t banked_number_of_image_pages](#)
Number of images for banked modes.
- [l4_uint8_t linear_number_of_image_pages](#)
Number of images for linear modes.
- [l4_uint8_t linear_red_mask_size](#)
Size of direct color red mask (linear modes).
- [l4_uint8_t linear_red_field_position](#)
Bit position of LSB of red mask (linear modes).
- [l4_uint8_t linear_green_mask_size](#)
Size of direct color green mask (linear modes).
- [l4_uint8_t linear_green_field_position](#)
Bit position of LSB of green mask (linear modes).
- [l4_uint8_t linear_blue_mask_size](#)
Size of direct color blue mask (linear modes).
- [l4_uint8_t linear_blue_field_position](#)
Bit position of LSB of blue mask (linear modes).
- [l4_uint8_t linear_reserved_mask_size](#)
Size of direct color reserved mask (linear modes).
- [l4_uint8_t linear_reserved_field_position](#)
Bit position of LSB of reserved mask (linear modes).
- [l4_uint32_t max_pixel_clock](#)
Maximum pixel clock (in Hz) for graphics mode.
- [l4_uint8_t reserved3](#) [190]
Reserved (padding).

16.377.1 Detailed Description

VBE mode information.

Definition at line 125 of file [mb_info.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/mb_info.h](#)

16.378 L4vbus::Device Class Reference

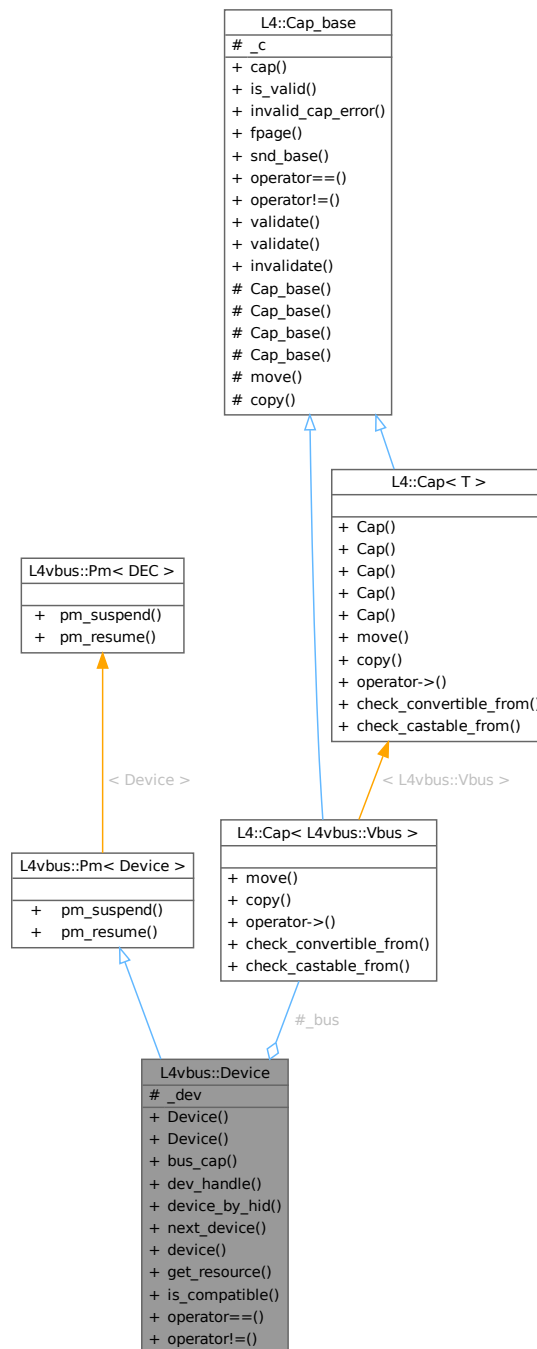

Device on a [L4vbus::Vbus](#).

```
#include <vbus>
```

Inheritance diagram for L4vbus::Device:

Collaboration diagram for L4vbus::Device:

Public Member Functions

- **Device ()**
Construct a new vbus device using the NULL device `L4VBUS_NULL`.
- **Device (L4::Cap< Vbus > bus, l4vbus_device_handle_t dev)**
Construct a new vbus device using a device handle.
- **L4::Cap< Vbus > bus_cap () const**

- Access the [Vbus](#) capability of the underlying virtual bus.

 - [l4vbus_device_handle_t dev_handle](#) () const

Access the device handle of this device.
- int [device_by_hid](#) ([Device](#) *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, [l4vbus_device_t](#) *devinfo=0) const

Find a device by the hardware interface identifier (HID).
- int [next_device](#) ([Device](#) *child, int depth=L4VBUS_MAX_DEPTH, [l4vbus_device_t](#) *devinfo=0) const

Find next child following *child*.
- int [device](#) ([l4vbus_device_t](#) *devinfo) const

Obtain detailed information about a [Vbus](#) device.
- int [get_resource](#) (unsigned res_idx, [l4vbus_resource_t](#) *res) const

Obtain the resource description of an individual device resource.
- int [is_compatible](#) (char const *cid) const

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.
- bool [operator==](#) ([Device](#) const &o) const

Test if two devices are the same [Vbus](#) device.
- bool [operator!=](#) ([Device](#) const &o) const

Test if two [Vbus](#) devices are not the same.

Public Member Functions inherited from [L4vbus::Pm](#)< [Device](#) >

- int [pm_suspend](#) () const

Suspend the device.
- int [pm_resume](#) () const

Resume the device.

Protected Attributes

- [L4::Cap](#)< [Vbus](#) > [_bus](#)
- The [Vbus](#) capability where this device is located on.
- [l4vbus_device_handle_t](#) [_dev](#)
- The device handle for this device.

16.378.1 Detailed Description

[Device](#) on a [L4vbus::Vbus](#).

Definition at line 83 of file [vbus](#).

16.378.2 Constructor & Destructor Documentation

16.378.2.1 Device()

```
L4vbus::Device::Device (
    L4::Cap< Vbus > bus,
    l4vbus\_device\_handle\_t dev) [inline]
```

Construct a new vbus device using a device handle.

Specifying the special root bus device handle [L4VBUS_ROOT_BUS](#) forms the root device of the corresponding vbus, see [Vbus::root](#).

Parameters

<i>bus</i>	The vbus capability where this device is assigned.
<i>dev</i>	The device handle of the device.

Definition at line 100 of file [vbus](#).

References [_bus](#), and [_dev](#).

16.378.3 Member Function Documentation

16.378.3.1 bus_cap()

```
L4::Cap< Vbus > L4vbus::Device::bus_cap () const [inline]
```

Access the [Vbus](#) capability of the underlying virtual bus.

Returns

the capability to the underlying [Vbus](#).

Definition at line 107 of file [vbus](#).

References [_bus](#).

Referenced by [L4vbus::Pci_dev::cfg_read\(\)](#), [L4vbus::Pci_host_bridge::cfg_read\(\)](#), [L4vbus::Pci_dev::cfg_write\(\)](#), [L4vbus::Pci_host_bridge::cfg_write\(\)](#), [L4vbus::Pci_dev::irq_enable\(\)](#), and [L4vbus::Pci_host_bridge::irq_enable\(\)](#).

Here is the caller graph for this function:

16.378.3.2 dev_handle()

```
l4vbus_device_handle_t L4vbus::Device::dev_handle () const [inline]
```

Access the device handle of this device.

Returns

the device handle for this device.

The device handle is used to directly address the device on its virtual bus.

Definition at line 116 of file [vbus](#).

References [_dev](#).

16.378.3.3 device()

```
int L4vbus::Device::device (  
    l4vbus_device_t * devinfo) const [inline]
```

Obtain detailed information about a [Vbus](#) device.

Parameters

out	<i>devinfo</i>	Information structure which contains details about the device. The pointer might be NULL.
-----	----------------	---

Return values

0	Success.
-L4_ENODEV	No device with the given device handle <i>dev</i> could be found.

Definition at line 189 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_device\(\)](#).

Here is the call graph for this function:

16.378.3.4 device_by_hid()

```
int L4vbus::Device::device_by_hid (
    Device * child,
    char const * hid,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0) const [inline]
```

Find a device by the hardware interface identifier (HID).

This function searches the vbus for a device with the given HID and returns a handle to the first matching device. The HID usually conforms to an ACPI HID or a Linux device tree compatible identifier.

It is possible to have multiple devices with the same HID on a vbus. In order to find all matching devices this function has to be called repeatedly with `child` pointing to the device found in the previous iteration. The iteration starts at `child` that might be any device node in the tree.

Parameters

in, out	<i>child</i>	Handle of the device from where in the device tree the search should start. To start searching from the beginning <code>child</code> must be initialized using the default (L4VBUS_NULL). If a matching device is found, its handle is returned through this parameter.
	<i>hid</i>	HID of the device
	<i>depth</i>	Maximum depth for the recursive lookup
out	<i>devinfo</i>	Device information structure (might be NULL)

Return values

<code>>=0</code>	A device with the given HID was found.
<code>-L4_ENOENT</code>	No device with the given HID could be found on the vbus.
<code>-L4_EINVAL</code>	Invalid or no HID provided.
<code>-L4_ENODEV</code>	Function called on a non-existing device.

Definition at line [148](#) of file [vbus](#).

References [_bus](#), [_dev](#), [Device\(\)](#), and [l4vbus_get_device_by_hid\(\)](#).

Here is the call graph for this function:

16.378.3.5 get_resource()

```
int L4vbus::Device::get_resource (
    unsigned res_idx,
    l4vbus_resource_t * res) const [inline]
```

Obtain the resource description of an individual device resource.

Parameters

	<i>res_idx</i>	Index of the resource for which the resource description should be returned. The total number of resources for a device is available in the l4vbus_device_t structure that is returned by L4vbus::Device::device_by_hid() and L4vbus::Device::next_device() .
out	<i>res</i>	Descriptor of the resource.

This function returns the resource descriptor of an individual device resource selected by the *res_idx* parameter.

Return values

0	Success.
-L4_ENOENT	Invalid resource index <i>res_idx</i> .

Definition at line 209 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_resource\(\)](#).

Here is the call graph for this function:

16.378.3.6 is_compatible()

```
int L4vbus::Device::is_compatible (
    char const * cid) const [inline]
```

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.

Parameters

<i>cid</i>	the compatibility ID to test
------------	------------------------------

Returns

1 when the given ID (*cid*) matches this device, 0 when the given ID does not match, <0 on error.

Definition at line 223 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_is_compatible\(\)](#).

Here is the call graph for this function:

**16.378.3.7 next_device()**

```

int L4vbus::Device::next_device (
    Device * child,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0) const [inline]
  
```

Find next child following `child`.

Parameters

in, out	<i>child</i>	Handle of the device that precedes the device that shall be returned. To start from the beginning, <i>child</i> must be initialized with L4VBUS_NULL (Device::Device). If a device is found, its handle is returned through this parameter.
	<i>depth</i>	Depth to look for
out	<i>devinfo</i>	Device information (might be NULL)

Returns

0 on success, else failure

Definition at line 171 of file [vbus](#).

References [_bus](#), [_dev](#), [Device\(\)](#), and [l4vbus_get_next_device\(\)](#).

Here is the call graph for this function:

16.378.3.8 `operator!=()`

```
bool L4vbus::Device::operator!= (
    Device const & o) const [inline]
```

Test if two [Vbus](#) devices are not the same.

Returns

true if the two devices are different, false else.

Definition at line [239](#) of file [vbus](#).

References [_bus](#), [_dev](#), and [Device\(\)](#).

Here is the call graph for this function:

16.378.3.9 `operator==()`

```
bool L4vbus::Device::operator== (
    Device const & o) const [inline]
```

Test if two devices are the same [Vbus](#) device.

Returns

true if the two devices are the same, false else.

Definition at line 230 of file [vbus](#).

References [_bus](#), [_dev](#), and [Device\(\)](#).

Here is the call graph for this function:

16.379.1 Detailed Description

A [Gpio_module](#) groups multiple GPIO pins together.

Definition at line 133 of file [vbus_gpio](#).

16.379.2 Member Function Documentation

16.379.2.1 config_pad()

```
int L4vbus::Gpio_module::config_pad (  
    Pin\_slice const & mask,  
    unsigned func,  
    unsigned value) const [inline]
```

Hardware specific configuration function for multiple GPIO pins.

Parameters

<i>mask</i>	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
<i>func</i>	Hardware specific configuration register, usually offset to the GPIO chip's base address.
<i>value</i>	Value which is written into the hardware specific configuration register for the specified pins

Returns

0 if OK, error code otherwise

Definition at line 185 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_config_pad\(\)](#).

Here is the call graph for this function:

16.379.2.2 get()

```
int L4vbus::Gpio_module::get (  
    unsigned offset,  
    unsigned * data) const [inline]
```

Read values of multiple GPIO pins at once.

Parameters

	<i>offset</i>	Pin corresponding to the LSB in <i>data</i> . Note: allowed may be hardware specific.
out	<i>data</i>	Each bit returns the value (0 or 1) for the corresponding GPIO pin. The value of pins that are not accessible is undefined.

Returns

0 if OK, error code otherwise

Definition at line 201 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_get\(\)](#).

Here is the call graph for this function:

16.379.2.3 pin()

```
Gpio_pin L4vbus::Gpio_module::pin (  
    unsigned pin) const [inline]
```

Get [Gpio_pin](#) for a specific pin of this [Gpio_module](#).

Parameters

<i>pin</i>	GPIO pin number to get Gpio_pin for.
------------	--

Returns

[Gpio_pin](#)

Definition at line 229 of file [vbus_gpio](#).

References [pin\(\)](#).

Referenced by [pin\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.379.2.4 set()

```
int L4vbus::Gpio_module::set (  
    Pin_slice const & mask,  
    unsigned data) [inline]
```

Set multiple GPIO output pins at once.

Parameters

<i>mask</i>	Mask of GPIO pins to set. A bit set to 1 selects this pin. A maximum of 32 pins can be set at once. The real number depends on the hardware and the driver implementation.
<i>data</i>	Each bit corresponds to the GPIO pin in <i>mask</i> . The value of each bit is written to the GPIO pin if its bit in <i>mask</i> is set.

Returns

0 if OK, error code otherwise

Definition at line 217 of file `vbus_gpio`.

References `L4vbus::Device::_bus`, `L4vbus::Device::_dev`, and `l4vbus_gpio_multi_set()`.

Here is the call graph for this function:

16.379.2.5 setup()

```
int L4vbus::Gpio_module::setup (
    Pin_slice const & mask,
    unsigned mode,
    unsigned value) const [inline]
```

Configure function of multiple GPIO pins at once.

Parameters

<i>mask</i>	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
<i>mode</i>	GPIO function, see L4vbus_gpio_generic_func for generic functions. Hardware specific functions must be provided in the lower 8 bits.
<i>value</i>	Optional value to set the GPIO pins to if they are configured as output pins

Returns

0 if OK, error code otherwise

Definition at line 166 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_setup\(\)](#).

The device handle for this device.

16.382.1 Detailed Description

[Vbus](#) Interrupt controller API.

Every [Vbus](#) contains a virtual interrupt control unit that manages the IRQs of the devices on the bus. This class provides access to a capability to an [L4::Icu](#) object which can then be used to interface with the IRQs.

See also

[L4::Icu](#)

Definition at line 260 of file [vbus](#).

16.382.2 Member Enumeration Documentation

16.382.2.1 Src_types

```
enum L4vbus::Icu::Src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

Src_dev_handle	Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in L4::Icu::msi_info() to denote that the ICU should interpret the source ID as a device handle.
----------------	---

Definition at line 264 of file [vbus](#).

16.382.3.1 vicu()

```
int L4vbus::Icu::vicu (  
    L4::Cap< L4::Icu > icu) const [inline]
```

Request an [L4::Icu](#) capability for this [Vbus](#)'s virtual ICU.

Parameters

<i>out</i>	<i>icu</i>	Capability slot where the L4::Icu capability shall be stored.
------------	------------	---

Return values

0	Success.
---	----------

<i>otherwise</i>	IPC error.
------------------	------------

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `l4/vbus/vbus`

16.383 L4vbus::Pci_dev Class Reference

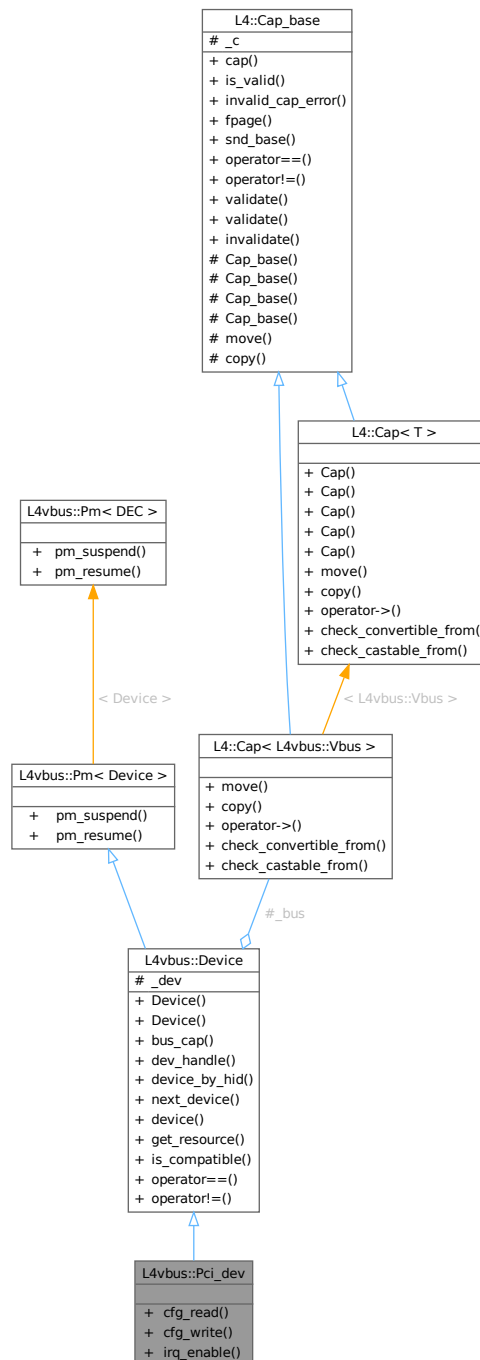

A PCI device.

```
#include <vbus_pci>
```

Inheritance diagram for L4vbus::Pci_dev:

Collaboration diagram for L4vbus::Pci_dev:

Public Member Functions

- `int cfg_read (l4_uint32_t reg, l4_uint32_t *value, l4_uint32_t width) const`
Read from the device's vPCI configuration space.
- `int cfg_write (l4_uint32_t reg, l4_uint32_t value, l4_uint32_t width) const`
Write to the device's vPCI configuration space.
- `int irq_enable (unsigned char *trigger, unsigned char *polarity) const`
Enable the device's PCI interrupt.

Public Member Functions inherited from L4vbus::Device

- **Device** ()
Construct a new vbus device using the NULL device L4VBUS_NULL.
- **Device** (L4::Cap< Vbus > bus, l4vbus_device_handle_t dev)
Construct a new vbus device using a device handle.
- **L4::Cap< Vbus > bus_cap** () const
Access the Vbus capability of the underlying virtual bus.
- **l4vbus_device_handle_t dev_handle** () const
Access the device handle of this device.
- **int device_by_hid** (Device *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const
Find a device by the hardware interface identifier (HID).
- **int next_device** (Device *child, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const
Find next child following child.
- **int device** (l4vbus_device_t *devinfo) const
Obtain detailed information about a Vbus device.
- **int get_resource** (unsigned res_idx, l4vbus_resource_t *res) const
Obtain the resource description of an individual device resource.
- **int is_compatible** (char const *cid) const
Check if the given device has a compatibility ID (CID) or HID that matches cid.
- **bool operator==** (Device const &o) const
Test if two devices are the same Vbus device.
- **bool operator!=** (Device const &o) const
Test if two Vbus devices are not the same.

Public Member Functions inherited from L4vbus::Pm< Device >

- **int pm_suspend** () const
Suspend the device.
- **int pm_resume** () const
Resume the device.

Additional Inherited Members

Protected Attributes inherited from L4vbus::Device

- **L4::Cap< Vbus > _bus**
The Vbus capability where this device is located on.
- **l4vbus_device_handle_t _dev**
The device handle for this device.

16.383.1 Detailed Description

A PCI device.

Definition at line 93 of file `vbus_pci`.

16.383.2 Member Function Documentation

16.383.2.1 `cfg_read()`

```
int L4vbus::Pci_dev::cfg_read (
    14_uint32_t reg,
    14_uint32_t * value,
    14_uint32_t width) const [inline]
```

Read from the device's vPCI configuration space.

Parameters

	<i>reg</i>	Register in configuration space to read
out	<i>value</i>	Value that has been read
	<i>width</i>	Width to read in bits (e.g. 8, 16, 32)

Returns

0 on success, else failure

Definition at line 105 of file `vbus_pci`.

References `L4vbus::Device::_dev`, `L4vbus::Device::bus_cap()`, and `l4vbus_pcidev_cfg_read()`.

Here is the call graph for this function:

16.383.2.2 `cfg_write()`

```
int L4vbus::Pci_dev::cfg_write (
    14_uint32_t reg,
    14_uint32_t value,
    14_uint32_t width) const [inline]
```

Write to the device's vPCI configuration space.

Parameters

<i>reg</i>	Register in configuration space to write
<i>value</i>	Value to write
<i>width</i>	Width to write in bits (e.g. 8, 16, 32)

Returns

0 on success, else failure

Definition at line 121 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pciddev_cfg_write\(\)](#).

Here is the call graph for this function:

16.383.2.3 irq_enable()

```
int L4vbus::Pci_dev::irq_enable (  
    unsigned char * trigger,  
    unsigned char * polarity) const [inline]
```

Enable the device's PCI interrupt.

Parameters

out	<i>trigger</i>	False if interrupt is level-triggered
out	<i>polarity</i>	True if interrupt is of low polarity

Returns

On success: Interrupt line to be used, else failure

Definition at line 137 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pcidev_irq_enable\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `l4/vbus/vbus_pci`

16.384 L4vbus::Pci_host_bridge Class Reference

A Pci host bridge.

```
#include <vbus_pci>
```

Inheritance diagram for L4vbus::Pci_host_bridge:

Collaboration diagram for L4vbus::Pci_host_bridge:

Public Member Functions

- `int cfg_read(l4_uint32_t bus, l4_uint32_t devfn, l4_uint32_t reg, l4_uint32_t *value, l4_uint32_t width) const`
Read from the vPCI configuration space using the PCI root bridge.
- `int cfg_write(l4_uint32_t bus, l4_uint32_t devfn, l4_uint32_t reg, l4_uint32_t value, l4_uint32_t width) const`
Write to the vPCI configuration space using the PCI root bridge.

- int [irq_enable](#) ([l4_uint32_t](#) bus, [l4_uint32_t](#) devfn, int pin, unsigned char *trigger, unsigned char *polarity) const

Enable PCI interrupt for a specific device using the PCI root bridge.

Public Member Functions inherited from [L4vbus::Device](#)

- [Device](#) ()
Construct a new vbus device using the NULL device [L4VBUS_NULL](#).
- [Device](#) ([L4::Cap](#)< [Vbus](#) > bus, [l4vbus_device_handle_t](#) dev)
Construct a new vbus device using a device handle.
- [L4::Cap](#)< [Vbus](#) > [bus_cap](#) () const
Access the [Vbus](#) capability of the underlying virtual bus.
- [l4vbus_device_handle_t](#) [dev_handle](#) () const
Access the device handle of this device.
- int [device_by_hid](#) ([Device](#) *child, char const *hid, int depth=[L4VBUS_MAX_DEPTH](#), [l4vbus_device_t](#) *devinfo=0) const
Find a device by the hardware interface identifier (HID).
- int [next_device](#) ([Device](#) *child, int depth=[L4VBUS_MAX_DEPTH](#), [l4vbus_device_t](#) *devinfo=0) const
*Find next child following *child*.*

The device handle for this device.

16.384.1 Detailed Description

A Pci host bridge.

Definition at line 25 of file [vbus_pci](#).

16.384.2 Member Function Documentation

16.384.2.1 `cfg_read()`

```
int L4vbus::Pci_host_bridge::cfg_read (
    l4_uint32_t bus,
    l4_uint32_t devfn,
    l4_uint32_t reg,
    l4_uint32_t * value,
    l4_uint32_t width) const [inline]
```

Read from the vPCI configuration space using the PCI root bridge.

Parameters

	<i>bus</i>	Bus number
	<i>devfn</i>	Device id (upper 16bit) and function (lower 16bit)
	<i>reg</i>	Register in configuration space to read
out	<i>value</i>	Value that has been read
	<i>width</i>	Width to read in bits (e.g. 8, 16, 32)

Returns

0 on success, else failure

Definition at line 39 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pci_cfg_read\(\)](#).

Here is the call graph for this function:

16.384.2.2 `cfg_write()`

```
int L4vbus::Pci_host_bridge::cfg_write (
    14_uint32_t bus,
    14_uint32_t devfn,
    14_uint32_t reg,
    14_uint32_t value,
    14_uint32_t width) const [inline]
```

Write to the vPCI configuration space using the PCI root bridge.

Parameters

<i>bus</i>	Bus number
<i>devfn</i>	Device id (upper 16bit) and function (lower 16bit)
<i>reg</i>	Register in configuration space to write
<i>value</i>	Value to write
<i>width</i>	Width to write in bits (e.g. 8, 16, 32)

Returns

0 on success, else failure

Definition at line 58 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pci_cfg_write\(\)](#).

Here is the call graph for this function:

16.384.2.3 `irq_enable()`

```
int L4vbus::Pci_host_bridge::irq_enable (
    14_uint32_t bus,
    14_uint32_t devfn,
    int pin,
    unsigned char * trigger,
    unsigned char * polarity) const [inline]
```

Enable PCI interrupt for a specific device using the PCI root bridge.

Parameters

	<i>bus</i>	Bus number
	<i>devfn</i>	Device id (upper 16bit) and function (lower 16bit)
	<i>pin</i>	Interrupt pin (normally as reported in configuration register INTR)
out	<i>trigger</i>	False if interrupt is level-triggered
out	<i>polarity</i>	True if interrupt is of low polarity

Returns

On success: Interrupt line to be used, else failure

Definition at line 79 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pci_irq_enable\(\)](#).

Resume the device.

16.385.1 Detailed Description

```
template<typename DEC>
class L4vbus::Pm< DEC >
```

Power-management API mixin.

Devices that inherit from this mixin provide an API to be suspended and resumed.

Definition at line 50 of file [vbus](#).

16.385.2 Member Function Documentation

16.385.2.1 pm_resume()

```
template<typename DEC>
int L4vbus::Pm< DEC >::pm_resume () const [inline]
```

Resume the device.

Switches the device from low-power mode to normal operation and restores the saved state.

Return values

0	Success.
---	----------

Definition at line 74 of file [vbus](#).

References [l4vbus_pm_resume\(\)](#).

Here is the call graph for this function:

16.385.2.2 pm_suspend()

```
template<typename DEC>
int L4vbus::Pm< DEC >::pm_suspend () const [inline]
```

Suspend the device.

Saves the state of the device and puts it into a low-power mode.

Return values

0	Success.
---	----------

Definition at line 63 of file [vbus](#).

References [l4vbus_pm_suspend\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `I4/vbus/vbus`

16.386 L4vbus::Vbus Class Reference

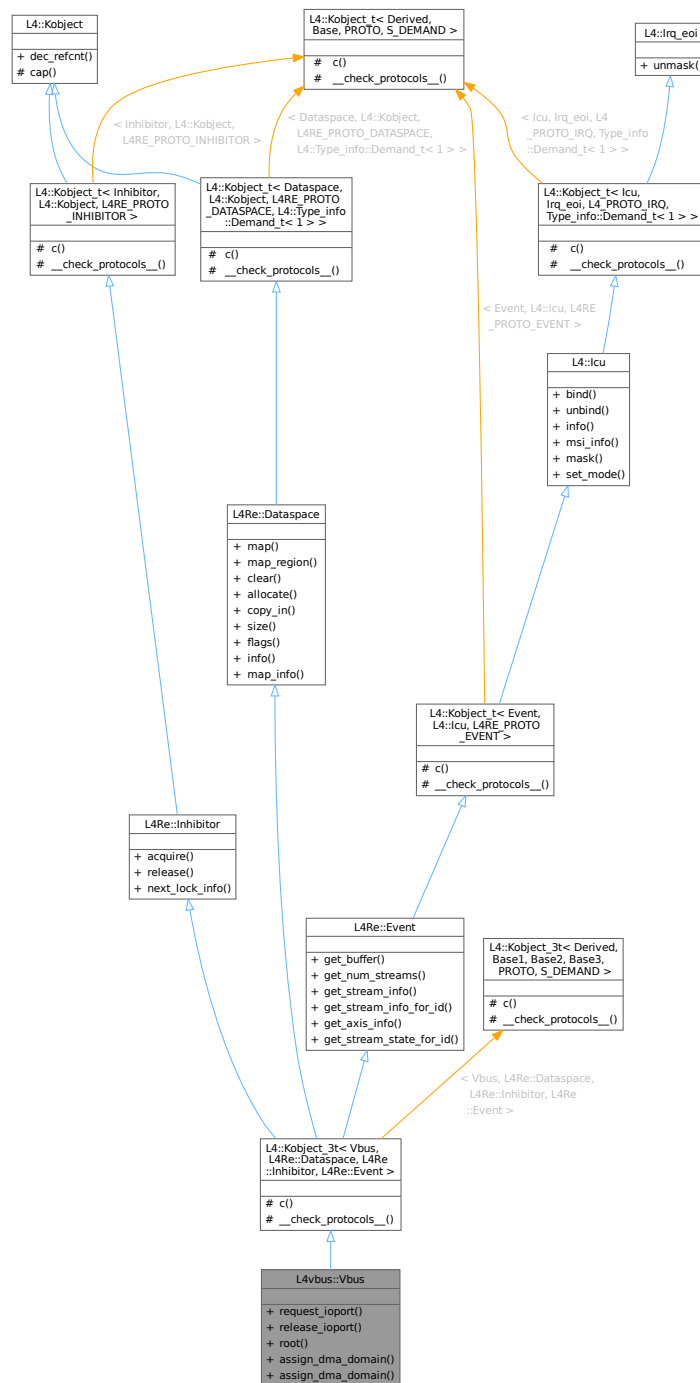

The virtual bus ([Vbus](#)) interface.

```
#include <vbus>
```

Inheritance diagram for L4vbus::Vbus:

Collaboration diagram for L4vbus::Vbus:

Public Member Functions

- `int request_ioport (l4vbus_resource_t *res) const`
Request the given IO port resource from the bus.
- `int release_ioport (l4vbus_resource_t *res) const`
Release the given IO port resource from the bus.
- `Device root () const`

Get the root device of the device tree of this bus.

- int [assign_dma_domain](#) (unsigned domain_id, unsigned flags, [L4::Cap](#)< [L4Re::Dma_space](#) > dma_space) const

Bind or unbind an [L4Re::Dma_space](#) to a DMA domain.

- int [assign_dma_domain](#) (unsigned domain_id, unsigned flags, [L4::Cap](#)< [L4::Task](#) > dma_space) const

Bind or unbind a kernel [DMA space](#) to a DMA domain.

Public Member Functions inherited from [L4Re::Dataspace](#)

- long [map](#) (Offset offset, Flags flags, Map_addr local_addr, Map_addr min_addr, Map_addr max_addr, [L4::Cap](#)< [L4::Task](#) > dst=[L4::Cap](#)< [L4::Task](#) >::Invalid) const noexcept

Request a flexpage mapping from the dataspace.

- long [map_region](#) (Offset offset, Flags flags, Map_addr min_addr, Map_addr max_addr, [L4::Cap](#)< [L4::Task](#) > dst=[L4::Cap](#)< [L4::Task](#) >::Invalid) const noexcept

Map a part of a dataspace into a local memory area.

- long [clear](#) (Offset offset, Size size)

Clear parts of a dataspace.

- long [allocate](#) (Offset offset, Size size)

Allocate a range in the dataspace.

- long [copy_in](#) (Offset dst_offs, [L4::lpc::Cap](#)< [Dataspace](#) > src, Offset src_offs, Size size)

Copy contents from another dataspace.

- Size [size](#) () const noexcept

Get size of a dataspace.

- Flags [flags](#) () const noexcept

Get flags of the dataspace.

- long [info](#) ([Stats](#) *stats)

Get information on the dataspace.

- long [map_info](#) ([l4_addr_t](#) *start_addr, [l4_addr_t](#) *end_addr)

Get mapping range of dataspace.

Public Member Functions inherited from [L4::Kobject](#)

- [l4_msgtag_t](#) [dec_refcnt](#) ([l4_mword_t](#) diff, [l4_utcb_t](#) *utcb=[l4_utcb](#)())

Decrement the in kernel reference counter for the object.

Public Member Functions inherited from [L4Re::Inhibitor](#)

- long [acquire](#) ([l4_umword_t](#) id, [L4::lpc::String](#)<> reason)

Acquire a specific inhibitor lock.

- long [release](#) ([l4_umword_t](#) id)

Release a specific inhibitor lock.

- long [next_lock_info](#) (char *name, unsigned len, [l4_mword_t](#) current_id=-1, [l4_utcb_t](#) *utcb=[l4_utcb](#)())

Get information for the next available inhibitor lock.

Public Member Functions inherited from L4Re::Event

- long [get_buffer](#) (L4::lpc::Out< L4::Cap< Dataspace > > ds)
Get event signal buffer.
- long [get_num_streams](#) ()
Get number of event streams.
- long [get_stream_info](#) (int idx, Event_stream_info *info)
Get event stream infos.
- long [get_stream_info_for_id](#) (l4_umword_t stream_id, Event_stream_info *info)
Get event stream infos.
- long [get_axis_info](#) (l4_umword_t stream_id, unsigned naxes, unsigned const *axis, Event_absinfo *info) const noexcept
Get event stream axis infos.
- long [get_stream_state_for_id](#) (l4_umword_t stream_id, Event_stream_state *state)
Get event stream state.

Public Member Functions inherited from L4::Icu

- [l4_msgtag_t bind](#) (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept
Bind an interrupt line of an interrupt controller to an interrupt object.
- [l4_msgtag_t unbind](#) (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept
Remove binding of an interrupt line from the interrupt controller object.
- [l4_msgtag_t info](#) (l4_icu_info_t *info, l4_utcb_t *utcb=l4_utcb()) noexcept
Get information about the ICU features.
- [l4_msgtag_t msi_info](#) (l4_umword_t irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info)
Get MSI info about IRQ.
- [l4_msgtag_t mask](#) (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept
Mask an IRQ line.
- [l4_msgtag_t set_mode](#) (unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb=l4_utcb()) noexcept
Set interrupt mode.

Public Member Functions inherited from L4::Irq_eoi

- [l4_msgtag_t unmask](#) (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept
Unmask the given interrupt line.

16.386.2 Member Function Documentation**16.386.2.1 `assign_dma_domain()` [1/2]**

```
int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4::Task > dma_space) const [inline]
```

Bind or unbind a kernel [DMA space](#) to a DMA domain.

Parameters

<i>domain_id</i>	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
<i>flags</i>	A combination of L4vbus_dma_domain_assign_flags .
<i>dma_space</i>	The DMA space capability to bind or unbind, this must be a kernel DMA space (L4::Task created with <code>L4_PROTO_DMA_SPACE</code>)

Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4Re::Dma_space > dma_space) const [inline]

```

Bind or unbind an [L4Re::Dma_space](#) to a DMA domain.

Parameters

<i>domain_id</i>	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
<i>flags</i>	A combination of L4vbus_dma_domain_assign_flags .
<i>dma_space</i>	The DMA space capability to bind or unbind, this must be an L4Re::Dma_space

Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

Definition at line 357 of file [vbus](#).

References [L4::Cap_base::cap\(\)](#), [L4::Kobject::cap\(\)](#), [L4Re::Dataspace::flags\(\)](#), [l4vbus_assign_dma_domain\(\)](#), [L4VBUS_DMAD_KERNEL_DMA_SPACE](#), and [L4VBUS_DMAD_L4RE_DMA_SPACE](#).

Here is the call graph for this function:

16.386.2.3 release_ioport()

```
int L4vbus::Vbus::release_ioport (
    l4vbus_resource_t * res) const [inline]
```

Release the given IO port resource from the bus.

Parameters

in	res	The IO port resource to be released from the bus.
----	-----	---

Returns

>=0 on success, <0 on error.

Definition at line 323 of file [vbus](#).

References [L4::Kobject::cap\(\)](#), and [l4vbus_release_ioport\(\)](#).

Here is the call graph for this function:

16.386.2.4 request_ioport()

```
int L4vbus::Vbus::request_ioport (
    l4vbus_resource_t * res) const [inline]
```

Request the given IO port resource from the bus.

Parameters

<i>in</i>	<i>res</i>	The IO port resource to be requested from the bus.
-----------	------------	--

Return values

<i>0</i>	Success.
<i>-L4_EINVAL</i>	Resource is not an IO port resource.
<i>-L4_ENOENT</i>	No matching IO port resource found.

Definition at line 311 of file [vbus](#).

References [L4::Kobject::cap\(\)](#), and [l4vbus_request_ioport\(\)](#).

Here is the call graph for this function:

**16.386.2.5 root()**

```
Device L4vbus::Vbus::root () const [inline]
```

Get the root device of the device tree of this bus.

The root device is usually the starting point for iterating the bus, see [Device::next_device](#).

Returns

A [Vbus](#) device representing the root of the device tree.

Definition at line 336 of file [vbus](#).

References [L4::Kobject::cap\(\)](#), and [L4VBUS_ROOT_BUS](#).

Here is the call graph for this function:

16.389 L4vcpu::State Class Reference

C++ implementation of state word in the vCPU area.

```
#include <vcpu>
```

Collaboration diagram for L4vcpu::State:

L4vcpu::State	
+	State()
+	add()
+	clear()
+	set()

Public Member Functions

- [State](#) (unsigned v)
Initialize state.
- void [add](#) (unsigned bits) throw ()
Add flags.
- void [clear](#) (unsigned bits) throw ()
Clear flags.
- void [set](#) (unsigned v) throw ()
Set flags.

16.389.1 Detailed Description

C++ implementation of state word in the vCPU area.

Definition at line [24](#) of file [vcpu](#).

16.389.2 Constructor & Destructor Documentation

16.389.2.1 State()

```
L4vcpu::State::State (  
    unsigned v) [inline], [explicit]
```

Initialize state.

Parameters

<i>v</i>	Initial state.
----------	----------------

Definition at line 34 of file [vcpu](#).

16.389.3 Member Function Documentation

16.389.3.1 add()

```
void L4vcpu::State::add (  
    unsigned bits) throw ( )    [inline]
```

Add flags.

Parameters

<i>bits</i>	Bits to add to the word.
-------------	--------------------------

Definition at line 41 of file [vcpu](#).

16.389.3.2 clear()

```
void L4vcpu::State::clear (  
    unsigned bits) throw ( )    [inline]
```

Clear flags.

Parameters

<i>bits</i>	Bits to clear in the word.
-------------	----------------------------

Definition at line 48 of file [vcpu](#).

16.389.3.3 set()

```
void L4vcpu::State::set (  
    unsigned v) throw ( )    [inline]
```

Set flags.

Parameters

<i>v</i>	Set the word to the value of <i>v</i> .
----------	---

Definition at line 55 of file [vcpu](#).

 - `l4_vcpu_ipc_regs_t const * i () const throw ()`
- Return pointer to IPC state.*

 - `void entry_sp (l4_umword_t sp)`
- Set vCPU entry stack pointer.*

 - `void entry_ip (l4_umword_t ip)`
- Set vCPU entry instruction pointer.*

 - `void print_state (const char *prefix="") const throw ()`
- Print the state of the vCPU.*

Static Public Member Functions

- `static int ext_alloc (Vcpu **vcpu, l4_addr_t *ext_state, L4::Cap< L4::Task > task=L4Re::Env::env() ->task(), L4::Cap< L4Re::Rm > rm=L4Re::Env::env() ->rm()) throw ()`

Allocate state area for an extended vCPU.
- `static Vcpu * cast (void *x) throw ()`

Cast a void pointer to a class pointer.
- `static Vcpu * cast (l4_addr_t x) throw ()`

Cast an address to a class pointer.

16.390.1 Detailed Description

C++ implementation of the vCPU save state area.

Definition at line 65 of file [vcpu](#).

16.390.2 Member Function Documentation

16.390.2.1 `cast()` [1/2]

```
Vcpu * L4vcpu::Vcpu::cast (
    l4\_addr\_t x) throw ( )    [inline], [static]
```

Cast an address to a class pointer.

Parameters

<i>x</i>	Pointer.
----------	----------

Returns

Pointer to [Vcpu](#) class.

Definition at line 269 of file [vcpu](#).

16.390.2.2 `cast()` [2/2]

```
Vcpu * L4vcpu::Vcpu::cast (
    void * x) throw ( )    [inline], [static]
```

Cast a void pointer to a class pointer.

Parameters

<i>x</i>	Pointer.
----------	----------

Returns

Pointer to [Vcpu](#) class.

Definition at line [259](#) of file [vcpu](#).

References [cast\(\)](#).

Referenced by [cast\(\)](#).

**16.390.2.3 entry_ip()**

```
void L4vcpu::Vcpu::entry_ip (  
    l4\_umword\_t ip) [inline]
```

Set vCPU entry instruction pointer.

Parameters

<i>ip</i>	Instruction pointer address to set.
-----------	-------------------------------------

Definition at line [232](#) of file [vcpu](#).

References [l4_vcpu_state_t::entry_ip](#).

16.390.2.4 entry_sp()

```
void L4vcpu::Vcpu::entry_sp (  
    14_umword_t sp) [inline]
```

Set vCPU entry stack pointer.

Parameters

<i>sp</i>	Stack pointer address to set.
-----------	-------------------------------

Note

The value is only used when entering from a user-task.

Definition at line 225 of file `vcpu`.

References `l4_vcpu_state_t::entry_sp`.

16.390.2.5 ext_alloc()

```
int L4vcpu::Vcpu::ext_alloc (
    Vcpu ** vcpu,
    l4_addr_t * ext_state,
    L4::Cap< L4::Task > task = L4Re::Env::env() ->task(),
    L4::Cap< L4Re::Rm > rm = L4Re::Env::env() ->rm() throw ( )    [static]
```

Allocate state area for an extended vCPU.

Parameters

out	<i>vcpu</i>	Allocated vcpu-state area.
out	<i>ext_state</i>	Allocated extended vcpu-state area.
	<i>task</i>	Task to use for allocation, defaults to own task.
	<i>rm</i>	Region manager to use for allocation defaults to standard region manager.

Returns

0 for success, error code otherwise

References `L4Re::Env::env()`, and `task()`.

Here is the call graph for this function:

16.390.2.6 i() [1/2]

```
l4_vcpu_ipc_regs_t * L4vcpu::Vcpu::i () throw ( ) [inline]
```

Return pointer to IPC state.

Returns

Pointer to register state.

Definition at line 202 of file `vcpu`.

References `l4_vcpu_state_t::r`.

16.390.2.15 `saved_state()` [1/2]

```
State * L4vcpu::Vcpu::saved_state () throw ( ) [inline]
```

Get `saved_state` word.

Returns

Pointer to `saved_state` word in the vCPU

Definition at line 106 of file `vcpu`.

References `l4_vcpu_state_t::saved_state`.

16.390.2.16 `saved_state()` [2/2]

```
State L4vcpu::Vcpu::saved_state () const throw ( ) [inline]
```

Get `saved_state` word.

Returns

Pointer to `saved_state` word in the vCPU

Definition at line 116 of file `vcpu`.

References `l4_vcpu_state_t::saved_state`.

16.390.2.17 state() [1/2]

```
State * L4vcpu::Vcpu::state () throw ( )    [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 88 of file [vcpu](#).

References [l4_vcpu_state_t::state](#).

16.390.2.18 state() [2/2]

```
State L4vcpu::Vcpu::state () const throw ( )    [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 99 of file [vcpu](#).

References [l4_vcpu_state_t::state](#).

16.390.2.19 task()

```
void L4vcpu::Vcpu::task (
    L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid) throw ( )    [inline]
```

Set the task of the vCPU.

Parameters

<i>task</i>	Task to set, defaults to invalid task.
-------------	--

Definition at line 174 of file [vcpu](#).

References [L4::Cap_base::Invalid](#), [task\(\)](#), and [l4_vcpu_state_t::user_task](#).

Referenced by [ext_alloc\(\)](#), and [task\(\)](#).

Here is the caller graph for this function:

16.390.2.20 wait_for_event()

```

void L4vcpu::Vcpu::wait_for_event (
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc) throw ( )    [inline]
  
```

Wait for event.

Parameters

<i>utcb</i>	The UTCB to use.
<i>do_event_work_cb</i>	Call-back function that is called in case an event (such as an interrupt) is pending.
<i>setup_ipc</i>	Call-back function that is called before an IPC operation is called.

Note that event delivery remains disabled after this function returns.

Definition at line 166 of file `vcpu`.

References `l4vcpu_wait_for_event()`.

16.391 L4virtio::Device Class Reference

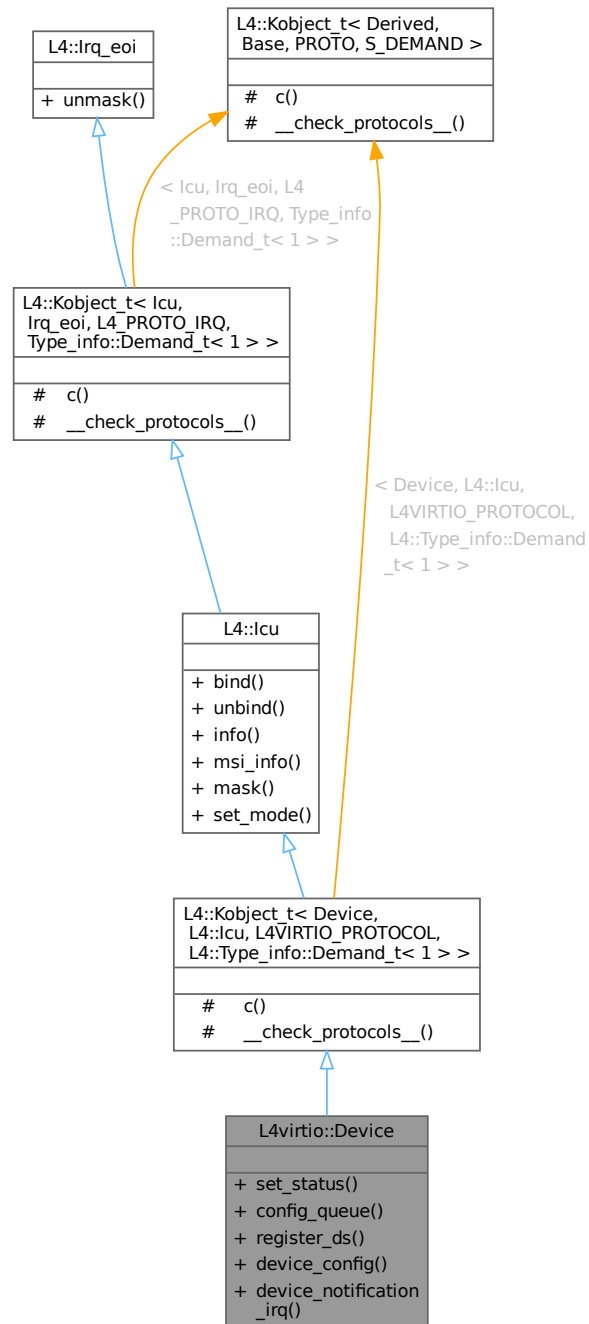

IPC interface for virtio over [L4](#) IPC.

```
#include <l4virtio>
```

Inheritance diagram for L4virtio::Device:

Collaboration diagram for L4virtio::Device:

Public Member Functions

- long `set_status` (unsigned status)
Write the VIRTIO status register.
- long `config_queue` (unsigned queue)
Trigger queue configuration of the given queue.

- long `register_ds` (`L4::lpc::Cap< L4Re::Dataspace >` ds_cap, `l4_uint64_t` base, `l4_umword_t` offset, `l4_umword_t` size)
Register a shared data space with VIRTIO host.
- long `device_config` (`L4::lpc::Out< L4::Cap< L4Re::Dataspace > >` config_ds, `l4_addr_t` *ds_offset)
Get the dataspace with the [L4virtio](#) configuration page.
- long `device_notification_irq` (unsigned index, `L4::lpc::Out< L4::Cap< L4::Triggerable > >` irq)
Get the notification interrupt corresponding to the given index.

Public Member Functions inherited from `L4::lcu`

- `l4_msgtag_t` `bind` (unsigned irqnum, `L4::Cap< Triggerable >` irq, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Bind an interrupt line of an interrupt controller to an interrupt object.
- `l4_msgtag_t` `unbind` (unsigned irqnum, `L4::Cap< Triggerable >` irq, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Remove binding of an interrupt line from the interrupt controller object.
- `l4_msgtag_t` `info` (`l4_icu_info_t` *info, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Get information about the ICU features.
- `l4_msgtag_t` `msi_info` (`l4_umword_t` irqnum, `l4_uint64_t` source, `l4_icu_msi_info_t` *msi_info)
Get MSI info about IRQ.
- `l4_msgtag_t` `mask` (unsigned irqnum, `l4_umword_t` *label=0, `l4_timeout_t` to=`L4_IPC_NEVER`, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Mask an IRQ line.
- `l4_msgtag_t` `set_mode` (unsigned irqnum, `l4_umword_t` mode, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Set interrupt mode.

Public Member Functions inherited from `L4::lrq_eoi`

- `l4_msgtag_t` `unmask` (unsigned irqnum, `l4_umword_t` *label=0, `l4_timeout_t` to=`L4_IPC_NEVER`, `l4_utcb_t` *utcb=`l4_utcb()`) noexcept
Unmask the given interrupt line.

Additional Inherited Members

Protected Types inherited from

- static void **__check_protocols__ ()** noexcept
Helper to check for protocol conflicts.

16.391.1 Detailed Description

IPC interface for virtio over [L4](#) IPC.

The [L4virtio](#) protocol is an adaption of the mmio virtio transport 1.0(4). This interface allows to exchange the necessary resources: device configuration page, notification interrupts and dataspace for payload.

Notification interrupts can be configured independently for changes to the configuration space and each queue through special L4virtio-specific `notify_index` fields in the config page and queue configuration. The interface distinguishes between device-to-driver and driver-to-device notification interrupts.

Device-to-driver interrupts are configured via the ICU interface. The device announces the maximum number of supported interrupts via `lcu::info()`. The driver can then bind interrupts using `lcu::bind()`.

Driver-to-device interrupts must be requested from the device through [device_notification_irq\(\)](#).

Definition at line 39 of file [l4virtio](#).

16.391.2 Member Function Documentation**16.391.2.1 config_queue()**

```
long L4virtio::Device::config_queue (
    unsigned queue)
```

Trigger queue configuration of the given queue.

Usually all queues are configured when the status is written to running. However, in some cases queues shall be disabled or enabled dynamically, in this case this function triggers a reconfiguration from the shared memory register of the queue config.

Parameters

<i>queue</i>	Queue index for the queue to be configured.
--------------	---

Return values

0	on success.
-L4_EIO	The queue's status is invalid.
-L4_ERANGE	The queue index exceeds the number of queues.
-L4_EINVAL	Otherwise.

References [config_queue\(\)](#), [L4VIRTIO_OP_REGISTER_DS](#), and [register_ds\(\)](#).

Referenced by [config_queue\(\)](#).

long L4virtio::Device::device_config (
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > config_ds,
    l4_addr_t * ds_offset)

```

Get the dataspace with the [L4virtio](#) configuration page.

Parameters

<i>config_ds</i>	Capability for receiving the dataspace capability for the shared L4-VIRTIO config data space.
------------------	---

<i>ds_offset</i>	Offset into the dataspace where the device configuration structure starts.
------------------	--

References [device_notification_irq\(\)](#), and [L4VIRTIO_OP_GET_DEVICE_IRQ](#).

Referenced by [register_ds\(\)](#).

16.391.2.3 device_notification_irq()

```

long L4virtio::Device::device_notification_irq (
    unsigned index,
    L4::Ipc::Out< L4::Cap< L4::Triggerable > > irq)

```

Get the notification interrupt corresponding to the given index.

Parameters

	<i>index</i>	Index of the interrupt.
out	<i>irq</i>	Triggerable for the given index.

Return values

<i>L4_EOK</i>	Success.
<i>L4_ENOSYS</i>	IRQ notification not supported by device.
<0	Other error.

An index is only guaranteed to return an IRQ object when the index is set in one of the device notify index fields. The device must return the same interrupt for a given index as long as the index is in use. If an index disappears as a result of a configuration change and then is reused later, the interrupt is not guaranteed to be the same.

Interrupts must always be rerequested after a device reset.

16.391.2.4 register_ds()

```

long L4virtio::Device::register_ds (
    L4::Ipc::Cap< L4Re::Dataspace > ds_cap,
    l4_uint64_t base,
    l4_umword_t offset,
    l4_umword_t size)

```

Register a shared data space with VIRTIO host.

Parameters

<i>ds_cap</i>	Dataspace capability to register. The lower 8 bits determine the rights mask with which the guest's rights are masked during the registration of the dataspace at the VIRTIO host.
<i>base</i>	VIRTIO guest physical start address of shared memory region
<i>offset</i>	Offset within the data space that is attached to the given <i>base</i> in the guest physical memory.
<i>size</i>	Size of the memory region in the guest

Return values

<i>L4_EOK</i>	Operation successful.
<i>-L4_EINVAL</i>	The <i>ds_cap</i> capability is invalid, does not refer to a valid dataspace, is not a trusted dataspace if trusted dataspace validation is enabled, or <i>size</i> and <i>offset</i> specify an invalid region.
<i>-L4_ENOMEM</i>	The limit of dataspaces that can be registered has been reached or no capability slot could be allocated.
<i>-L4_ERANGE</i>	<i>offset</i> is larger than the size of the dataspace.
<i><0</i>	Any error returned by the dataspace when queried for information during setup or any error returned by the region manager from attaching the dataspace.

Here is the caller graph for this function:

16.391.2.5 set_status()

```
long L4virtio::Device::set_status (
    unsigned status)
```

Write the VIRTIO status register.

Parameters

<i>status</i>	Status word to write to the VIRTIO status.
---------------	--

Return values

0	on success.
---	-------------

Note

All other registers are accessed via shared memory.

Send a request to the device.

16.392.1 Detailed Description

Simple class for accessing a virtio block device synchronously.

Definition at line 36 of file [virtio-block](#).

16.392.2 Member Function Documentation

16.392.2.1 add_block()

```
int L4virtio::Driver::Block_device::add_block (
    Handle handle,
    Ptr< void > addr,
    l4_uint32_t size) [inline]
```

Add a data block to a request that has already been set up.

Parameters

<i>handle</i>	Handle to request previously set up with start_request() .
<i>addr</i>	Address of data block in device address space.
<i>size</i>	Size of data block.

Return values

<i>L4_OK</i>	Block was successfully added.
<i>-L4_EAGAIN</i>	No descriptors available. Try again later.

Definition at line 229 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

16.392.2.2 process_request()

```
int L4virtio::Driver::Block_device::process_request (
    Handle handle) [inline]
```

Process request synchronously.

Parameters

<i>handle</i>	Handle to request to process.
---------------	-------------------------------

Return values

<i>L4_EOK</i>	Request processed successfully.
<i>-L4_EAGAIN</i>	No descriptors available. Try again later.
<i>-L4_EIO</i>	IO error during request processing.
<i>-L4_ENOSYS</i>	Unsupported request.
<i><0</i>	Another unspecified error occurred.

Sends a request to the driver that was previously set up with [start_request\(\)](#) and [add_block\(\)](#) and wait for it to be executed.

Definition at line 306 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EINVAL](#), [L4_EIO](#), [L4_ENOSYS](#), [L4_EOK](#), [L4VIRTIO_BLOCK_S_IOERR](#), [L4VIRTIO_BLOCK_S_OK](#), [L4VIRTIO_BLOCK_S_UNSUPP](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::write\(\)](#), [L4virtio::Driver::Device::send_and_wait\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

16.392.2.3 process_used_queue()

```
void L4virtio::Driver::Block_device::process_used_queue () [inline]
```

Process and free all items in the used queue.

If the request has a callback registered it is called after the item has been removed from the queue.

Definition at line 357 of file [virtio-block](#).

References [L4Re::chksys\(\)](#), and [L4_ENOSYS](#).

Here is the call graph for this function:

16.392.2.4 send_request()

```
int L4virtio::Driver::Block_device::send_request (
    Handle handle) [inline]
```

Process request asynchronously.

Parameters

<i>handle</i>	Handle to request to send to the device
---------------	---

Return values

<i>L4_OK</i>	Request was successfully scheduled.
<i>-L4_EAGAIN</i>	No descriptors available. Try again later.

Sends a request to the driver that was previously set up with [start_request\(\)](#) and [add_block\(\)](#) and wait for it to be executed.

Definition at line 265 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [L4virtio::Driver::Device::send\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

16.392.2.5 setup_device()

```
void L4virtio::Driver::Block_device::setup_device (
    L4::Cap< L4virtio::Device > srvcap,
    l4_size_t usermem,
    void ** userdata,
    Ptr< void > & user_devaddr,
    L4::Cap< L4Re::Dataspace > qds = L4::Cap<L4Re::Dataspace>(),
    l4_uint32_t fmask0 = -1U,
    l4_uint32_t fmask1 = -1U) [inline]
```

Establish a connection to the device and set up shared memory.

Parameters

	<i>srvcap</i>	IPC capability of the channel to the server.
	<i>usermem</i>	Size of additional memory to share with device.
out	<i>userdata</i>	Pointer to the region of user-usable memory.
out	<i>user_devaddr</i>	Address of user-usable memory in device address space.
	<i>qds</i>	External queue dataspace. If this capability is invalid, the function will attempt to allocate a dataspace on its own. Note that the external queue dataspace must be large enough.
	<i>fmask0</i>	Feature bits 0..31 that the driver supports.
	<i>fmask1</i>	Feature bits 32..63 that the driver supports.

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the block device. It will also allocate and share additional memory that the caller then can use freely, i.e. normally this memory would be used as a reception buffer. The caller may also decide to not make use of this convenience function and request 0 bytes in usermem. Then it has to allocate the block buffers for sending/receiving payload manually and share them using [register_ds\(\)](#).

Definition at line 92 of file [virtio-block](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4virtio::Driver::Device::config_queue\(\)](#), [L4Re::Mem_alloc::Continuous](#), [L4virtio::Driver::Device::driver_acknowledge\(\)](#), [L4virtio::Driver::Device::driver_connect\(\)](#), [L4Re::Env::env\(\)](#), [L4_EINVAL](#), [L4_ENODEV](#), [L4_PAGESHIFT](#), [l4_round_page\(\)](#), [l4_round_size\(\)](#), [L4VIRTIO_ID_BLOCK](#), [L4::lpc::make_cap_rw\(\)](#), [L4Re::Util::make_unique_cap\(\)](#), [L4virtio::Driver::Device::max_queue_size\(\)](#), [L4Re::Mem_alloc::Pinned](#), [L4virtio::Driver::Device::register_ds\(\)](#), [L4Re::Rm::F::RW](#), and [L4Re::Rm::F::Search_addr](#).

Here is the call graph for this function:

16.392.2.6 start_request()

```

Handle L4virtio::Driver::Block_device::start_request (
    l4_uint64_t sector,
    l4_uint32_t type,
    Callback callback) [inline]

```

Start the setup of a new request.

Parameters

<i>sector</i>	First sector to write to/read from.
<i>type</i>	Request type.
<i>callback</i>	Function to call, when the request is finished. May be 0 for synchronous requests.

Definition at line 191 of file [virtio-block](#).

Inheritance diagram for L4virtio::Driver::Device:

Collaboration diagram for L4virtio::Driver::Device:

Public Member Functions

- void `driver_connect` (`L4::Cap< L4virtio::Device >` `src`, bool `manage_notify=true`)
Contacts the device and starts the initial handshake.
- int `bind_notification_irq` (unsigned index, `L4::Cap< L4::Triggerable >` `irq`) const
Register a triggerable to receive notifications from the device.
- bool `fail_state` () const

- Return true if the device is in a fail state.*

 - bool `feature_negotiated` (unsigned int feat) const

Check if a particular feature bit was negotiated with the device.
- int `driver_acknowledge` ()

Finalize handshake with the device.
- int `register_ds` (L4::Cap< L4Re::Dataspace > ds, l4_umword_t offset, l4_umword_t size, l4_uint64_t *devaddr)

Share a dataspace with the device.
- int `config_queue` (int num, unsigned size, l4_uint64_t desc_addr, l4_uint64_t avail_addr, l4_uint64_t used_addr)

Send the virtqueue configuration to the device.
- int `max_queue_size` (int num) const

Maximum queue size allowed by the device.
- int `send_and_wait` (Virtqueue &queue, l4_uint16_t descno)

Send a request to the device and wait for it to be processed.
- int `wait` (int index) const

Wait for a notification from the device.
- int `wait_for_next_used` (Virtqueue &queue, l4_uint32_t *len=NULLPTR) const

Wait for the next item to arrive in the used queue and return it.
- void `send` (Virtqueue &queue, l4_uint16_t descno)

Send a request to the device.

16.394.1 Detailed Description

Client-side implementation for a general virtio device.

Definition at line 31 of file `l4virtio`.

16.394.2 Member Function Documentation

16.394.2.1 bind_notification_irq()

```
int L4virtio::Driver::Device::bind_notification_irq (
    unsigned index,
    L4::Cap< L4::Triggerable > irq) const [inline]
```

Register a triggerable to receive notifications from the device.

Parameters

	<i>index</i>	Index of the interrupt.
out	<i>irq</i>	Triggerable to register for notifications.

Definition at line 129 of file `l4virtio`.

References `l4_error()`.

Here is the call graph for this function:

16.394.2.2 config_queue()

```

int L4virtio::Driver::Device::config_queue (
    int num,
    unsigned size,
    l4_uint64_t desc_addr,
    l4_uint64_t avail_addr,
    l4_uint64_t used_addr) [inline]
  
```

Send the virtqueue configuration to the device.

Parameters

<i>num</i>	Number of queue to configure.
<i>size</i>	Size of rings in the queue, must be a power of 2)
<i>desc_addr</i>	Address of descriptor table (device address)
<i>avail_addr</i>	Address of available ring (device address)
<i>used_addr</i>	Address of used ring (device address)

Definition at line 212 of file [l4virtio](#).

Here is the caller graph for this function:

16.394.2.4 driver_connect()

```
void L4virtio::Driver::Device::driver_connect (
    L4::Cap< L4virtio::Device > srvcap,
    bool manage_notify = true) [inline]
```

Contacts the device and starts the initial handshake.

Parameters

<i>svrcap</i>	Capability for device communication.
<i>manage_notify</i>	Set up a semaphore for notifications from the device. See below.

Exceptions

L4::Runtime_error	if the initialisation fails
-----------------------------------	-----------------------------

This function contacts the server, sets up the notification channels and the configuration dataspace. After this is done, the caller can set up any dataspaces it needs. The initialisation then needs to be finished by calling [driver_acknowledge\(\)](#).

Per default this function creates and registers a semaphore for receiving notification from the device. This semaphore is used in the blocking functions [send_and_wait\(\)](#), [wait\(\)](#) and [next_used\(\)](#).

When `manage_notify` is false, then the caller may manually register and handle notification interrupts from the device. This is for example useful, when the client runs in an application with a server loop.

Definition at line 56 of file [l4virtio](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4Re::Env::env\(\)](#), [L4_EINVAL](#), [L4_EIO](#), [L4_ENODEV](#), [l4_error\(\)](#), [L4_PAGEMASK](#), [L4_PAGESHIFT](#), [L4_PAGESIZE](#), [L4_SUPERPAGESIZE](#), [L4VIRTIO_STATUS_ACKNOWLEDGE](#), [L4VIRTIO_STATUS_DRIVER](#), [L4::lpc::make_cap_rw\(\)](#), [L4Re::Util::make_unique_cap\(\)](#), [L4Re::Rm::F::RW](#), and [L4Re::Rm::F::Search_addr](#).

Here is the caller graph for this function:

16.394.2.5 feature_negotiated()

```
bool L4virtio::Driver::Device::feature_negotiated (
    unsigned int feat) const [inline]
```

Check if a particular feature bit was negotiated with the device.

The result is only valid after [driver_acknowledge\(\)](#) was called (when the handshake with the device was completed).

Parameters

<i>feat</i>	The feature bit.
-------------	------------------

Return values

<i>true</i>	The feature is supported by both driver and device.
<i>false</i>	The feature is not supported by the driver and/or device.

Definition at line [145](#) of file [l4virtio](#).

References [l4virtio_get_feature\(\)](#).

Here is the call graph for this function:

16.394.2.6 max_queue_size()

```
int L4virtio::Driver::Device::max_queue_size (
    int num) const [inline]
```

Maximum queue size allowed by the device.

Parameters

<i>num</i>	Number of queue for which to determine the maximum size.
------------	--

Definition at line 230 of file [l4virtio](#).

Referenced by [L4virtio::Driver::Virtio_net_device::rx_queue_size\(\)](#), [L4virtio::Driver::Block_device::setup_device\(\)](#), and [L4virtio::Driver::Virtio_net_device::tx_queue_size\(\)](#).

Here is the caller graph for this function:

16.394.2.7 register_ds()

```
int L4virtio::Driver::Device::register_ds (
    L4::Cap< L4Re::Dataspace > ds,
    l4_umword_t offset,
    l4_umword_t size,
    l4_uint64_t * devaddr) [inline]
```

Share a dataspace with the device.

Parameters

<i>ds</i>	Dataspace to share with the device.
<i>offset</i>	Offset in dataspace where the shared part starts.
<i>size</i>	Total size in bytes of the shared space.
<i>devaddr</i>	Start of shared space in the device address space.

Although this function allows to share only a part of the given dataspace for convenience, the granularity of sharing is always the dataspace level. Thus, the remainder of the dataspace is not protected from the device.

When communicating with the device, addresses must be given with respect to the device address space. This is not the same as the virtual address space of the client in order to not leak information about the address space layout.

Here is the caller graph for this function:

16.394.2.9 send_and_wait()

```

int L4virtio::Driver::Device::send_and_wait (
    Virtqueue & queue,
    l4_uint16_t descno) [inline]
  
```

Send a request to the device and wait for it to be processed.

Parameters

<i>queue</i>	Queue that contains the request in its descriptor table
<i>descno</i>	Index of first entry in descriptor table where

This function provides a simple mechanism to send requests synchronously. It must not be used with other requests at the same time as it directly waits for a notification on the device irq cap.

Precondition

`driver_connect()` was called with `manage_notify`.

Definition at line 247 of file `l4virtio`.

References `L4_EINVAL`, `L4_EOK`, `send()`, and `wait_for_next_used()`.

**16.394.2.11 wait_for_next_used()**

```

int L4virtio::Driver::Device::wait_for_next_used (
    Virtqueue & queue,
    l4_uint32_t * len = nullptr) const [inline]
  
```

Wait for the next item to arrive in the used queue and return it.

Parameters

	<i>queue</i>	A queue.
out	<i>len</i>	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.

Return values

≥ 0	Descriptor number of item removed from used queue.
< 0	IPC error while waiting for notification.

The call blocks until the next item is available in the used queue.

Precondition

[driver_connect\(\)](#) was called with `manage_notify`.

16.395 L4virtio::Driver::Virtio_net_device Class Reference

Simple class for accessing a virtio net device.

```
#include <virtio-net>
```

Inheritance diagram for L4virtio::Driver::Virtio_net_device:

Collaboration diagram for L4virtio::Driver::Virtio_net_device:

Data Structures

- struct [Packet](#)

Structure for a network packet (header including data) with maximum size, assuming that no extra features have been negotiated.

Public Member Functions

- int [rx_queue_size](#) () const
Return the maximum receive queue size allowed by the device.
- int [tx_queue_size](#) () const
Return the maximum transmit queue size allowed by the device.
- void [setup_device](#) (L4::Cap< L4virtio::Device > srvcap)
Establish a connection to the device and set up shared memory.
- [l4virtio_net_config_t](#) const & [device_config](#) () const
Return a reference to the device configuration.
- int [bind_rx_notification_irq](#) (L4::Cap< L4::Thread > thread, [l4_umword_t](#) label)
Bind the rx notification IRQ to the specified thread.
- [Packet](#) & [rx_pkt](#) ([l4_uint16_t](#) descno)
Return a reference to the RX packet buffer of the specified descriptor, e.g.
- [l4_uint16_t](#) [wait_rx](#) ([l4_uint32_t](#) *len=nullptr)
Block until a network packet has been received from the device and return the descriptor number.
- void [finish_rx](#) ([l4_uint16_t](#) descno)
Free an RX descriptor number to make it available for the RX queue again.
- void [queue_rx](#) ()
Queue new available descriptors in the RX queue.
- bool [tx](#) (std::function< [l4_uint32_t](#)([Packet](#) &)> prepare)
Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Public Member Functions inherited from [L4virtio::Driver::Device](#)

- void [driver_connect](#) (L4::Cap< L4virtio::Device > srvcap, bool manage_notify=true)
Contacts the device and starts the initial handshake.
- int [bind_notification_irq](#) (unsigned index, L4::Cap< L4::Triggerable > irq) const
Register a triggerable to receive notifications from the device.
- bool [fail_state](#) () const
Return true if the device is in a fail state.
- bool [feature_negotiated](#) (unsigned int feat) const
Check if a particular feature bit was negotiated with the device.
- int [driver_acknowledge](#) ()
Finalize handshake with the device.
- int [register_ds](#) (L4::Cap< L4Re::Dataspace > ds, [l4_umword_t](#) offset, [l4_umword_t](#) size, [l4_uint64_t](#) *devaddr)
Share a dataspace with the device.
- int [config_queue](#) (int num, unsigned size, [l4_uint64_t](#) desc_addr, [l4_uint64_t](#) avail_addr, [l4_uint64_t](#) used_↔ addr)
Send the virtqueue configuration to the device.
- int [max_queue_size](#) (int num) const
Maximum queue size allowed by the device.
- int [send_and_wait](#) ([Virtqueue](#) &queue, [l4_uint16_t](#) descno)
Send a request to the device and wait for it to be processed.
- int [wait](#) (int index) const
Wait for a notification from the device.
- int [wait_for_next_used](#) ([Virtqueue](#) &queue, [l4_uint32_t](#) *len=nullptr) const
Wait for the next item to arrive in the used queue and return it.
- void [send](#) ([Virtqueue](#) &queue, [l4_uint16_t](#) descno)
Send a request to the device.

16.395.1 Detailed Description

Simple class for accessing a virtio net device.

Definition at line 30 of file [virtio-net](#).

16.395.2 Member Function Documentation

16.395.2.1 `bind_rx_notification_irq()`

```
int L4virtio::Driver::Virtio_net_device::bind_rx_notification_irq (
    L4::Cap< L4::Thread > thread,
    l4_umword_t label) [inline]
```

Bind the rx notification IRQ to the specified thread.

Parameters

<i>thread</i>	Thread to bind the notification IRQ to.
<i>label</i>	Label to assign to the IRQ.

Definition at line 169 of file [virtio-net](#).

References [l4_error\(\)](#).

Here is the call graph for this function:

16.395.2.2 `finish_rx()`

```
void L4virtio::Driver::Virtio_net_device::finish_rx (
    l4_uint16_t descno) [inline]
```

Free an RX descriptor number to make it available for the RX queue again.

Parameters

<i>descno</i>	Descriptor number in the virtio queue.
---------------	--

Usually [queue_rx\(\)](#) should be called afterwards to queue the freed descriptor(s).

Definition at line 230 of file [virtio-net](#).

16.395.2.3 rx_pkt()

```
Packet & L4virtio::Driver::Virtio_net_device::rx_pkt (
    l4_uint16_t descno) [inline]
```

Return a reference to the RX packet buffer of the specified descriptor, e.g.

from [wait_rx\(\)](#).

Parameters

<i>descno</i>	Descriptor number in the virtio queue.
---------------	--

Definition at line 180 of file [virtio-net](#).

16.395.2.4 rx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::rx_queue_size () const [inline]
```

Return the maximum receive queue size allowed by the device.

[wait_rx\(\)](#) will return a descriptor number that is smaller than this size.

Definition at line 47 of file [virtio-net](#).

References [L4virtio::Driver::Device::max_queue_size\(\)](#).

Referenced by [setup_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.395.2.5 `setup_device()`

```
void L4virtio::Driver::Virtio_net_device::setup_device (  
    L4::Cap< L4virtio::Device > srvcap) [inline]
```

Establish a connection to the device and set up shared memory.

Parameters

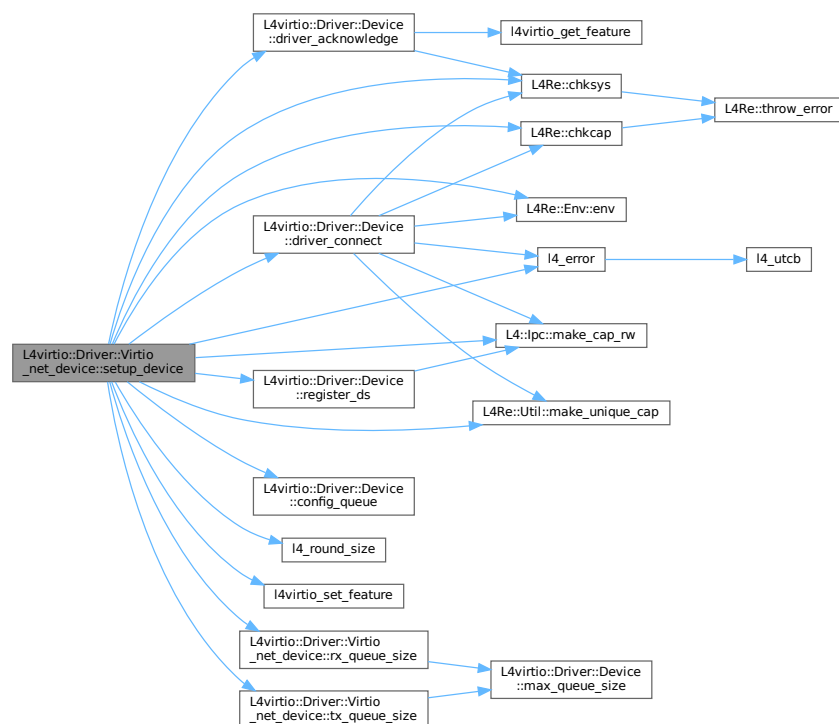

<i>srvcap</i>	IPC capability of the channel to the server.
---------------	--

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the network device.

Definition at line 66 of file [virtio-net](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4virtio::Driver::Device::config_queue\(\)](#), [L4Re::Mem_alloc::Continuous](#), [L4virtio::Driver::Device::driver_acknowledge\(\)](#), [L4virtio::Driver::Device::driver_connect\(\)](#), [L4Re::Env::env\(\)](#), [L4_EINVAL](#), [L4_ENODEV](#), [I4_error\(\)](#), [L4_PAGESHIFT](#), [I4_round_size\(\)](#), [L4VIRTIO_FEATURE_VERSION_1](#), [L4VIRTIO_ID_NET](#), [I4virtio_set_feature\(\)](#), [L4::lpc::make_cap_rw\(\)](#), [L4Re::Util::make_unique_cap\(\)](#), [L4Re::Mem_alloc::Pinned](#), [L4virtio::Driver::Device::register_ds\(\)](#), [L4Re::Rm::F::RW](#), [rx_queue_size\(\)](#), [L4Re::Rm::F::Search_addr](#), and [tx_queue_size\(\)](#).

Here is the call graph for this function:

16.395.2.6 tx()

```
bool L4virtio::Driver::Virtio_net_device::tx (
    std::function< I4_uint32_t(Packet &)> prepare) [inline]
```

Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Parameters

<i>prepare</i>	Function that fills the packet with data, should return the length of the data copied to the packet.
----------------	--

Return values

<i>true</i>	The packet was queued.
<i>false</i>	TX queue is full.

The prepare callback should fill the packet with data and return the length of the packet data (without the size of the virtio-net packet header).

Definition at line 260 of file [virtio-net](#).

References [L4virtio::Driver::Device::send\(\)](#).

Here is the call graph for this function:

16.395.2.7 tx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::tx_queue_size () const [inline]
```

Return the maximum transmit queue size allowed by the device.

[tx\(\)](#) will fail if the amount of queued packets exceeds this size.

Definition at line 54 of file [virtio-net](#).

References [L4virtio::Driver::Device::max_queue_size\(\)](#).

Referenced by [setup_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.395.2.8 wait_rx()

```

14_uint16_t L4virtio::Driver::Virtio_net_device::wait_rx (
    14_uint32_t * len = nullptr) [inline]
  
```

Block until a network packet has been received from the device and return the descriptor number.

Precondition

The calling thread must be bound to the rx notification IRQ via `bind_rx_notification_irq()`.

Parameters

out	len	(optional) Length of valid data in RX packet.
-----	-----	---

Returns

Descriptor number of received packet.

The packet data can be obtained with `rx_pkt()`. `finish_rx()` should be called after the packet buffer can be returned to the RX queue.

Definition at line 202 of file `virtio-net`.

References `L4Re::chksys()`.

Here is the call graph for this function:

16.397 L4virtio::Driver::Virtqueue Class Reference

Driver-side implementation of a [Virtqueue](#).

```
#include <virtqueue>
```

Inheritance diagram for L4virtio::Driver::Virtqueue:

Collaboration diagram for L4virtio::Driver::Virtqueue:

Public Member Functions

- void [initialize_rings](#) (unsigned [num](#))
Initialize the descriptor table and the index structures of this queue.
- void [init_queue](#) (unsigned [num](#), void *[desc](#), void *[avail](#), void *[used](#))
Initialize this virtqueue.
- void [init_queue](#) (unsigned [num](#), void *[base](#))

- Initialize this virtqueue.*
- [l4_uint16_t alloc_descriptor](#) ()
Allocate and return an unused descriptor from the descriptor table.
- void [enqueue_descriptor](#) ([l4_uint16_t](#) descno)
Enqueue a descriptor in the available ring.
- [Desc & desc](#) ([l4_uint16_t](#) descno)
Return a reference to a descriptor in the descriptor table.
- [l4_uint16_t find_next_used](#) ([l4_uint32_t](#) *len=nullptr)
Return the next finished block.
- void [free_descriptor](#) ([l4_uint16_t](#) head, [l4_uint16_t](#) tail)
Free a chained list of descriptors in the descriptor queue.

Public Member Functions inherited from [L4virtio::Virtqueue](#)

- void [disable](#) ()
Completely disable the queue.
- unsigned long [total_size](#) () const
Calculate the total size of this virtqueue.
- unsigned long [avail_offset](#) () const
Get the offset of the available ring from the descriptor table.
- unsigned long [used_offset](#) () const
Get the offset of the used ring from the descriptor table.
- void [setup](#) (unsigned [num](#), void *desc, void *avail, void *used)
Enable this queue.
- void [setup_simple](#) (unsigned [num](#), void *ring)
Enable this queue.
- void [dump](#) ([Desc](#) const *d) const
Dump descriptors for this queue.
- bool [ready](#) () const
Test if this queue is in working state.
- unsigned [num](#) () const
- bool [no_notify_guest](#) () const
Get the no IRQ flag of this queue.
- bool [no_notify_host](#) () const
Get the no notify flag of this queue.
- void [no_notify_host](#) (bool value)
Set the no-notify flag for this queue.
- [l4_uint16_t](#) [get_avail_idx](#) () const
Get available index from available ring (for debugging).
- [l4_uint16_t](#) [get_tail_avail_idx](#) () const
Get tail-available index stored in local state (for debugging).

Additional Inherited Members

Public Types inherited from [L4virtio::Virtqueue](#)

- enum
Fixed alignment values for different parts of a virtqueue.

Static Public Member Functions inherited from [L4virtio::Virtqueue](#)

- static unsigned long [total_size](#) (unsigned [num](#))
Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long [desc_size](#) (unsigned [num](#))
Calculate the size of the descriptor table for [num](#) entries.
- static unsigned long [desc_align](#) ()
Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long [avail_size](#) (unsigned [num](#))
Calculate the size of the available ring for [num](#) entries.
- static unsigned long [avail_align](#) ()
Get the alignment in zero LSBs needed for the available ring.
- static unsigned long [used_size](#) (unsigned [num](#))
Calculate the size of the used ring for [num](#) entries.
- static unsigned long [used_align](#) ()
Get the alignment in zero LSBs needed for the used ring.

Protected Member Functions inherited from [L4virtio::Virtqueue](#)

- [Virtqueue](#) ()=default
Create a disabled virtqueue.

Protected Attributes inherited from [L4virtio::Virtqueue](#)

- [Desc](#) * [_desc](#) = nullptr
pointer to descriptor table, NULL if queue is off.
- [Avail](#) * [_avail](#) = nullptr
pointer to available ring.
- [Used](#) * [_used](#) = nullptr
pointer to used ring.
- [l4_uint16_t](#) [_current_avail](#) = 0
The life counter for the queue.
- [l4_uint16_t](#) [_idx_mask](#) = 0
mask used for indexing into the descriptor table and the rings.

16.397.1 Detailed Description

Driver-side implementation of a [Virtqueue](#).

Adds function for managing the descriptor list, enqueueing new and dequeueing finished requests.

Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 470 of file [virtqueue](#).

16.397.2 Member Function Documentation

16.397.2.1 alloc_descriptor()

```
l4_uint16_t L4virtio::Driver::Virtqueue::alloc_descriptor () [inline]
```

Allocate and return an unused descriptor from the descriptor table.

The descriptor will be removed from the free list, the content should be considered undefined. After use, it needs to be freed using [free_descriptor\(\)](#).

Returns

The index of the reserved descriptor or Virtqueue::Eq if no free descriptor is available.

Note: the implementation uses $(2^{16} - 1)$ as the end of queue marker. That means that the final entry in the queue can not be allocated iff the queue size is 2^{16} .

Definition at line 558 of file [virtqueue](#).

References [L4virtio::Virtqueue::_desc](#).

16.397.2.2 desc()

```
Desc & L4virtio::Driver::Virtqueue::desc (
    l4_uint16_t descno) [inline]
```

Return a reference to a descriptor in the descriptor table.

Parameters

<i>descno</i>	Index of the descriptor, expected to be in correct range.
---------------	---

Definition at line 590 of file [virtqueue](#).

References [L4virtio::Virtqueue::_desc](#), and [L4virtio::Virtqueue::_idx_mask](#).

Referenced by [init_queue\(\)](#).

Here is the caller graph for this function:

16.397.2.3 enqueue_descriptor()

```
void L4virtio::Driver::Virtqueue::enqueue_descriptor (
    l4_uint16_t descno) [inline]
```

Enqueue a descriptor in the available ring.

Parameters

<i>descno</i>	Index of the head descriptor to enqueue.
---------------	--

Definition at line 574 of file [virtqueue](#).

References [L4virtio::Virtqueue::_avail](#), and [L4virtio::Virtqueue::_idx_mask](#).

Referenced by [L4virtio::Driver::Device::send\(\)](#).

Here is the caller graph for this function:

16.397.2.4 find_next_used()

```

14_uint16_t L4virtio::Driver::Virtqueue::find_next_used (
    14_uint32_t * len = nullptr) [inline]
  
```

Return the next finished block.

Parameters

out	<i>len</i>	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.
-----	------------	--

Returns

Index of the head or `Virtqueue::Eoq` if no used element is currently available.

Definition at line 609 of file [virtqueue](#).

References [L4virtio::Virtqueue::_current_avail](#), [L4virtio::Virtqueue::_idx_mask](#), and [L4virtio::Virtqueue::_used](#).

Referenced by [L4virtio::Driver::Device::wait_for_next_used\(\)](#).

Here is the caller graph for this function:

16.397.2.5 free_descriptor()

```
void L4virtio::Driver::Virtqueue::free_descriptor (
    14_uint16_t head,
    14_uint16_t tail) [inline]
```

Free a chained list of descriptors in the descriptor queue.

Parameters

<i>head</i>	Index of the first element in the descriptor chain.
<i>tail</i>	Index of the last element in the descriptor chain.

Simply takes the descriptor chain and prepends it to the beginning of the free list. Assumes that the list has been correctly chained.

Definition at line 631 of file [virtqueue](#).

References [L4virtio::Virtqueue::_desc](#), and [L4virtio::Virtqueue::_idx_mask](#).

16.397.2.6 `init_queue()` [1/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * base) [inline]
```

Initialize this virtqueue.

Parameters

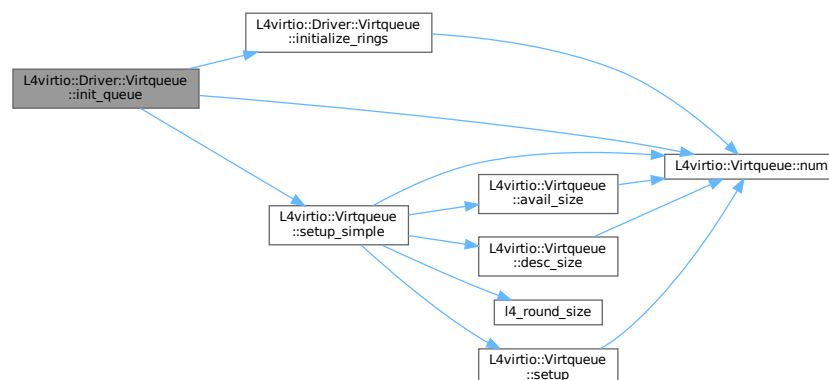

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>base</i>	The base address for the queue data structure.

This function sets up the memory and initializes the freelist.

Definition at line 537 of file [virtqueue](#).

References [initialize_rings\(\)](#), [L4virtio::Virtqueue::num\(\)](#), and [L4virtio::Virtqueue::setup_simple\(\)](#).

Here is the call graph for this function:

16.397.2.7 init_queue() [2/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * desc,
    void * avail,
    void * used) [inline]
```

Initialize this virtqueue.

Parameters

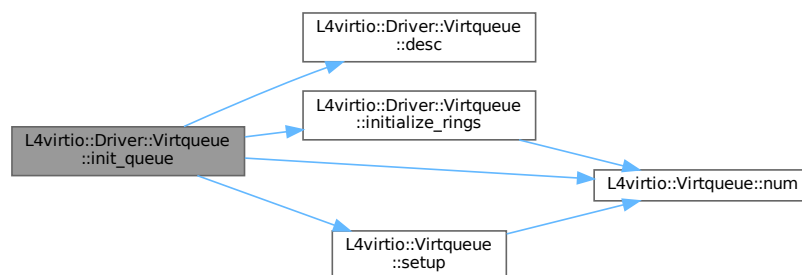

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>desc</i>	The address of the descriptor table. (Must be <code>Desc_align</code> aligned and at least <code>desc_size(num)</code> bytes in size.)
<i>avail</i>	The address of the available ring. (Must be <code>Avail_align</code> aligned and at least <code>avail_size(num)</code> bytes in size.)
<i>used</i>	The address of the used ring. (Must be <code>Used_align</code> aligned and at least <code>used_size(num)</code> bytes in size.)

This function sets up the memory and initializes the freelist.

Definition at line 522 of file [virtqueue](#).

References [desc\(\)](#), [initialize_rings\(\)](#), [L4virtio::Virtqueue::num\(\)](#), and [L4virtio::Virtqueue::setup\(\)](#).

Here is the call graph for this function:

16.397.2.8 initialize_rings()

```
void L4virtio::Driver::Virtqueue::initialize_rings (
    unsigned num) [inline]
```

Initialize the descriptor table and the index structures of this queue.

Parameters

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
------------	--

Precondition

The queue must be set up correctly with [setup\(\)](#) or [setup_simple\(\)](#).

Definition at line [494](#) of file [virtqueue](#).

References [L4virtio::Virtqueue::_avail](#), [L4virtio::Virtqueue::_desc](#), [L4virtio::Virtqueue::_used](#), and [L4virtio::Virtqueue::num\(\)](#).

Referenced by [init_queue\(\)](#), and [init_queue\(\)](#).

16.398 L4virtio::Ptr< T > Class Template Reference

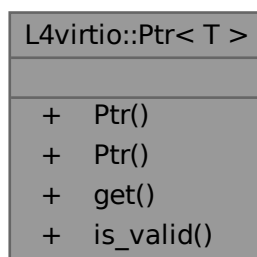

Pointer used in virtio descriptors.

```
#include <virtqueue>
```

Inheritance diagram for L4virtio::Ptr< T >:

Collaboration diagram for L4virtio::Ptr< T >:

Public Types

- enum `Invalid_type` { `Invalid` }
Type for making an invalid (NULL) `Ptr`.

Public Member Functions

- `Ptr` (`Invalid_type`)

Make and invalid [Ptr](#).

- **Ptr** ([l4_uint64_t](#) vm_addr)

Make a [Ptr](#) from a raw 64bit address.

- [l4_uint64_t](#) get () const
- bool [is_valid](#) () const

16.398.1 Detailed Description

```
template<typename T>
class L4virtio::Ptr< T >
```

Pointer used in virtio descriptors.

As the descriptor contain guest addresses these pointers cannot be dereferenced directly.

Definition at line 47 of file [virtqueue](#).

16.398.2 Member Enumeration Documentation

16.398.2.1 Invalid_type

```
template<typename T>
enum L4virtio::Ptr::Invalid_type
```

Type for making an invalid (NULL) [Ptr](#).

Enumerator

Invalid	Use to set a Ptr to invalid (NULL).
---------	---

Definition at line 51 of file [virtqueue](#).

16.398.3 Member Function Documentation

16.398.3.1 get()

```
template<typename T>
l4_uint64_t L4virtio::Ptr< T >::get () const [inline]
```

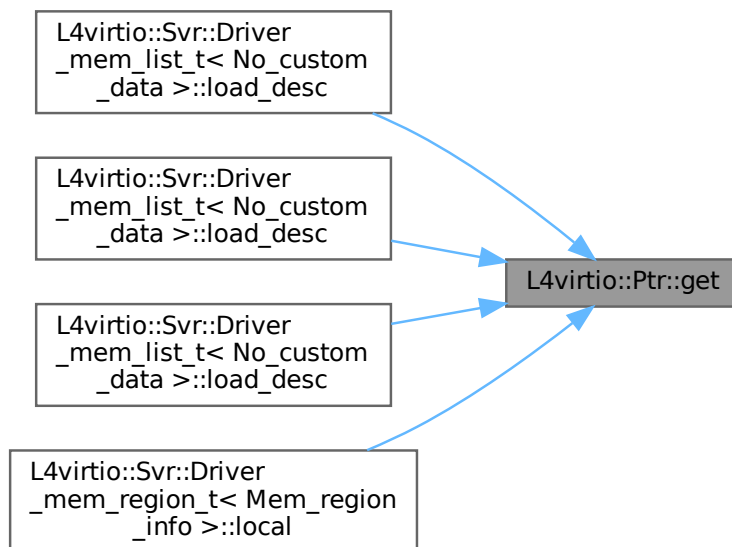

Returns

The raw 64bit address of the stored pointer.

Definition at line 62 of file [virtqueue](#).

Referenced by [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#), [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#), [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#), and [L4virtio::Svr::Driver_mem_region_t< Mem_region_info >::local](#).

Here is the caller graph for this function:

**16.398.3.2 is_valid()**

```
template<typename T>
bool L4virtio::Ptr< T >::is_valid () const [inline]
```

Returns

true if the stored pointer is valid (not NULL).

Definition at line 65 of file [virtqueue](#).

The documentation for this class was generated from the following file:

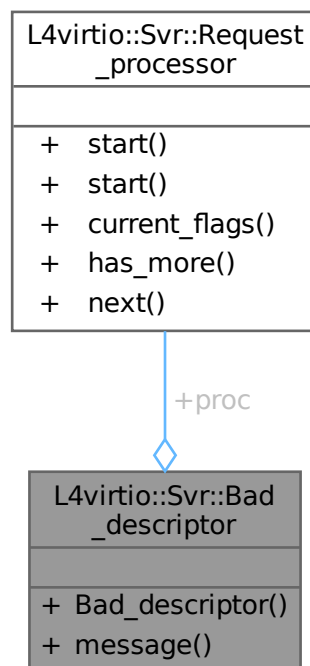

- `I4/I4virtio/virtqueue`

16.399 L4virtio::Svr::Bad_descriptor Struct Reference

Exception used by Queue to indicate descriptor errors.

Public Types

- enum [Error](#) {
[Bad_address](#) , [Bad_rights](#) , [Bad_flags](#) , [Bad_next](#) ,
[Bad_size](#) }

The error code.

Public Member Functions

- [Bad_descriptor](#) ([Request_processor](#) const *[proc](#), [Error](#) e)
Make a bad descriptor exception.
- char const * [message](#) () const
Get a human readable description of the error code.

Data Fields

- [Request_processor](#) const * **proc**
The processor that triggered the exception.

16.399.1 Detailed Description

Exception used by Queue to indicate descriptor errors.

Definition at line 397 of file [virtio](#).

16.399.2 Member Enumeration Documentation

16.399.2.1 Error

```
enum L4virtio::Svr::Bad_descriptor::Error
```

The error code.

Enumerator

Bad_address	Address cannot be translated.
Bad_rights	Missing access rights on memory.
Bad_flags	Invalid combination of descriptor flags.
Bad_next	Invalid next index.
Bad_size	Invalid size of memory block.

Definition at line 400 of file [virtio](#).

16.399.3 Constructor & Destructor Documentation

16.399.3.1 Bad_descriptor()

```
L4virtio::Svr::Bad_descriptor::Bad_descriptor (  
    Request_processor const * proc,  
    Error e) [inline]
```

Make a bad descriptor exception.

Parameters

<i>proc</i>	The request processor causing the exception
<i>e</i>	The error code.

Definition at line 421 of file [virtio](#).

References [proc](#).

16.399.4 Member Function Documentation

16.399.4.1 message()

```
char const * L4virtio::Svr::Bad_descriptor::message () const [inline]
```

Get a human readable description of the error code.

Returns

Message describing the error.

Definition at line 430 of file [virtio](#).

16.400 L4virtio::Svr::Block_dev_base< Ds_data > Class Template Reference

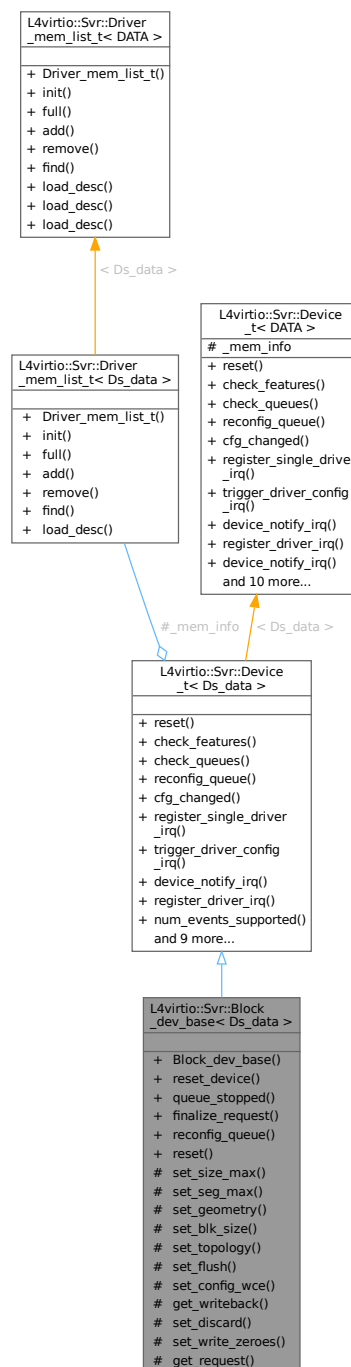

Base class for virtio block devices.

```
#include <virtio-block>
```

Inheritance diagram for L4virtio::Svr::Block_dev_base< Ds_data >:

Collaboration diagram for L4virtio::Svr::Block_dev_base< Ds_data >:

Public Member Functions

- **Block_dev_base** (`l4_uint32_t` vendor, unsigned queue_size, `l4_uint64_t` capacity, bool read_only)
Create a new virtio block device.
- virtual void **reset_device** ()=0
Reset the actual hardware device.
- virtual bool **queue_stopped** ()=0

- *Return true, if the queues should not be processed further.*
- void **finalize_request** (cxx::unique_ptr< [Request](#) > req, unsigned sz, [l4_uint8_t](#) status=L4VIRTIO_BLOCK_S_OK)
Releases resources related to a request and notifies the client.
- int **reconfig_queue** (unsigned idx) override
callback for client queue-config request
- void **reset** () override
reset callback, called for doing a device reset

Public Member Functions inherited from [L4virtio::Svr::Device_t< Ds_data >](#)

- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual [L4::Cap< L4::Irq >](#) **device_notify_irq** () const
callback to gather the device notification IRQ (old-style)
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- [Device_t](#) ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- void **set_size_max** ([l4_uint32_t](#) sz)
Sets the maximum size of any single segment reported to client.
- void **set_seg_max** ([l4_uint32_t](#) sz)
Sets the maximum number of segments in a request that is reported to client.
- void **set_geometry** ([l4_uint16_t](#) cylinders, [l4_uint8_t](#) heads, [l4_uint8_t](#) sectors)
Set disk geometry that is reported to the client.
- void **set_blk_size** ([l4_uint32_t](#) sz)
Sets block disk size to be reported to the client.

- void `set_topology` (`l4_uint8_t` physical_block_exp, `l4_uint8_t` alignment_offset, `l4_uint32_t` min_io_size, `l4_uint32_t` opt_io_size)
Sets the I/O alignment information reported back to the client.
- void `set_flush` ()
Enables the flush command.
- void `set_config_wce` (`l4_uint8_t` writeback)
Sets cache mode and enables the writeback toggle.
- `l4_uint8_t` `get_writeback` ()
Get the writeback field from the configuration space.
- void `set_discard` (`l4_uint32_t` max_discard_sectors, `l4_uint32_t` max_discard_seg, `l4_uint32_t` discard_sector_alignment)
Sets constraints for and enables the discard command.
- void `set_write_zeroes` (`l4_uint32_t` max_write_zeroes_sectors, `l4_uint32_t` max_write_zeroes_seg, `l4_uint8_t` write_zeroes_may_unmap)
Sets constraints for and enables the write zeroes command.
- `cxx::unique_ptr`< `Request` > `get_request` ()
Return one request if available.

Additional Inherited Members

Protected Attributes inherited from `L4virtio::Svr::Device_t`< `Ds_data` >

- `Mem_list` `_mem_info`
Memory region list.

16.400.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_dev_base< Ds_data >
```

Base class for virtio block devices.

Use this class as a base to implement your own specific block device.

Definition at line 259 of file `virtio-block`.

16.400.2 Constructor & Destructor Documentation

16.400.2.1 `Block_dev_base()`

```
template<typename Ds_data>
L4virtio::Svr::Block_dev_base< Ds_data >::Block_dev_base (
    l4_uint32_t vendor,
    unsigned queue_size,
    l4_uint64_t capacity,
    bool read_only) [inline]
```

Create a new virtio block device.

Parameters

<i>vendor</i>	Vendor ID
<i>queue_size</i>	Number of entries to provide in avail and used queue.
<i>capacity</i>	Size of the device in 512-byte sectors.
<i>read_only</i>	True, if the device should not be writable.

Definition at line 444 of file [virtio-block](#).

References [L4virtio::Svr::Device_t< Ds_data >::Device_t\(\)](#), [L4VIRTIO_FEATURE_VERSION_1](#), [L4VIRTIO_ID_BLOCK](#), and [L4virtio::Svr::Device_t< Ds_data >::reset_queue_config\(\)](#).

Here is the call graph for this function:

16.400.3 Member Function Documentation

16.400.3.1 finalize_request()

```

template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::finalize_request (
    cxx::unique_ptr< Request > req,
    unsigned sz,
    l4_uint8_t status = L4VIRTIO_BLOCK_S_OK) [inline]
  
```

Releases resources related to a request and notifies the client.

Parameters

<i>req</i>	Pointer to request that has finished.
<i>sz</i>	Number of bytes consumed.
<i>status</i>	Status of request (see L4virtio_block_status).

This function must be called when an asynchronous request finishes, either successfully or with an error. The status byte in the request must have been set prior to calling it.

Definition at line 483 of file [virtio-block](#).

References [L4virtio::Svr::Device_t< Ds_data >::device_error\(\)](#), [L4VIRTIO_BLOCK_S_OK](#), [L4VIRTIO_IRQ_STATUS_VRING](#), and [L4virtio::Virtqueue::no_notify_guest\(\)](#).

Here is the call graph for this function:

16.400.3.2 get_writeback()

```
template<typename Ds_data>
l4_uint8_t L4virtio::Svr::Block_dev_base< Ds_data >::get_writeback () [inline], [protected]
```

Get the writeback field from the configuration space.

Returns

Value of the writeback field.

Definition at line 388 of file [virtio-block](#).

16.400.3.3 set_blk_size()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_blk_size (
    l4_uint32_t sz) [inline], [protected]
```

Sets block disk size to be reported to the client.

Setting this does not change the logical sector size used for addressing the device.

Definition at line 332 of file [virtio-block](#).

16.400.3.4 set_config_wce()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_config_wce (
    l4_uint8_t writeback) [inline], [protected]
```

Sets cache mode and enables the writeback toggle.

Parameters

<i>writeback</i>	Mode of the cache (0 for writethrough, 1 for writeback).
------------------	--

Definition at line 375 of file [virtio-block](#).

16.400.3.5 set_discard()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_discard (
    14_uint32_t max_discard_sectors,
    14_uint32_t max_discard_seg,
    14_uint32_t discard_sector_alignment) [inline], [protected]
```

Sets constraints for and enables the discard command.

Parameters

<i>max_discard_sectors</i>	Maximum discard sectors size.
<i>max_discard_seg</i>	Maximum discard segment number.
<i>discard_sector_alignment</i>	Can be used by the driver when splitting a request based on alignment.

Definition at line 402 of file [virtio-block](#).

16.400.3.6 set_size_max()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_size_max (
    14_uint32_t sz) [inline], [protected]
```

Sets the maximum size of any single segment reported to client.

The limit is also applied to any incoming requests. Requests with larger segments result in an IO error being reported to the client. That means that `process_request()` can safely make the assumption that all segments in the received request are smaller.

Definition at line 290 of file [virtio-block](#).

16.400.3.7 set_topology()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_topology (
    14_uint8_t physical_block_exp,
    14_uint8_t alignment_offset,
    14_uint32_t min_io_size,
    14_uint32_t opt_io_size) [inline], [protected]
```

Sets the I/O alignment information reported back to the client.

Parameters

<i>physical_block_exp</i>	Number of logical blocks per physical block(log2)
<i>alignment_offset</i>	Offset of the first aligned logical block
<i>min_io_size</i>	Suggested minimum I/O size in blocks
<i>opt_io_size</i>	Optimal I/O size in blocks

Definition at line 348 of file [virtio-block](#).

16.400.3.8 set_write_zeroes()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_write_zeroes (
    14_uint32_t max_write_zeroes_sectors,
    14_uint32_t max_write_zeroes_seg,
    14_uint8_t write_zeroes_may_unmap) [inline], [protected]
```

Sets constraints for and enables the write zeroes command.

Parameters

<i>max_write_zeroes_sectors</i>	Maximum write zeroes sectors size.
<i>max_write_zeroes_seg</i>	maximum write zeroes segment number.
<i>write_zeroes_may_unmap</i>	Set if a write zeroes request can result in deallocating one or more sectors.

Definition at line 422 of file [virtio-block](#).

- l4/l4virtio/server/virtio-block

16.401 L4virtio::Svr::Block_request< Ds_data > Class Template Reference

A request to read or write data.

```
#include <virtio-block>
```

Collaboration diagram for L4virtio::Svr::Block_request< Ds_data >:

Public Member Functions

- unsigned [data_size](#) () const
Compute the total size of the data in the request.
- bool **has_more** ()
Check if the request contains more data blocks.
- Data_block [next_block](#) ()
Return next block in scatter-gather list.
- [l4virtio_block_header_t](#) const & **header** () const
Return the block request header.

16.401.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_request< Ds_data >
```

A request to read or write data.

Definition at line 28 of file [virtio-block](#).

16.401.2 Member Function Documentation

16.401.2.1 data_size()

```
template<typename Ds_data>
unsigned L4virtio::Svr::Block_request< Ds_data >::data_size () const [inline]
```

Compute the total size of the data in the request.

Return values

Size	in bytes or 0 if there was an error.
------	--------------------------------------

Exceptions

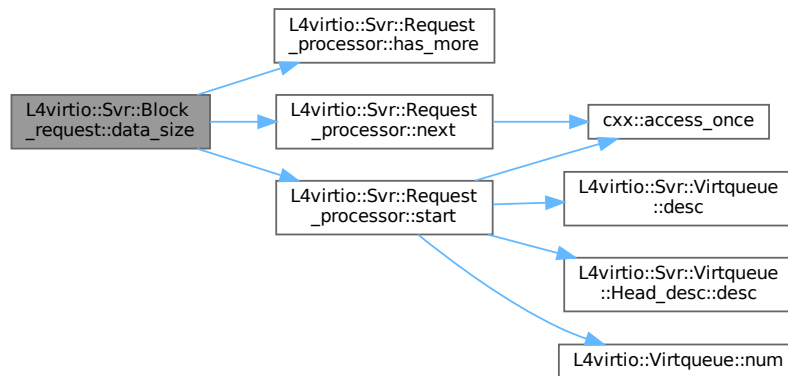

L4::Runtime_error(-L4_EIO)	Request has a bad format.
--	---------------------------

Note that this operation is relatively expensive as it has to iterate over the complete list of blocks.

Definition at line 63 of file [virtio-block](#).

References [L4virtio::Svr::Request_processor::has_more\(\)](#), [L4_EIO](#), [L4virtio::Svr::Request_processor::next\(\)](#), and [L4virtio::Svr::Request_processor::start\(\)](#).

Here is the call graph for this function:

16.401.2.2 next_block()

```
template<typename Ds_data>
Data_block L4virtio::Svr::Block_request< Ds_data >::next_block () [inline]
```

Return next block in scatter-gather list.

Returns

Information about the next data block.

Exceptions

<i>L4::Runtime_error</i>	No more data block is available.
<i>Bad_descriptor</i>	Virtio request is corrupted.

Definition at line 113 of file [virtio-block](#).

References [L4virtio::Svr::Bad_descriptor::Bad_size](#), and [L4_EEXIST](#).

16.404 L4virtio::Svr::Console::Device Class Reference

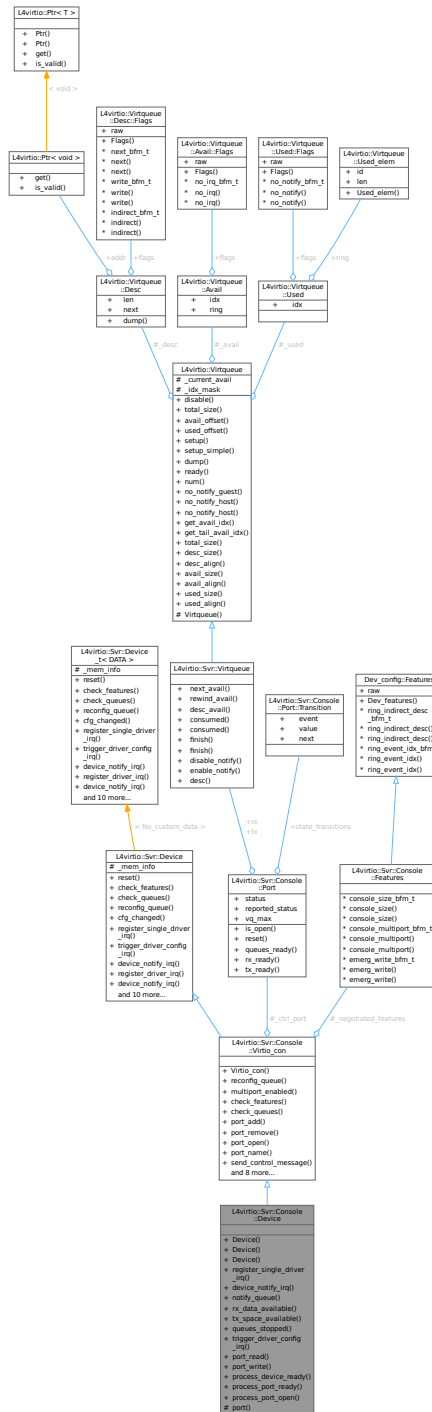

Base class implementing a virtio console device with L4Re-based notification handling.

```
#include <virtio-console-device>
```

Inheritance diagram for L4virtio::Svr::Console::Device:

Collaboration diagram for L4virtio::Svr::Console::Device:

Public Member Functions

- **Device** (unsigned vq_max)
Create a new console device.
- **Device** (unsigned vq_max, unsigned ports)
Create a new console device.
- **Device** (cxx::static_vector< unsigned > const &vq_max_nums)

- Create a new console [Device](#).
- void **register_single_driver_irq** () override
callback for registering a single guest IRQ for all queues (old-style)
- [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** () const override
callback to gather the device notification IRQ (old-style)
- void **notify_queue** ([Virtqueue](#) *queue) override
Notify queue of available data.
- virtual void **rx_data_available** (unsigned [port](#))=0
Callback to notify that new data is available to be read from port.
- virtual void **tx_space_available** (unsigned [port](#))=0
Callback to notify that data can be written to port.
- virtual bool **queues_stopped** ()
Return true, if the queues should not be processed further.
- void **trigger_driver_config_irq** () override
callback for triggering configuration change notification IRQ
- unsigned **port_read** (char *buf, unsigned len, unsigned [port](#)=0)
Read data from port.
- unsigned **port_write** (char const *buf, unsigned len, unsigned [port](#)=0)
Write data to port.
- void **process_device_ready** ([l4_uint16_t](#) value) override
Callback called on `DEVICE_READY` event.
- void **process_port_ready** ([l4_uint32_t](#) id, [l4_uint16_t](#) value) override
Callback called on `PORT_READY` event.
- virtual void **process_port_open** ([l4_uint32_t](#) id, [l4_uint16_t](#) value)
Callback called on `PORT_OPEN` event.

Public Member Functions inherited from [L4virtio::Svr::Console::Virtio_con](#)

- [Virtio_con](#) (unsigned max_ports, bool enable_multiport)
Create a new multiport console device.
- int **reconfig_queue** (unsigned index) override
callback for client queue-config request
- bool **multiport_enabled** () const
Return true if the multiport feature is enabled and control queues are available.
- bool **check_features** (void) override
callback for checking the subset of accepted features
- bool **check_queues** () override
callback for checking if the queues at `DRIVER_OK` transition
- int **port_add** (unsigned idx)
Send a `DEVICE_ADD` message and update the internal state.
- int **port_remove** (unsigned idx)
Send a `DEVICE_REMOVE` message and update the internal state.
- int **port_open** (unsigned idx, bool open)
Send a `PORT_OPEN` message and update the internal state.
- int **port_name** (unsigned idx, char const *name)
Send a `PORT_NAME` message to announce the port name.
- int **send_control_message** ([l4_uint32_t](#) idx, [l4_uint16_t](#) event, [l4_uint16_t](#) value=0, const char *name=0)
Send control message to driver.
- int **handle_control_message** ()
Handle control message received from the driver.
- void **reset** () override
reset callback, called for doing a device reset
- virtual void **reset_device** ()
Reset the state of the actual console device.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)
Make a device for the given config.
- **Mem_list** const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** (Virtqueue *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< Ds_vector const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- **Port** * **port** (unsigned idx) override
Return the specified port.

Additional Inherited Members

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- **Mem_list** **mem_info**
Memory region list.

16.404.1 Detailed Description

Base class implementing a virtio console device with L4Re-based notification handling.

This console device is derived from [Virtio_con](#) and already includes functionality to handle interrupts and notify drivers. If an interrupt is received, all the necessary interaction with the virtqueues is performed and only the actual data processing has to be done by the derived class. By default all available ports are added and an "open"-request of a port by the driver is automatically acknowledged. The derived class can optionally change this behaviour by overriding [process_device_ready\(\)](#), [process_port_ready\(\)](#) and [process_port_open\(\)](#).

This class provides a stream-based interface to access the port data with edge-triggered notification callbacks. If a port receives data from the driver the derived class is notified with the [rx_data_available\(\)](#) callback. The actual data can be retrieved by [port_read\(\)](#). If there was not enough data to be read, the call will return the available partial data. Only then will the [rx_data_available\(\)](#) callback be triggered again.

Data on a port may be transmitted by [port_write\(\)](#). If there were not enough buffers available, only a part of the data will be transmitted. Once there are new buffers available, the [tx_space_available\(\)](#) callback will be invoked. This callback will be called again only after a previous [port_write\(\)](#) was not able to send all requested data.

Use this class as a base to provide your own high-level console device. You must derive from this class as well as [L4::Epiface_t<..., L4virtio::Device>](#). For a working device the [irq_iface\(\)](#) must be registered too. A typical implementation might look like the following:

```
class My_console
: public L4virtio::Svr::Console::Device,
  public L4::Epiface_t<My_console, L4virtio::Device>
{
public:
    My_console(L4Re::Util::Object_registry *r)
        : L4virtio::Svr::Console::Device(0x100)
        {
            init_mem_info(4);
            L4Re::chkcap(r->register_irq_obj(irq_iface()), "virtio notification IRQ");
        }

    void rx_data_available(unsigned port) override
    {
        // call port_read() to fetch available data
    }

    void tx_space_available(unsigned port) override
    {
        // can call port_write() to send (pending) data
    }
};

My_console console(registry);
registry->register_obj(&console, ...);
```

The maximum number of memory regions ([init_mem_info\(\)](#)) should correlate with the number of supported ports.

Definition at line 118 of file [virtio-console-device](#).

16.404.2 Constructor & Destructor Documentation

16.404.2.1 Device() [1/3]

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max) [inline], [explicit]
```

Create a new console device.

Parameters

<i>vq_max</i>	Maximum number of buffers in data queues.
---------------	---

Create a console device with no multiport support, i.e. control queues are disabled.

Definition at line 145 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio_con::Virtio_con\(\)](#).

Here is the call graph for this function:

16.404.2.2 Device() [2/3]

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max,
    unsigned ports) [inline], [explicit]
```

Create a new console device.

Parameters

<i>vq_max</i>	Maximum number of buffers in data queues.
<i>ports</i>	Number of ports (maximum 32).

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 163 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio_con::Virtio_con\(\)](#).

Here is the call graph for this function:

16.404.2.3 Device() [3/3]

```
L4virtio::Svr::Console::Device::Device (
    cxx::static_vector< unsigned > const & vq_max_nums) [inline], [explicit]
```

Create a new console [Device](#).

Parameters

<code>vq_max_nums</code>	Maximum number of buffers in data queues, given as a <code>cx::static_vector</code> with one entry per port.
--------------------------	--

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 182 of file `virtio-console-device`.

References `L4virtio::Svr::Console::Virtio_con::Virtio_con()`.

Here is the call graph for this function:

16.404.3 Member Function Documentation

16.404.3.1 notify_queue()

```
void L4virtio::Svr::Console::Device::notify_queue (
    Virtqueue * queue) [inline], [override], [virtual]
```

Notify queue of available data.

Parameters

<code>queue</code>	<code>Virtqueue</code> to notify.
--------------------	-----------------------------------

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implements `L4virtio::Svr::Console::Virtio_con`.

Definition at line 202 of file `virtio-console-device`.

References `L4VIRTIO_IRQ_STATUS_VRING`, and `L4virtio::Virtqueue::no_notify_guest()`.

Here is the call graph for this function:

16.404.3.2 port()

```
Port * L4virtio::Svr::Console::Device::port (
    unsigned port) [inline], [override], [protected], [virtual]
```

Return the specified port.

Parameters

<i>port</i>	Port number.
-------------	--------------

Precondition

Port number must be lower than the configured maximum number of ports.

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 450 of file [virtio-console-device](#).

Referenced by [port_read\(\)](#), [port_write\(\)](#), [process_port_ready\(\)](#), [rx_data_available\(\)](#), and [tx_space_available\(\)](#).

Here is the caller graph for this function:

16.404.3.3 port_read()

```
unsigned L4virtio::Svr::Console::Device::port_read (  
    char * buf,  
    unsigned len,  
    unsigned port = 0) [inline]
```

Read data from port.

Will read up to *len* bytes from *port* into *buf*. Returns the number of bytes read, which may be less if not enough data was available. If all data was read, the [rx_data_available\(\)](#) callback will be invoked the next time the driver queues new data for the port. The callback won't be called again until all data was consumed again.

Parameters

<i>buf</i>	The destination buffer
<i>len</i>	Size of the buffer
<i>port</i>	Port index to read data from

Returns

Number of bytes read

Definition at line 272 of file [virtio-console-device](#).

Here is the call graph for this function:

16.404.3.4 port_write()

```
unsigned L4virtio::Svr::Console::Device::port_write (
    char const * buf,
    unsigned len,
    unsigned port = 0) [inline]
```

Write data to port.

Will write up to *len* bytes to *port* from *buf*. Returns the number of bytes written, which may be less if not enough virtio buffers were available. If not all data could be written, the [tx_space_available\(\)](#) callback will be invoked the next time the driver queues new receive buffers for the port. The callback won't be called again until all receive buffers were filled again.

Parameters

<i>buf</i>	The source buffer
<i>len</i>	Size of the buffer
<i>port</i>	Port index to write data to

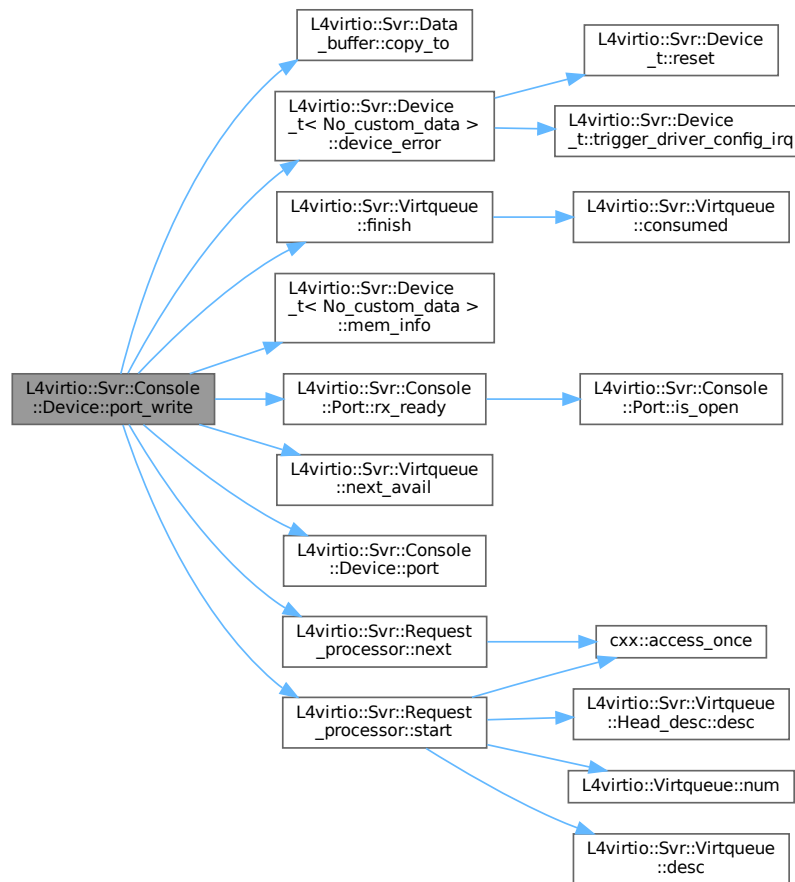

Returns

Number of bytes written

Definition at line [341](#) of file [virtio-console-device](#).

References [L4virtio::Svr::Data_buffer::copy_to\(\)](#), [L4virtio::Svr::Device_t< No_custom_data >::device_error\(\)](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Data_buffer::left](#), [L4virtio::Svr::Device_t< No_custom_data >::mem_info\(\)](#), [L4virtio::Svr::Request_processor::next\(\)](#), [L4virtio::Svr::Virtqueue::next_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Data_buffer::pos](#), [L4virtio::Svr::Console::Port::rx](#), [L4virtio::Svr::Console::Port::rx_ready\(\)](#), and [L4virtio::Svr::Request_processor::start\(\)](#).

Here is the call graph for this function:

16.404.3.5 process_device_ready()

```
void L4virtio::Svr::Console::Device::process_device_ready (
    uint16_t value) [inline], [override], [virtual]
```

Callback called on DEVICE_READY event.

Parameters

<i>value</i>	The value field of the control message, indicating if the initialization was successful.
--------------	--

By default, this function adds all ports if the driver indicates successful initialization. Override this function to perform custom actions for a DEVICE_READY event. It is then your responsibility to inform the driver about usable ports, see [port_add\(\)](#).

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 399 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio_con::port_add\(\)](#).

Here is the call graph for this function:

16.404.3.6 process_port_open()

```
virtual void L4virtio::Svr::Console::Device::process_port_open (
    14_uint32_t id,
    14_uint16_t value) [inline], [virtual]
```

Callback called on PORT_OPEN event.

Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the port was opened or closed.

The default implementation does nothing. Override it to implement some custom logic to respond to open/close events of the driver.

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 443 of file [virtio-console-device](#).

16.404.3.7 process_port_ready()

```
void L4virtio::Svr::Console::Device::process_port_ready (
    14_uint32_t id,
    14_uint16_t value) [inline], [override], [virtual]
```

Callback called on PORT_READY event.

Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the initialization was successful.

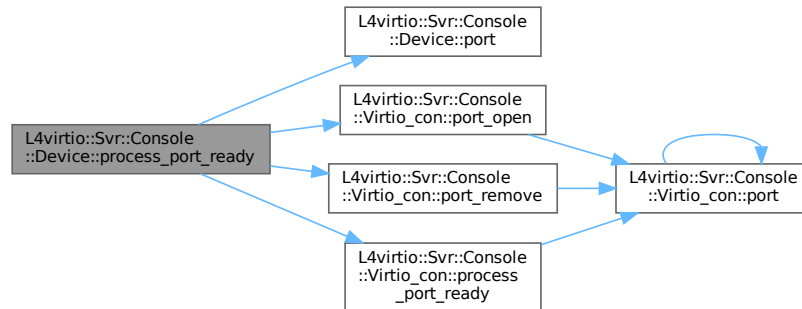

By default, this function opens the port if the driver is ready. Otherwise, the port is removed if the driver failed to set it up correctly. Override this function to perform custom actions for a PORT_READY event, *after* the generic management of the base class. It is then your responsibility to inform the driver about connected or unusable ports. See [port_open\(\)](#) and [port_remove\(\)](#).

Reimplemented from [L4virtio::Svr::Console::Virtio_con](#).

Data Structures

- struct [Transition](#)

State transition from last report state to current state.

Public Types

- enum [Port_status](#) {
 [Port_disabled](#) = 0 , [Port_added](#) , [Port_ready](#) , [Port_open](#) ,
 [Port_failed](#) , [Port_num_states](#) }

Possible states of a virtio console port.

- enum
Size of control queues, also used as default size.

Public Member Functions

- bool **is_open** () const
Check that the port is open.
- virtual void **reset** ()
Reset the port to the initial state and disable its virtqueues.
- bool **queues_ready** () const
Check that both virtqueues are set up correctly.
- bool **rx_ready** () const
Check that device implementation may write to receive queues.
- bool **tx_ready** () const
Check that device implementation may read from transmit queues.

Data Fields

- [Virtqueue](#) **tx**
Receiveq of the port.
- [Virtqueue](#) **rx**
Transmitq of the port.
- [Port_status](#) **status**
State the port is in.
- [Port_status](#) **reported_status**
State the port was last reported.
- unsigned **vq_max**
Maximum queue sizes for this port.

Static Public Attributes

- static constexpr [Transition](#) **state_transitions** [[Port_num_states](#)][[Port_num_states](#)]
State transition table from last report state to current state.

16.407.3 Field Documentation

16.407.3.1 state_transitions

```
Transition L4virtio::Svr::Console::Port::state_transitions[Port_num_states][Port_num_states]  
[static], [constexpr]
```

State transition table from last report state to current state.

Not all transitions can be made directly. For example, if the last reported state was `Port_disabled` and the current state is `Port_open`, the device has to send two messages: `Control_message::Device_add` and `Control_message::Port_open`. This is expressed by going through an intermediate state (`Port_ready`) on the reporting side.

For the purpose of the driver there are only three coarse states:

1. The port does not exist (`Port_disabled`).
2. The port exists but is closed on the device side (`Port_added`, `Port_ready`, `Port_failed`).
3. The port exists and is open on the device side (`Port_open`).

The state transition table with `Port_added`, `Port_ready` and `Port_failed` as current state are thus identical.

Definition at line 195 of file `virtio-console`.

The documentation for this struct was generated from the following file:

- `l4/l4virtio/server/virtio-console`

16.408 L4virtio::Svr::Console::Port::Transition Struct Reference

State transition from last report state to current state.

```

16.409 L4virtio::Svr::Console::Virtio_con Class Reference

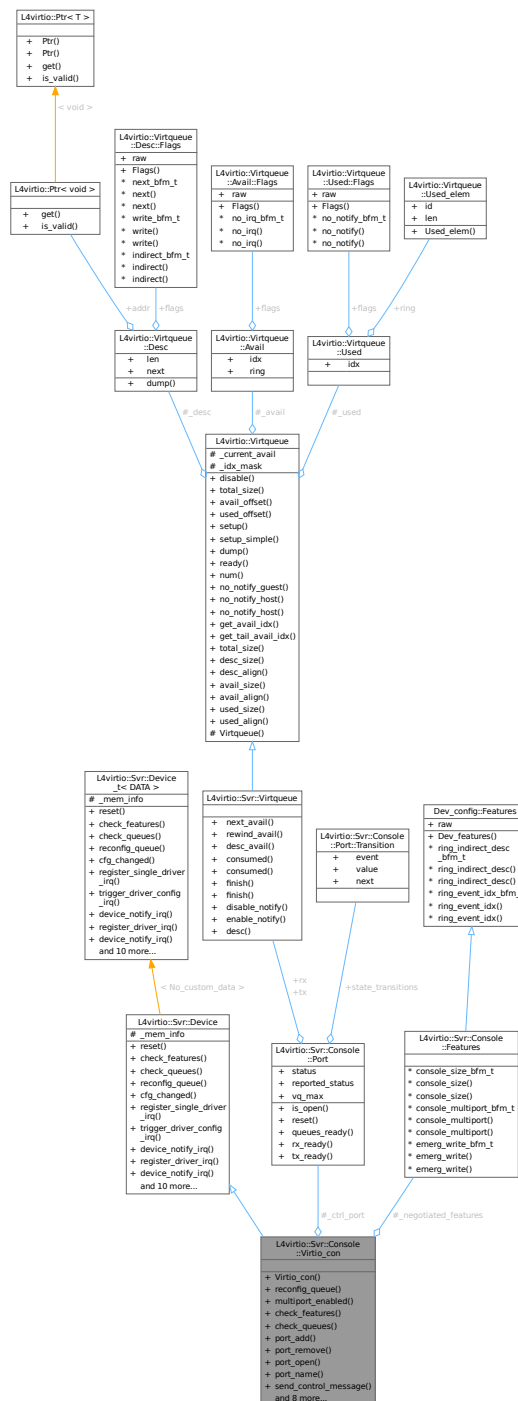

Base class implementing a virtio console functionality.

```
#include <virtio-console>
```

Inheritance diagram for L4virtio::Svr::Console::Virtio_con:

Collaboration diagram for L4virtio::Svr::Console::Virtio_con:

Public Member Functions

- **Virtio_con** (unsigned max_ports, bool enable_multiport)
Create a new multiport console device.
- int **reconfig_queue** (unsigned index) override
callback for client queue-config request
- bool **multiport_enabled** () const

- Return true if the multiport feature is enabled and control queues are available.*

 - bool **check_features** (void) override
callback for checking the subset of accepted features
 - bool **check_queues** () override
callback for checking if the queues at DRIVER_OK transition
 - int **port_add** (unsigned idx)
Send a DEVICE_ADD message and update the internal state.
 - int **port_remove** (unsigned idx)
Send a DEVICE_REMOVE message and update the internal state.
 - int **port_open** (unsigned idx, bool open)
Send a PORT_OPEN message and update the internal state.
 - int **port_name** (unsigned idx, char const *name)
Send a PORT_NAME message to announce the port name.
 - int **send_control_message** (l4_uint32_t idx, l4_uint16_t event, l4_uint16_t value=0, const char *name=0)
Send control message to driver.
 - int **handle_control_message** ()
Handle control message received from the driver.
 - void **reset** () override
reset callback, called for doing a device reset
 - virtual void **reset_device** ()
Reset the state of the actual console device.
 - virtual void **notify_queue** (Virtqueue *queue)=0
Notify queue of available data.
 - virtual Port * **port** (unsigned port)=0
Return the specified port.
 - virtual void **process_device_ready** (l4_uint16_t value)=0
Callback called on DEVICE_READY event.
 - virtual void **process_port_ready** (l4_uint32_t id, l4_uint16_t value)
Callback called on PORT_READY event.
 - virtual void **process_port_open** (l4_uint32_t id, l4_uint16_t value)=0
Callback called on PORT_OPEN event.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_single_driver_irq** ()
callback for registering a single guest IRQ for all queues (old-style)
- virtual void **trigger_driver_config_irq** ()=0
callback for triggering configuration change notification IRQ
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const
callback to gather the device notification IRQ (old-style)
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)
Make a device for the given config.

- `Mem_list` const * `mem_info` () const
Get the memory region list used for this device.
- void `reset_queue_config` (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void `init_mem_info` (unsigned num)
Initialize the memory region list to the given maximum.
- void `device_error` ()
Transition device into `DEVICE_NEEDS_RESET` state.
- bool `setup_queue` (`Virtqueue` *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool `handle_mem_cmd_write` ()
Check for a value in the `cmd` register and handle a write.
- void `enable_trusted_ds_validation` ()
Enable trusted dataspace validation.
- void `add_trusted_dataspaces` (std::shared_ptr< Ds_vector const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Additional Inherited Members

Protected Attributes inherited from `L4virtio::Svr::Device_t< No_custom_data >`

- `Mem_list` _mem_info
Memory region list.

16.409.1 Detailed Description

Base class implementing a virtio console functionality.

It is possible to activate the MULTIPORT feature, in which case incoming control messages need to be dispatched by calling `handle_control_message()`. The derived class must additionally override `process_device_ready()`, `process_port_ready()` and `process_port_open()` to implement the actual behaviour. The derived class has the following responsibilities:

- inform the driver about usable ports once the device is ready as signaled in `process_device_ready()`, see the wrapper `port_add()`.
- inform the driver about unusable ports, see the wrapper `port_remove()`.
- react to open/close events, see the wrapper `port_open()`.

This implementation provides no means to handle interrupts or notify guests, therefore derived classes have to provide this functionality, see `notify_queue()` and `handle_control_message()`. Similarly, all interaction with data queues has to be implemented. Memory for port structures must be managed by the implementor as well.

Use this class as a base to implement your own specific console device.

Definition at line 267 of file `virtio-console`.

16.409.2 Constructor & Destructor Documentation

16.409.2.1 Virtio_con()

```
L4virtio::Svr::Console::Virtio_con::Virtio_con (
    unsigned max_ports,
    bool enable_multiport) [inline], [explicit]
```

Create a new multiport console device.

Parameters

<i>max_ports</i>	Maximum number of ports the device should be able to handle (ignored when <code>enable_multiport</code> is false).
<i>enable_multiport</i>	Enable the control queue for dynamic handling of ports.

Definition at line 293 of file [virtio-console](#).

16.409.3 Member Function Documentation

16.409.3.1 `handle_control_message()`

```
int L4virtio::Svr::Console::Virtio_con::handle_control_message () [inline]
```

Handle control message received from the driver.

Return values

<code>L4_EOK</code>	Message has been handled.
<code>-L4_ENODEV</code>	Control queue is not ready.
<code>-L4_EINVAL</code>	Received an unexpected control event.

This function performs the basic handling of control messages from the driver. It does all necessary work with the control queues and performs some sanity checks. All other work is deferred to the derived class, see `process_device_ready()`, `process_port_ready()` and `process_port_open()`.

Definition at line 536 of file `virtio-console`.

References `L4virtio::Svr::Console::Control_message::Device_ready`, `L4virtio::Svr::Console::Control_message::event`, `L4virtio::Svr::Virtqueue::finish()`, `L4virtio::Svr::Console::Control_message::id`, `L4_EINVAL`, `L4_ENODEV`, `L4_EOK`, `L4virtio::Svr::Console::Control_request::len`, `L4virtio::Svr::Console::Control_request::msg`, `L4virtio::Svr::Virtqueue::next_avail()`, `L4virtio::Svr::Console::Port::Port_disabled`, `L4virtio::Svr::Console::Control_message::Port_open`, `L4virtio::Svr::Console::Port::Port_op`, `L4virtio::Svr::Console::Control_message::Port_ready`, `process_device_ready()`, `process_port_open()`, `process_port_ready()`, `L4virtio::Virtqueue::ready()`, `L4virtio::Svr::Request_processor::start()`, and `L4virtio::Svr::Console::Control_message::value`.

Here is the call graph for this function:

16.409.3.2 notify_queue()

```
virtual void L4virtio::Svr::Console::Virtio_con::notify_queue (
    Virtqueue * queue) [pure virtual]
```

Notify queue of available data.

Parameters

<i>queue</i>	Virtqueue to notify.
--------------	--------------------------------------

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implemented in [L4virtio::Svr::Console::Device](#).

16.409.3.3 port()

```
virtual Port * L4virtio::Svr::Console::Virtio_con::port (
    unsigned port) [pure virtual]
```

Return the specified port.

Parameters

<i>port</i>	Port number.
-------------	------------------------------

Precondition

[Port](#) number must be lower than the configured maximum number of ports.

Implemented in [L4virtio::Svr::Console::Device](#).

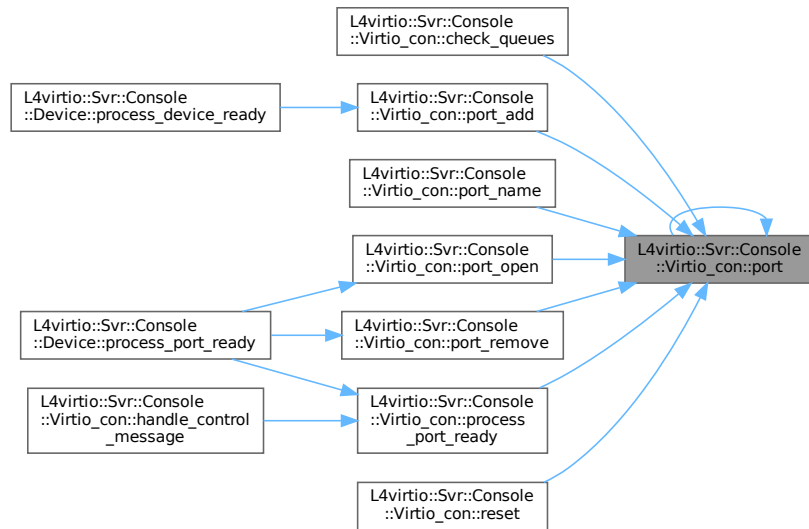

References [port\(\)](#).

Referenced by [check_queues\(\)](#), [port\(\)](#), [port_add\(\)](#), [port_name\(\)](#), [port_open\(\)](#), [port_remove\(\)](#), [process_port_ready\(\)](#), and [reset\(\)](#).

16.409.3.4 port_add()

```
int L4virtio::Svr::Console::Virtio_con::port_add (
    unsigned idx) [inline]
```

Send a DEVICE_ADD message and update the internal state.

Parameters

<i>idx</i>	Port that should be added.
------------	----------------------------

Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Invalid state transition.

Precondition

idx must be smaller than the configured number of ports.

Port must not already exist.

Definition at line 379 of file [virtio-console](#).

References [L4_EOK](#), [L4_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port_added](#), [L4virtio::Svr::Console::Port::Port_disabled](#), and [L4virtio::Svr::Console::Port::status](#).

16.409.3.5 port_name()

```
int L4virtio::Svr::Console::Virtio_con::port_name (
    unsigned idx,
    char const * name) [inline]
```

Send a PORT_NAME message to announce the port name.

Parameters

<i>idx</i>	Port that should be opened or closed.
<i>name</i>	The port name

Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Control message is not allowed in the current state.

Returns

Errors from [send_control_message\(\)](#)

Precondition

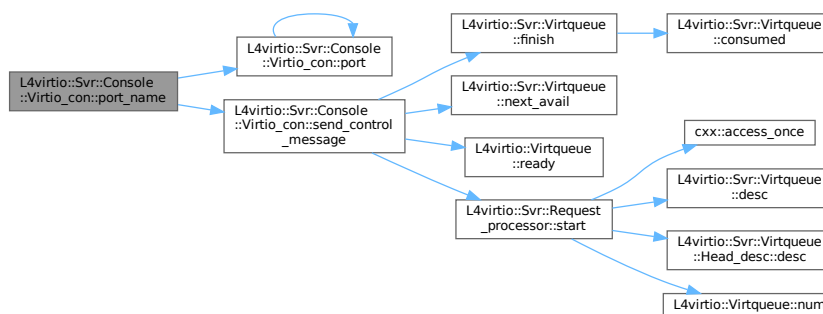

`idx` must be smaller than the configured number of ports.

[Port](#) must already exist.

Definition at line 455 of file [virtio-console](#).

**16.409.3.6 port_open()**

```
int L4virtio::Svr::Console::Virtio_con::port_open (
    unsigned idx,
    bool open) [inline]
```

Send a PORT_OPEN message and update the internal state.

Parameters

<i>idx</i>	Port that should be opened or closed.
<i>open</i>	Open or close port.

Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Invalid state transition.

Precondition

`idx` must be smaller than the configured number of ports.

[Port](#) must be ready when opening or open when closing.

Definition at line 428 of file [virtio-console](#).

**16.409.3.7 port_remove()**

```
int L4virtio::Svr::Console::Virtio_con::port_remove (
    unsigned idx) [inline]
```

Send a `DEVICE_REMOVE` message and update the internal state.

Parameters

<code>idx</code>	Port that should be removed.
------------------	--

Return values

<code>L4_EOK</code>	Message has been sent.
<code>-L4_EPERM</code>	Invalid state transition.

Precondition

`idx` must be smaller than the configured number of ports.

`Port` must already exist.

Definition at line 403 of file `virtio-console`.

References `L4_EOK`, `L4_EPERM`, `port()`, `L4virtio::Svr::Console::Port::Port_disabled`, and `L4virtio::Svr::Console::Port::status`.

Here is the call graph for this function:

Here is the caller graph for this function:

**16.409.3.8 process_device_ready()**

```
virtual void L4virtio::Svr::Console::Virtio_con::process_device_ready (
    l4_uint16_t value) [pure virtual]
```

Callback called on `DEVICE_READY` event.

Parameters

<i>value</i>	The value field of the control message, indicating if the initialization was successful.
--------------	--

Needs to be overridden by the derived class if the MULTIPOINT feature is enabled. Control messages may be sent only after the driver has successfully initialized the device.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle_control_message\(\)](#).

Here is the caller graph for this function:

16.409.3.9 process_port_open()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_open (
    l4_uint32_t id,
    l4_uint16_t value) [pure virtual]
```

Callback called on PORT_OPEN event.

Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the port was opened or closed.

Signal that an application has opened the port. Can to be overridden by the derived class if the MULTIPOINT feature is enabled.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle_control_message\(\)](#).

Here is the caller graph for this function:

16.409.3.10 process_port_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_ready (
    14_uint32_t id,
    14_uint16_t value) [inline], [virtual]
```

Callback called on PORT_READY event.

Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the initialization was successful.

May be overridden by the derived class if the MULTIPORT feature is enabled. This default implementation just sets the status of the port according to the driver message.

Reimplemented in [L4virtio::Svr::Console::Device](#).

Definition at line 698 of file [virtio-console](#).

References [port\(\)](#), [L4virtio::Svr::Console::Port::Port_added](#), [L4virtio::Svr::Console::Port::Port_failed](#), [L4virtio::Svr::Console::Port::Port_ready](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [handle_control_message\(\)](#), and [L4virtio::Svr::Console::Device::process_port_ready\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.409.3.11 reset_device()

```
virtual void L4virtio::Svr::Console::Virtio_con::reset_device () [inline], [virtual]
```

Reset the state of the actual console device.

This callback is called at the end of `reset ()`, allowing the derived class to reset internal state.

Definition at line 652 of file `virtio-console`.

Referenced by `reset()`.

Here is the caller graph for this function:

**16.409.3.12 send_control_message()**

```
int L4virtio::Svr::Console::Virtio_con::send_control_message (
    14_uint32_t idx,
    14_uint16_t event,
    14_uint16_t value = 0,
    const char * name = 0) [inline]
```

Send control message to driver.

Parameters

<i>idx</i>	Port number.
<i>event</i>	Kind of control event.
<i>value</i>	Extra information for the event.
<i>name</i>	Name to be used for Port_name message

Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_ENODEV</i>	Control queue is not ready.
<i>-L4_EBUSY</i>	Currently no descriptor available in the control queue.
<i>-L4_ENOMEM</i>	Client-issued descriptor too small. Device will be set to failed state.

Precondition

`port` must be smaller than the configured number of ports.

The convenience functions `port_add()`, `port_remove()` and `port_open()` should cover the most use cases and are the preferred way of communication with the driver. If you use this function directly, it is your responsibility to guarantee no invalid control messages are sent to the driver.

Definition at line 487 of file `virtio-console`.

16.410.2 Constructor & Destructor Documentation

16.410.2.1 Data_buffer()

```
template<typename T>
L4virtio::Svr::Data_buffer::Data_buffer (
    T * p) [inline], [explicit]
```

Create buffer for object p.

Template Parameters

<i>T</i>	Type of object (implicit)
----------	---------------------------

Parameters

<i>p</i>	Pointer to object.
----------	--------------------

The buffer shall point to the start of the object p and the size left is sizeof(T).

Definition at line 323 of file [virtio](#).

References [left](#), and [pos](#).

16.410.3 Member Function Documentation

16.410.3.1 copy_to()

```
l4_uint32_t L4virtio::Svr::Data_buffer::copy_to (
    Data_buffer * dst,
    l4_uint32_t max = UINT_MAX) [inline]
```

Copy contents from this buffer to the destination buffer.

Parameters

<i>dst</i>	Destination buffer.
<i>max</i>	(optional) Maximum number of bytes to copy.

Returns

the number of bytes copied.

This function copies at most `max` bytes from this to `dst`. If `max` is omitted, copies the maximum number of bytes available that fit `dst`.

Definition at line 354 of file [virtio](#).

References [left](#), and [pos](#).

Referenced by [Virtio_vlan_mangle::copy_pkt\(\)](#), [L4virtio::Svr::Console::Device::port_read\(\)](#), and [L4virtio::Svr::Console::Device::port_w](#)

16.410.3.2 done()

```
bool L4virtio::Svr::Data_buffer::done () const [inline]
```

Check if there are no more bytes left in the buffer.

Returns

true if there are no more bytes left in the buffer.

Definition at line 388 of file [virtio](#).

References [left](#).

16.410.3.3 set()

```
template<typename T>
void L4virtio::Svr::Data_buffer::set (
    T * p) [inline]
```

Set buffer for object p.

Template Parameters

<i>T</i>	Type of object (implicit)
----------	---------------------------

Parameters

<i>p</i>	Pointer to object.
----------	--------------------

The buffer shall point to the start of the object p and the size left is sizeof(T).

Definition at line 337 of file [virtio](#).

References [left](#), and [pos](#).

16.410.3.4 skip()

```
l4_uint32_t L4virtio::Svr::Data_buffer::skip (
    l4_uint32_t bytes) [inline]
```

Skip given number of bytes in this buffer.

Parameters

<i>bytes</i>	Number of bytes that shall be skipped.
--------------	--

Returns

The number of bytes skipped.

Try to skip the given number of bytes in this buffer, if there are less bytes left in the buffer that given then at most left bytes are skipped and the amount is returned.

Definition at line 375 of file [virtio](#).

References [left](#), and [pos](#).

Adds irq status bit.
- void [set_device_needs_reset](#) ()
Set DEVICE_NEEDS_RESET bit in device status register.

- bool [change_queue_config](#) ([l4_uint32_t](#) num_queues)
Setup new queue configuration.
- [l4virtio_config_queue_t](#) volatile const * [qconfig](#) (unsigned index) const
Get queue read-only config data for queue with the given index.
- void [reset_hdr](#) (bool inc_generation=false) const
Reset the config header to the initial contents.
- bool [reset_queue](#) (unsigned index, unsigned num_max, bool inc_generation=false) const
Reset queue config for the given queue.
- [l4virtio_config_hdr_t](#) const volatile * [hdr](#) () const
Get a read-only pointer to the config header.
- [L4::Cap](#)< [L4Re::Dataspace](#) > [ds](#) () const
Get data-space capability for the shared config data space.
- [l4_addr_t](#) [ds_offset](#) () const
Return the offset into the config dataspace where the device configuration starts.

16.411.1 Detailed Description

Abstraction for L4-Virtio device config memory.

Virtio defines a device configuration mechanism, L4-Virtio implements this mechanism based on shared memory a [set_status\(\)](#) and a [config_queue\(\)](#) call. This class provides an abstraction for L4-Virtio host implementations to establish such a shared memory data space and providing the necessary contents and access functions.

Definition at line 52 of file [l4virtio](#).

16.411.2 Constructor & Destructor Documentation

16.411.2.1 Dev_config() [1/2]

```
L4virtio::Svr::Dev_config::Dev_config (
    l4\_uint32\_t vendor,
    l4\_uint32\_t device,
    unsigned cfg_size,
    l4\_uint32\_t num_queues = 0) [inline]
```

Create a L4-Virtio config data space.

Parameters

<i>vendor</i>	The vendor ID to store in config header.
<i>device</i>	The device ID to store in config header.
<i>cfg_size</i>	The size of the device-specific config data in bytes.
<i>num_queues</i>	The number of queues provided by the device.

This constructor allocates a data space used for L4-virtio config attaches the data space to the local address space and writes the initial contents to the config header.

Definition at line 112 of file [l4virtio](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4Re::Env::env\(\)](#), [L4_PAGESIZE](#), [L4Re::Util::make_shared_cap\(\)](#), and [num_queues\(\)](#).

Here is the call graph for this function:

16.411.2.2 Dev_config() [2/2]

```

L4virtio::Svr::Dev_config::Dev_config (
    Cfg_cap const & cfg,
    14_addr_t cfg_offset,
    14_uint32_t vendor,
    14_uint32_t device,
    unsigned cfg_size,
    14_uint32_t num_queues = 0) [inline]
  
```

Setup an L4-Virtio config space in an existing data space.

Parameters

<i>cfg</i>	Dataspace that should hold the L4-Virtio configuration.
<i>cfg_offset</i>	Offset into the dataspace where the configuration starts.
<i>vendor</i>	The vendor ID to store in config header.
<i>device</i>	The device ID to store in config header.
<i>cfg_size</i>	The size of the device-specific config data in bytes.
<i>num_queues</i>	The number of queues provided by the device.

Definition at line 146 of file [l4virtio](#).

References [L4_PAGESIZE](#), and [num_queues\(\)](#).

Here is the call graph for this function:

16.411.3 Member Function Documentation

16.411.3.1 add_irq_status()

```
void L4virtio::Svr::Dev_config::add_irq_status (
    14_uint32_t status) [inline]
```

Adds irq status bit.

Parameters

<i>status</i>	The value to add to the irq status register.
---------------	--

This function adds the status bit to the irq status register.

Definition at line 265 of file [l4virtio](#).

References [hdr\(\)](#), and [status\(\)](#).

Here is the call graph for this function:

16.411.3.2 change_queue_config()

```
bool L4virtio::Svr::Dev_config::change_queue_config (
    14_uint32_t num_queues) [inline]
```

Setup new queue configuration.

Parameters

<code>num_queues</code>	The number of queues provided by the device.
-------------------------	--

Definition at line 286 of file [l4virtio](#).

References [L4_PAGESIZE](#), [num_queues\(\)](#), and [reset_hdr\(\)](#).

Here is the call graph for this function:

16.411.3.3 ds()

```
L4::Cap< L4Re::Dataspace > L4virtio::Svr::Dev_config::ds () const [inline]
```

Get data-space capability for the shared config data space.

Returns

Capability for the shared config data space.

Definition at line 375 of file [l4virtio](#).

16.411.3.4 get_cmd()

```
l4_uint32_t L4virtio::Svr::Dev_config::get_cmd () const [inline]
```

Get the value from the `cmd` register.

Note, the most significant eight bits are the command (0 is nothing to do). The upper eight bit are reset to zero after the command was handled.

Definition at line 230 of file [l4virtio](#).

References [hdr\(\)](#).

Here is the call graph for this function:

16.411.3.5 guest_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::guest_features (
    unsigned idx) const [inline]
```

Return a specific set of guest features.

Parameters

<i>idx</i>	Index into the guest features array.
------------	--------------------------------------

Return values

<i>The</i>	selected set of guest features.
------------	---------------------------------

This function returns a specific 32bit set of features enabled by the guest/driver. `idx` is the index in the guest features array, resp. the 32 bit set to return.

Definition at line 198 of file [l4virtio](#).

16.411.3.6 hdr()

```
l4virtio_config_hdr_t const volatile * L4virtio::Svr::Dev_config::hdr () const [inline]
```

Get a read-only pointer to the config header.

Returns

Read-only pointer to the shared config header.

Definition at line 368 of file [l4virtio](#).

Referenced by [add_irq_status\(\)](#), [get_cmd\(\)](#), [reset_cmd\(\)](#), [set_device_needs_reset\(\)](#), and [set_status\(\)](#).

Here is the caller graph for this function:

16.411.3.7 negotiated_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::negotiated_features (
    unsigned idx) const [inline]
```

Compute a specific set of negotiated features.

Parameters

<i>idx</i>	Index into the guest/host features array.
------------	---

Return values

<i>The</i>	selected set of negotiated features.
------------	--------------------------------------

This function returns a specific 32-bit set of features negotiated by the guest/driver and host/device. *idx* is the index in the guest/host features array, resp. the 32-bit set to return.

Definition at line 212 of file [l4virtio](#).

16.411.3.8 qconfig()

```
l4virtio_config_queue_t volatile const * L4virtio::Svr::Dev_config::qconfig (
    unsigned index) const [inline]
```

Get queue read-only config data for queue with the given *index*.

Parameters

<i>index</i>	The index of the queue.
--------------	-------------------------

Returns

Read-only pointer to the config of the queue with the given *index*, or NULL if *index* is out of range.

Definition at line 303 of file [l4virtio](#).

References [L4_UNLIKELY](#).

Referenced by [reset_queue\(\)](#).

Here is the caller graph for this function:

16.411.3.9 reset_cmd()

```
void L4virtio::Svr::Dev_config::reset_cmd () [inline]
```

Reset the `cmd` register after execution of a command.

This function resets the `cmd` register in order for the client to detect that the command was executed by the device.

Definition at line 241 of file [l4virtio](#).

References [hdr\(\)](#).

Here is the call graph for this function:

16.411.3.10 reset_queue()

```
bool L4virtio::Svr::Dev_config::reset_queue (
    unsigned index,
    unsigned num_max,
    bool inc_generation = false) const [inline]
```

Reset queue config for the given queue.

Parameters

<i>index</i>	The index of the queue to reset.
<i>num_max</i>	The maximum number of descriptors supported by this queue.
<i>inc_generation</i>	The config generation will be incremented when this is true.

Returns

true on success, or false when *index* is out of range.

Definition at line 345 of file [l4virtio](#).

References [L4_UNLIKELY](#), [l4virtio_config_queue_t::num](#), [l4virtio_config_queue_t::num_max](#), [qconfig\(\)](#), and [l4virtio_config_queue_t::ready](#).

Here is the call graph for this function:

16.411.3.11 set_device_needs_reset()

```
void L4virtio::Svr::Dev_config::set_device_needs_reset () [inline]
```

Set `DEVICE_NEEDS_RESET` bit in device status register.

This function sets the internal status register and also the status register in the shared memory to `DEVICE_NEEDS_RESET`.

Definition at line 276 of file [l4virtio](#).

References [hdr\(\)](#).

Here is the call graph for this function:

16.411.3.12 set_status()

```
void L4virtio::Svr::Dev_config::set_status (
    Status status) [inline]
```

Set device status register.

Parameters

<i>status</i>	The new value for the device status register.
---------------	---

This function sets the internal status register and also the status register in the shared memory to *status*.

Definition at line 253 of file [l4virtio](#).

References [hdr\(\)](#), and [status\(\)](#).

Here is the call graph for this function:

16.411.3.13 status()

```
Status L4virtio::Svr::Dev_config::status () const [inline]
```

Get current device status (trusted).

Returns

Current device status register (trusted).

The status returned by this function is value stored internally and cannot be written by the guest (i.e., the value can be taken as trusted.)

Definition at line 222 of file [l4virtio](#).

Referenced by [add_irq_status\(\)](#), and [set_status\(\)](#).

Here is the caller graph for this function:

Get the [fail_state](#) bits (6 to 7) of [raw](#).
- constexpr [fail_state_bfm_t::Ref](#) **fail_state** ()
Get a reference to the [fail_state](#) bits (6 to 7) of [raw](#).
- typedef [cxx::Bitfield](#)< decltype([raw](#)), 6, 6 > **device_needs_reset_bfm_t**

Type to access the *device_needs_reset* bits (6 to 6) of *raw*.

- constexpr [device_needs_reset_bfm_t::Val](#) **device_needs_reset** () const

Get the *device_needs_reset* bits (6 to 6) of *raw*.

- constexpr [device_needs_reset_bfm_t::Ref](#) **device_needs_reset** ()

Get a reference to the *device_needs_reset* bits (6 to 6) of *raw*.

- typedef [cxx::Bitfield](#)< decltype(*raw*), 7, 7 > **failed_bfm_t**

Type to access the *failed* bits (7 to 7) of *raw*.

- constexpr [failed_bfm_t::Val](#) **failed** () const

Get the *failed* bits (7 to 7) of *raw*.

- constexpr [failed_bfm_t::Ref](#) **failed** ()

Get a reference to the *failed* bits (7 to 7) of *raw*.

16.413.1 Detailed Description

Type of the device status register.

Definition at line 32 of file [virtio](#).

16.413.2 Member Function Documentation

16.413.2.1 running()

```
bool L4virtio::Svr::Dev_status::running () const [inline]
```

Check if the device is in running state.

Returns

true if the device is in running state.

The device is in running state when [acked\(\)](#), [driver\(\)](#), [features_ok\(\)](#), and [driver_ok\(\)](#) return true, and [device_needs_reset\(\)](#) and [failed\(\)](#) return false.

Definition at line 57 of file [virtio](#).

References [raw](#).

Public Member Functions

- virtual void **reset** ()=0
reset callback, called for doing a device reset
- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual bool **check_queues** ()=0
callback for checking if the queues at DRIVER_OK transition
- virtual int **reconfig_queue** (unsigned idx)=0
callback for client queue-config request
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_single_driver_irq** ()
callback for registering a single guest IRQ for all queues (old-style)
- virtual void **trigger_driver_config_irq** ()=0
callback for triggering configuration change notification IRQ
- virtual [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** () const
callback to gather the device notification IRQ (old-style)
- virtual void [register_driver_irq](#) (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.

- **Device_t** ([Dev_config](#) *dev_config)
Make a device for the given config.
- **Mem_list** const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< Ds_vector const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Protected Attributes

- **Mem_list** **mem_info**
Memory region list.

16.414.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Device_t< DATA >
```

Server-side L4-VIRTIO device stub.

This stub supports new-style multi-event registration (using `get_device_config()`, `bind()` and `get_device_notification_irq()`).

Definition at line 801 of file [l4virtio](#).

16.414.2 Member Function Documentation

16.414.2.1 add_trusted_dataspaces()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::add_trusted_dataspaces (
    std::shared_ptr< Ds_vector const > ds) [inline]
```

Provide a list of trusted dataspaces that can be used for validation.

Parameters

<i>ds</i>	list of trusted dataspace.
-----------	----------------------------

Definition at line 1198 of file [l4virtio](#).

16.414.2.2 device_error()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::device_error () [inline]
```

Transition device into DEVICE_NEEDS_RESET state.

This function does a full reset, sets the DEVICE_NEEDS_RESET bit in the device status register, triggering a guest config IRQ if necessary. The driver still needs to perform its own reset and initialization sequence.

Definition at line 1024 of file [l4virtio](#).

Referenced by [Virtio_switch::handle_l4virtio_port_tx\(\)](#).

Here is the caller graph for this function:

16.414.2.3 device_notify_irq()

```
template<typename DATA>
virtual L4::Cap< L4::Irq > L4virtio::Svr::Device_t< DATA >::device_notify_irq (
    unsigned idx) [inline], [virtual]
```

Callback to gather the device notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 874 of file [l4virtio](#).

16.414.2.4 handle_mem_cmd_write()

```
template<typename DATA>
bool L4virtio::Svr::Device_t< DATA >::handle_mem_cmd_write () [inline]
```

Check for a value in the `cmd` register and handle a write.

This function checks for a value in the `cmd` register and executes the command if there is any, or returns false if there was no command.

Execution of the command is signaled by a zero in the `cmd` register.

Definition at line 1154 of file [l4virtio](#).

16.414.2.5 `init_mem_info()`

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::init_mem_info (
    unsigned num) [inline]
```

Initialize the memory region list to the given maximum.

Parameters

<i>num</i>	Maximum number of memory regions that can be managed.
------------	---

Definition at line 1012 of file [l4virtio](#).

16.414.2.6 `register_driver_irq()`

```
template<typename DATA>
virtual void L4virtio::Svr::Device_t< DATA >::register_driver_irq (
    unsigned idx) [inline], [virtual]
```

Callback for registering an notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 860 of file [l4virtio](#).

16.414.2.7 `reset_queue_config()`

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::reset_queue_config (
    unsigned idx,
    unsigned num_max,
    bool inc_generation = false) [inline]
```

Trigger reset for the configuration space for queue *idx*.

Parameters

<i>idx</i>	The queue index to reset.
<i>num_max</i>	Maximum number of entries in this queue.
<i>inc_generation</i>	The config generation will be incremented when this is true.

This function resets the driver-readable configuration space for the queue with the given index. The queue configuration is reset to all 0, and the maximum number of entries in the queue is set to *num_max*.

Definition at line 1002 of file [l4virtio](#).

16.414.2.8 setup_queue()

```
template<typename DATA>
bool L4virtio::Svr::Device_t< DATA >::setup_queue (
    Virtqueue * q,
    unsigned qn,
    unsigned num_max) [inline]
```

Enable/disable the specified queue.

Parameters

<i>q</i>	Pointer to the ring that represents the virtqueue internally.
<i>qn</i>	Index of the queue.
<i>num_max</i>	Maximum number of supported entries in this queue.

Returns

true for success.

- This function calculates the parameters of the virtqueue from the clients configuration space values, checks the accessibility of the queue data structures and initializes *q* to ready state when all checks succeeded.

Definition at line 1047 of file [l4virtio](#).

Default implementation returning the Driver_mem_region.
- template<typename ARG>
void **load_desc** ([Virtqueue::Desc](#) const &desc, [Request_processor](#) const *p, ARG *data) const
Default implementation returning generic information.

16.415.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Driver_mem_list_t< DATA >
```

List of driver memory regions assigned to a single L4-VIRTIO transport instance.

Note

The regions added to this list *must* never overlap.

Definition at line 629 of file [l4virtio](#).

16.415.2 Member Function Documentation

16.415.2.1 add()

```
template<typename DATA>
Mem_region const * L4virtio::Svr::Driver_mem_list_t< DATA >::add (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds) [inline]
```

Add a new region to the list.

Parameters

<i>drv_base</i>	Driver base address of the region.
<i>size</i>	Size of the region in bytes.
<i>offset</i>	Offset within the data space attached to <i>drv_base</i> .
<i>ds</i>	Data space backing the driver memory.

Returns

A pointer to the new region.

Definition at line 669 of file [l4virtio](#).

16.415.2.2 find()

```
template<typename DATA>
Mem_region * L4virtio::Svr::Driver_mem_list_t< DATA >::find (
    l4_uint64_t base,
    l4_umword_t size) const [inline]
```

Find memory region containing the given driver address region.

Parameters

<i>base</i>	Driver base address.
<i>size</i>	Size of the region.

Returns

Pointer to the region containing the given region, NULL if none is found.

Definition at line 703 of file [l4virtio](#).

Referenced by [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#), [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#) and [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc\(\)](#).

Here is the caller graph for this function:

**16.415.2.3 full()**

```

template<typename DATA>
bool L4virtio::Svr::Driver_mem_list_t< DATA >::full () const [inline]

```

Returns

True if the remaining capacity is 0.

Definition at line 658 of file [l4virtio](#).

Referenced by [L4virtio::Svr::Driver_mem_list_t< No_custom_data >::add\(\)](#).

Here is the caller graph for this function:

16.415.2.4 init()

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::init (
    unsigned max) [inline]
```

Make a fresh list with capacity *max*.

Parameters

<i>max</i>	The capacity of this vector.
------------	------------------------------

Definition at line 650 of file [l4virtio](#).

16.415.2.5 load_desc() [1/3]

```
template<typename DATA>
template<typename ARG>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    ARG * data) const [inline]
```

Default implementation returning generic information.

Template Parameters

<i>ARG</i>	Abstract argument type used with Request_processor::start() and Request_processor::next() to deliver the result of loading a descriptor. This type must provide a constructor taking three arguments: (1) pointer to a <code>Driver_mem_region</code> , (2) the Virtqueue::Desc descriptor, and (3) a pointer to the calling Request_processor .
------------	--

Parameters

	<i>desc</i>	The descriptor to load
--	-------------	------------------------

	<i>p</i>	The request processor calling us
out	<i>data</i>	Shall be assigned to ARG(mem, desc, p)

Exceptions

<i>Bad_descriptor</i>	The descriptor address could not be translated.
---------------------------------------	---

Definition at line 764 of file [l4virtio](#).

16.415.2.6 load_desc() [2/3]

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Mem_region const ** data) const [inline]
```

Default implementation returning the Driver_mem_region.

Parameters

	<i>desc</i>	The descriptor to load
	<i>p</i>	The request processor calling us
out	<i>data</i>	Shall be set to a pointer to the Driver_mem_region that covers the descriptor.

Exceptions

<i>Bad_descriptor</i>	The descriptor address could not be translated.
---------------------------------------	---

Definition at line 737 of file [l4virtio](#).

16.415.2.7 load_desc() [3/3]

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Virtqueue::Desc const ** table) const [inline]
```

Default implementation for loading an indirect descriptor.

Parameters

	<i>desc</i>	The descriptor to load
--	-------------	------------------------

	<i>p</i>	The request processor calling us
out	<i>table</i>	Shall be set to the loaded descriptor table

Exceptions

Bad_descriptor	The descriptor address could not be translated.
--------------------------------	---

Definition at line 717 of file [l4virtio](#).

16.415.2.8 remove()

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::remove (
    Mem_region const * r) [inline]
```

Remove the given region from the list.

Parameters

<i>r</i>	The region to remove (result from add() , or find()).
----------	--

Definition at line 683 of file [l4virtio](#).

Definition at line 450 of file [l4virtio](#).

16.416.2 Constructor & Destructor Documentation

16.416.2.1 Driver_mem_region_t()

```
template<typename DATA>
L4virtio::Svr::Driver_mem_region_t< DATA >::Driver_mem_region_t (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds) [inline]
```

Make a local memory region for the given driver values.

Parameters

<i>drv_base</i>	Base address of the memory region used by the driver.
<i>size</i>	Size of the memory region.
<i>offset</i>	Offset within the data space that is mapped to <i>drv_base</i> within the driver.
<i>ds</i>	Data space capability backing the memory.

This constructor attaches the region of given data space to the local address space and stores the corresponding data for later reference.

Definition at line 498 of file [l4virtio](#).

Encapsulate the state for processing a VIRTIO request.

```
#include <virtio>
```

Inheritance diagram for L4virtio::Svr::Request_processor:

Collaboration diagram for L4virtio::Svr::Request_processor:

Public Member Functions

- `template<typename DESC_MAN, typename ... ARGS>`
`void start (DESC_MAN *dm, Virtqueue *ring, Virtqueue::Head_desc const &request, ARGS... args)`
Start processing a new request.
- `template<typename DESC_MAN, typename ... ARGS>`
`Virtqueue::Request const & start (DESC_MAN *dm, Virtqueue::Request const &request, ARGS... args)`
Start processing a new request.
- `Virtqueue::Desc::Flags current_flags () const`
Get the flags of the currently processed descriptor.
- `bool has_more () const`
Are there more chained descriptors?
- `template<typename DESC_MAN, typename ... ARGS>`
`bool next (DESC_MAN *dm, ARGS... args)`
Switch to the next descriptor in a descriptor chain.

16.417.1 Detailed Description

Encapsulate the state for processing a VIRTIO request.

A VIRTIO request is a possibly chained list of descriptors retrieved from the available ring of a virtqueue, using `Virtqueue::next_avail()`.

The descriptor processing depends on helper (DESC_MAN) for interpreting the descriptors in the context of the device implementation.

DESC_MAN has to provide the functionality to safely dereference a descriptor from a descriptor list.

The following methods must be provided by DESC_MAN:

- `DESC_MAN::load_desc (Virtqueue::Desc const &desc,`
`Request_processor const *proc,`
`Virtqueue::Desc const **table)`

This function is used to dereference `desc` as an indirect descriptor table, and must return a pointer to an indirect descriptor table.

- `DESC_MAN::load_desc(Virtqueue::Desc const &desc, Request_processor const *proc, ...)`

This function is used to dereference a descriptor as a normal data buffer, and '...' are the arguments that are passed to `start()` and `next()`.

Definition at line 472 of file [virtio](#).

16.417.2 Member Function Documentation

16.417.2.1 `current_flags()`

```
Virtqueue::Desc::Flags L4virtio::Svr::Request_processor::current_flags () const [inline]
```

Get the flags of the currently processed descriptor.

Returns

The flags of the currently processed descriptor.

Definition at line 545 of file [virtio](#).

Referenced by [L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor::get_request\(\)](#).

Here is the caller graph for this function:

16.417.2.2 `has_more()`

```
bool L4virtio::Svr::Request_processor::has_more () const [inline]
```

Are there more chained descriptors?

Returns

true if there are more chained descriptors in the current request.

Definition at line 553 of file [virtio](#).

Referenced by [L4virtio::Svr::Block_request< Ds_data >::data_size\(\)](#).

Here is the caller graph for this function:

16.417.2.3 next()

```
template<typename DESC_MAN, typename ... ARGS>
bool L4virtio::Svr::Request_processor::next (
    DESC_MAN * dm,
    ARGS... args) [inline]
```

Switch to the next descriptor in a descriptor chain.

Template Parameters

<i>DESC_MAN</i>	Type of descriptor manager (implicit).
-----------------	--

Parameters

<i>dm</i>	Descriptor manager that is used to translate VIRTIO descriptor addresses.
<i>args</i>	Extra arguments passed to dm->load_desc()

Return values

<i>true</i>	A next descriptor is available.
<i>false</i>	No descriptor available.

Exceptions

<i>Bad_descriptor</i>	The next index of this descriptor is invalid.
---------------------------------------	---

Definition at line 570 of file [virtio](#).

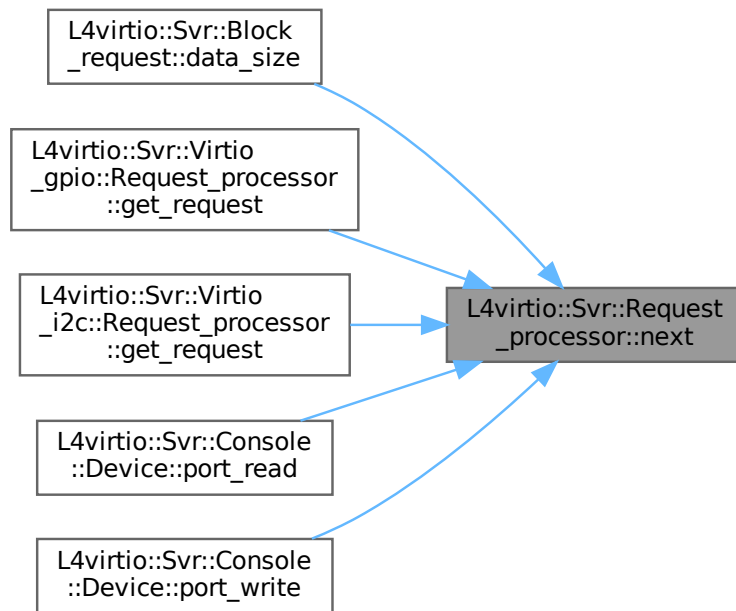

References [cxx::access_once\(\)](#), [L4virtio::Svr::Bad_descriptor::Bad_flags](#), [L4virtio::Svr::Bad_descriptor::Bad_next](#), and [L4_UNLIKELY](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.417.2.4 start() [1/2]

```

template<typename DESC_MAN, typename ... ARGS>
void L4virtio::Svr::Request_processor::start (
    DESC_MAN * dm,
    Virtqueue * ring,
    Virtqueue::Head_desc const & request,
    ARGS... args) [inline]

```

Start processing a new request.

Template Parameters

<i>DESC_MAN</i>	Type of descriptor manager (implicit).
-----------------	--

Parameters

<i>dm</i>	Descriptor manager that is used to translate VIRTIO descriptor addresses.
<i>ring</i>	VIRTIO ring of the request.
<i>request</i>	VIRTIO request from Virtqueue::next_avail()
<i>args</i>	Extra arguments passed to <code>dm->load_desc()</code>

Precondition

The given request must be valid.

Exceptions

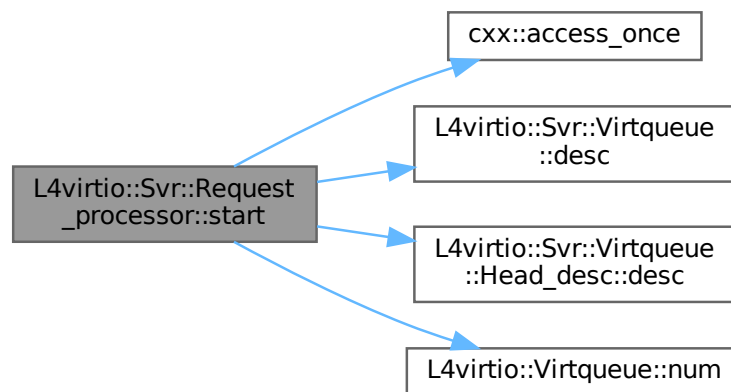

Bad_descriptor	The descriptor has an invalid size or <code>load_desc()</code> has thrown an exception by itself.
--------------------------------	---

 - Memory region list.*

16.426.1 Detailed Description

A server implementation of the virtio-scmi protocol.

Use this class as a base to implement your own specific SCMI device.

SCMI defines multiple protocols which can be optionally handled. This server implementation is flexible enough to handle any combination of them. The user of this server has to deviate from the provided [Proto](#) classes (for the protocols he want to handle) and needs to implement the required callbacks.

Right now, support for the base and the performance protocol is provided.

The base protocol is mandatory.

If you want to use this from a Uvmm Linux guest, the device tree needs to look something like this:

```

firmware {
    scmi {
        compatible = "arm,scmi-virtio";

        #address-cells = <1>;
        #size-cells = <0>;

        // ... supported protocols ...
    };
};

```

Definition at line 336 of file [virtio-scmi-device](#).

The documentation for this class was generated from the following file:

- I4/I4virtio/server/virtio-scmi-device

16.427 L4virtio::Svr::Scmi::Scmi_hdr_t Struct Reference

SCMI header.

```
#include <virtio-scmi-device>
```

Collaboration diagram for L4virtio::Svr::Scmi::Scmi_hdr_t:

L4virtio::Svr::Scmi ::Scmi_hdr_t
<ul style="list-style-type: none"> * token_bfm_t * token() * token() * protocol_id_bfm_t * protocol_id() * protocol_id() * message_type_bfm_t * message_type() * message_type() * message_id_bfm_t * message_id() * message_id()

- typedef [cxx::Bitfield](#)< decltype(hdr_raw), 18, 27 > **token_bfm_t**
Type to access the *token* bits (18 to 27) of *hdr_raw*.
- constexpr [token_bfm_t::Val](#) **token** () const
Get the *token* bits (18 to 27) of *hdr_raw*.

- constexpr [token_bfm_t::Ref](#) token ()
Get a reference to the [token](#) bits (18 to 27) of [hdr_raw](#).
- typedef [cxx::Bitfield](#)< decltype(hdr_raw), 10, 17 > **protocol_id_bfm_t**
Type to access the [protocol_id](#) bits (10 to 17) of [hdr_raw](#).
- constexpr [protocol_id_bfm_t::Val](#) protocol_id () const
Get the [protocol_id](#) bits (10 to 17) of [hdr_raw](#).
- constexpr [protocol_id_bfm_t::Ref](#) protocol_id ()
Get a reference to the [protocol_id](#) bits (10 to 17) of [hdr_raw](#).

16.428 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface > Class Template Reference

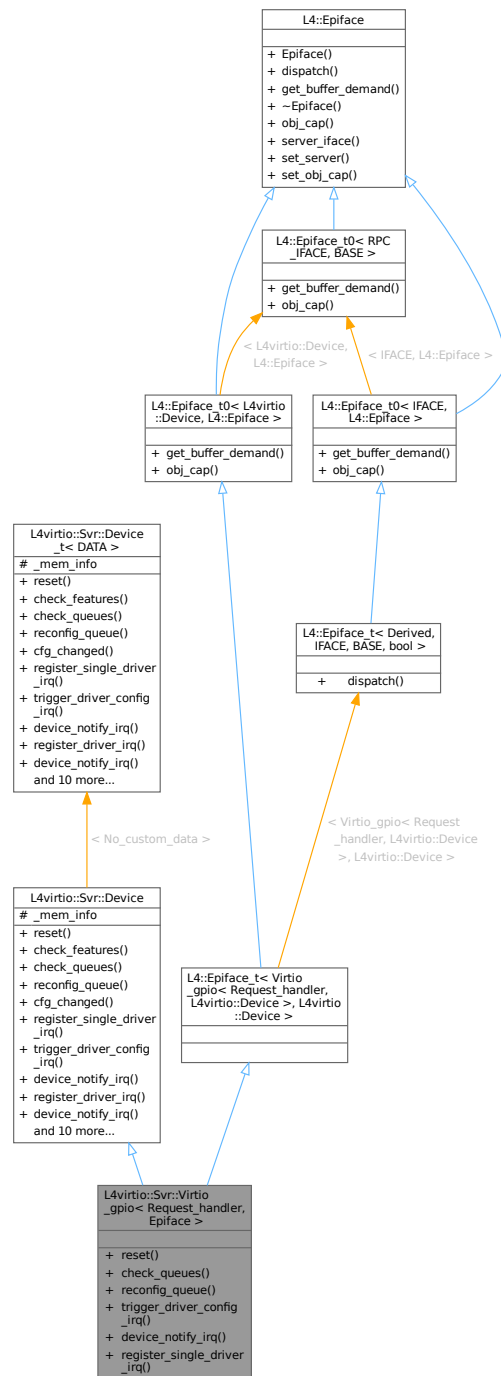

A server implementation of the virtio-gpio protocol.

```
#include <virtio-gpio-device>
```

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >:

Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface > :

Data Structures

- struct [Irq_handler](#)
Handler for an gpio pin irq.
- struct [Host_irq](#)
Handler for the host irq.
- struct [Request_processor](#)
Generic handler for the Virtio requests.

Public Member Functions

- void **reset** () override
reset callback, called for doing a device reset
- bool **check_queues** () override
callback for checking if the queues at DRIVER_OK transition
- int **reconfig_queue** (unsigned idx) override
callback for client queue-config request
- void **trigger_driver_config_irq** () override
callback for triggering configuration change notification IRQ
- [L4::Cap](#) < [L4::lrq](#) > **device_notify_irq** () const override
callback to gather the device notification IRQ (old-style)
- void **register_single_driver_irq** () override
callback for registering a single guest IRQ for all queues (old-style)

Public Member Functions inherited from [L4virtio::Svr::Device_t](#) < [No_custom_data](#) >

- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual [L4::Cap](#) < [L4::lrq](#) > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- [Device_t](#) ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr < [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from [L4::Epiface_t0](#) < [L4virtio::Device](#), [L4::Epiface](#) >

- [Type_info::Demand](#) **get_buffer_demand** () const
Get the server-side buffer demand based in IFACE.
- [Cap](#) < [L4virtio::Device](#) > **obj_cap** () const
Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()
Make a server object.
- virtual ~**Epiface** ()=0
Destroy the object.
- Stored_cap **obj_cap** () const
Get the capability to the kernel object belonging to this object.
- **Server_iface** * **server_iface** () const
Get pointer to server interface at which the object is currently registered.
- int **set_server** (**Server_iface** *srv, **Cap**< void > cap, bool managed=false)
Set server registration info for the object.
- void **set_obj_cap** (**Cap**< void > const &cap)
Deprecated server registration function.

Additional Inherited Members

Public Types inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- typedef L4virtio::Device **Interface**
Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef **lpc_svr::Server_iface** **Server_iface**
Type for abstract server interface.
- typedef **lpc_svr::Server_iface::Demand** **Demand**
Type for server-side receive buffer demand.

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- **Mem_list** **_mem_info**
Memory region list.

16.428.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >
```

A server implementation of the virtio-gpio protocol.

Template Parameters

<i>Request_handler</i>	<p>The type that is used to handle incoming requests. Needs to have:</p> <ul style="list-style-type: none"> • <code>bool get_direction(l4_uint16_t gpio, l4_uint8_t *dir)</code> • <code>bool set_direction(l4_uint16_t gpio, l4_uint8_t dir)</code> • <code>bool get_value(l4_uint16_t gpio, l4_uint8_t *val)</code> • <code>bool set_value(l4_uint16_t gpio, l4_uint8_t val)</code> • <code>bool set_irq_type(l4_uint16_t gpio, l4_uint8_t mode)</code> • <code>bool enable_irq(l4_uint16_t gpio, std::shared_ptr<Virtio_gpio::Irq_handler> const &hdl)</code> functions.
<i>Epiface</i>	The Epiface to derive from. Defaults to L4virtio::Device .

Definition at line 142 of file [virtio-gpio-device](#).

The documentation for this class was generated from the following file:

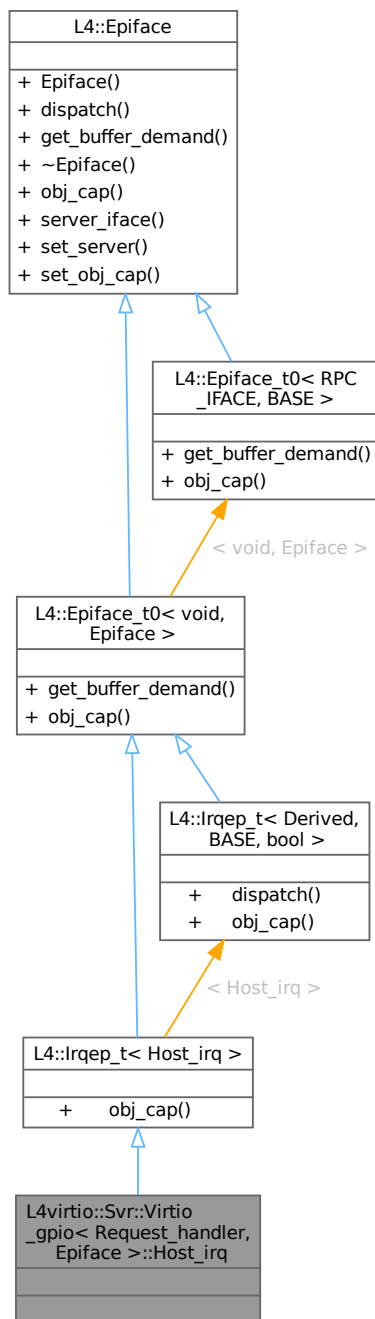

- `l4/l4virtio/server/virtio-gpio-device`

16.429 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq Struct Reference

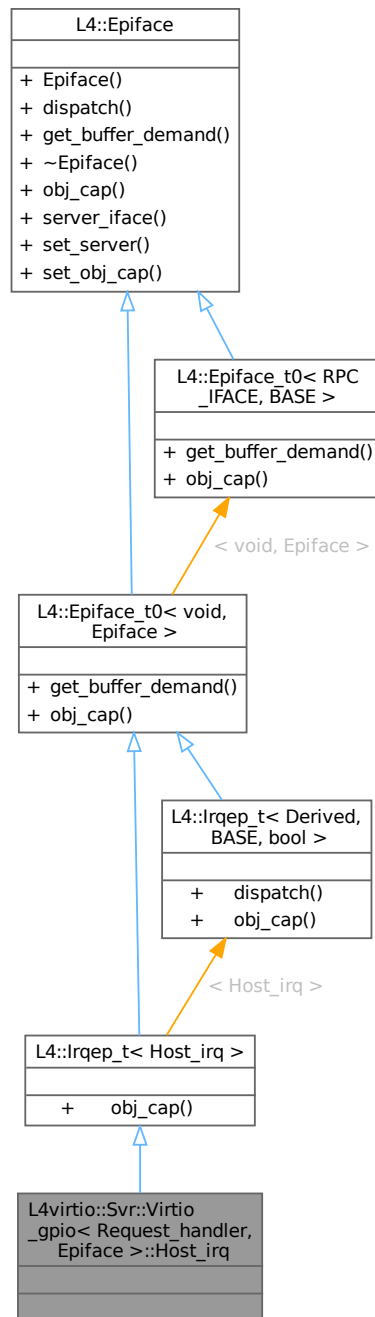

Handler for the host irq.

```
#include <virtio-gpio-device>
```

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq:

Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq:

Additional Inherited Members

Public Types inherited from **L4::Epiface_t0< void, Epiface >**

- typedef void **Interface**

Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

Public Member Functions inherited from L4::lrqep_t< Host_irq >

- [Cap< L4::lrq > obj_cap](#) () const
Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface_t0< void, Epiface >

- [Type_info::Demand](#) **get_buffer_demand** () const
Get the server-side buffer demand based in IFACE.
- [Cap< void > obj_cap](#) () const
Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()
Make a server object.
- virtual **~Epiface** ()=0
Destroy the object.
- Stored_cap [obj_cap](#) () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * [server_iface](#) () const
Get pointer to server interface at which the object is currently registered.
- int **set_server** ([Server_iface](#) *srv, [Cap< void > cap](#), bool managed=false)
Set server registration info for the object.
- void **set_obj_cap** ([Cap< void > const &cap](#))
Deprecated server registration function.

16.429.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
struct L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq
```

Handler for the host irq.

An [L4::lrqep_t](#) to handle irq's send to the server.

Definition at line 198 of file [virtio-gpio-device](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/server/virtio-gpio-device

16.430 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler Struct Reference

Handler for an gpio pin irq.

```
#include <virtio-gpio-device>
```

Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler:

16.430.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
struct L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler
```

Handler for an gpio pin irq.

This notifies the virtio client that an gpio pin irq happened or the operation was canceled.

This needs to be called by any server implementation of the [Virtio_gpio](#) class, after an irq was enabled with the enable method of the Gpio_request_handler.

Definition at line 166 of file [virtio-gpio-device](#).

The documentation for this struct was generated from the following file:

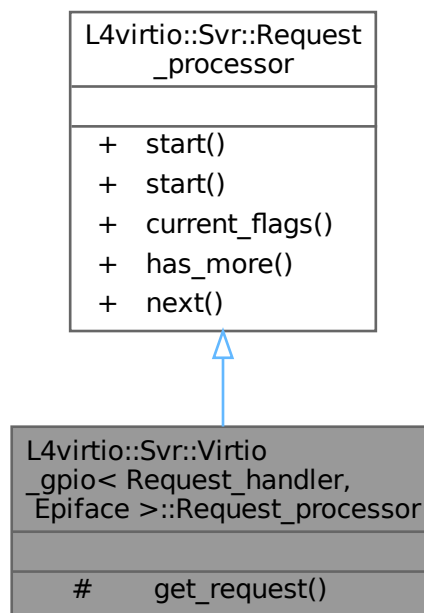

- I4/I4virtio/server/virtio-gpio-device

16.431 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor Struct Reference

Generic handler for the Virtio requests.

```
#include <virtio-gpio-device>
```

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor:

- ```
T get_request ()
```

### 16.431.1 Detailed Description

template<typename Request\_handler, typename [Epiface](#) = L4virtio::Device>  
struct L4virtio::Svr::Virtio\_gpio< Request\_handler, [Epiface](#) >::Request\_processor

Generic handler for the Virtio requests.

Definition at line 213 of file [virtio-gpio-device](#).

### 16.431.2 Member Function Documentation

#### 16.431.2.1 get\_request()

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
template<typename T>
T L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor::get_request ()
[inline], [protected]
```

The driver prepares the GPIO request in two data parts: 1st: in\_hdr 2rd: out\_hdr.

This parses the two Data\_buffers and create the Gpio\_\* structure.

Definition at line 241 of file [virtio-gpio-device](#).

References [L4virtio::Svr::Request\\_processor::current\\_flags\(\)](#), and [L4virtio::Svr::Request\\_processor::next\(\)](#).

## 16.438.1 Detailed Description

[Virtqueue](#) implementation for the device.

This class represents a single virtqueue, with a local running available index.

#### Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 87 of file [virtio](#).

## 16.438.2 Member Function Documentation

### 16.438.2.1 consumed() [1/2]

```
void L4virtio::Svr::Virtqueue::consumed (
 Head_desc const & r,
 l4_uint32_t len = 0) [inline]
```

Put the given descriptor into the used ring.

#### Parameters

|            |                                           |
|------------|-------------------------------------------|
| <i>r</i>   | Request that shall be marked as finished. |
| <i>len</i> | The total number of bytes written.        |

#### Precondition

queue must be in working state.

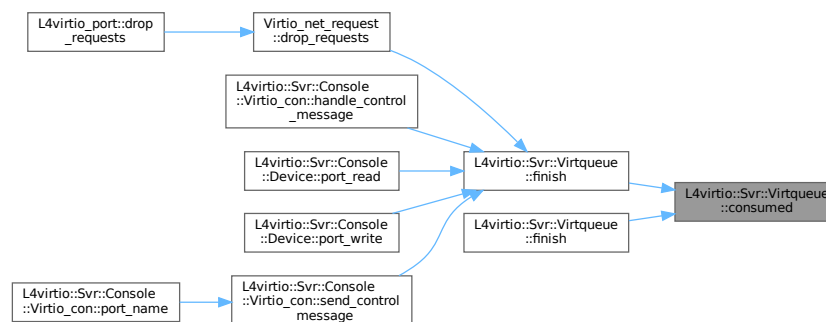

*r* must be a valid request from this queue.

Definition at line 190 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), and [L4virtio::Virtqueue::\\_used](#).

Referenced by [finish\(\)](#), and [finish\(\)](#).

Here is the caller graph for this function:

### 16.438.2.2 consumed() [2/2]

```
template<typename ITER>
void L4virtio::Svr::Virtqueue::consumed (
 ITER const & begin,
 ITER const & end) [inline]
```

Put multiple descriptors into the used ring.

A range of descriptors, specified by *begin* and *end* iterators is added. Each iterator points to a struct that has a first member that is a [Head\\_desc](#) and a second member that is the corresponding number of bytes written.

#### Template Parameters

|             |                                      |
|-------------|--------------------------------------|
| <i>ITER</i> | The type of the iterator (inferred). |
|-------------|--------------------------------------|

### Parameters

|              |                                            |
|--------------|--------------------------------------------|
| <i>begin</i> | Iterator pointing to first new descriptor. |
| <i>end</i>   | Iterator pointing to one past last entry.  |

### Precondition

queue must be in working state.

Definition at line 213 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), and [L4virtio::Virtqueue::\\_used](#).

### 16.438.2.3 desc()

```
Desc const * L4virtio::Svr::Virtqueue::desc (
 unsigned idx) const [inline]
```

Get a descriptor from the descriptor list.

### Parameters

|            |                              |
|------------|------------------------------|
| <i>idx</i> | The index of the descriptor. |
|------------|------------------------------|

### Precondition

`idx < num`

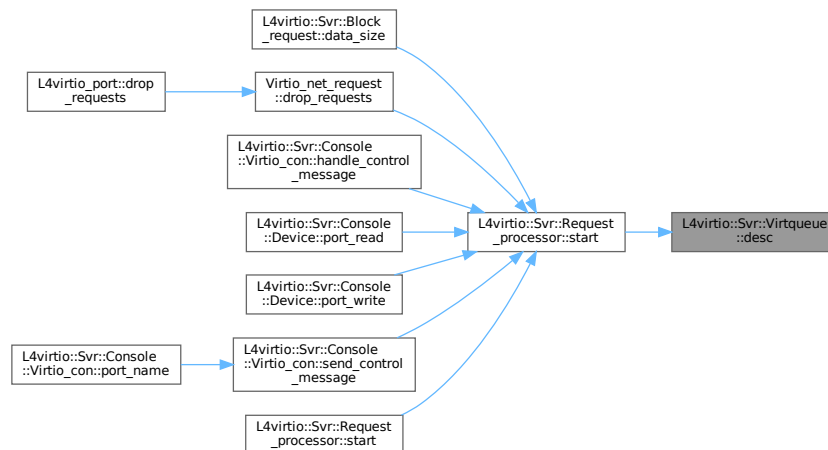

queue must be in working state

Definition at line 298 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#).

Referenced by [L4virtio::Svr::Request\\_processor::start\(\)](#).

Here is the caller graph for this function:

#### 16.438.2.4 desc\_avail()

```
bool L4virtio::Svr::Virtqueue::desc_avail () const [inline]
```

Test for available descriptors.

##### Returns

true if there are descriptors available, false if not.

##### Precondition

The queue must be in working state.

Definition at line 175 of file [virtio](#).

References [L4virtio::Virtqueue::\\_avail](#), and [L4virtio::Virtqueue::\\_current\\_avail](#).

Referenced by [Virtio\\_net\\_request::drop\\_requests\(\)](#), and [L4virtio\\_port::tx\\_work\\_pending\(\)](#).

Here is the caller graph for this function:

### 16.438.2.5 disable\_notify()

```
void L4virtio::Svr::Virtqueue::disable_notify () [inline]
```

Set the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 273 of file [virtio](#).

References [L4virtio::Virtqueue::\\_used](#), [L4\\_LIKELY](#), and [L4virtio::Virtqueue::ready\(\)](#).

Referenced by [Virtio\\_switch::handle\\_l4virtio\\_port\\_tx\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 16.438.2.6 enable\_notify()

```
void L4virtio::Svr::Virtqueue::enable_notify () [inline]
```

Clear the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 284 of file [virtio](#).

References [L4virtio::Virtqueue::\\_used](#), [L4\\_LIKELY](#), and [L4virtio::Virtqueue::ready\(\)](#).

Referenced by [Virtio\\_switch::handle\\_l4virtio\\_port\\_tx\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 16.438.2.7 finish() [1/2]

```

template<typename QUEUE_OBSERVER>
void L4virtio::Svr::Virtqueue::finish (
 Head_desc & d,
 QUEUE_OBSERVER * o,
 l4_uint32_t len = 0) [inline]

```

Add a descriptor to the used ring, and notify an observer.

#### Template Parameters

|                             |                                      |
|-----------------------------|--------------------------------------|
| <code>QUEUE_OBSERVER</code> | The type of the observer (inferred). |
|-----------------------------|--------------------------------------|

#### Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>d</code>   | descriptor of the request that is to be marked as finished. |
| <code>o</code>   | Pointer to the observer that is notified.                   |
| <code>len</code> | Number of bytes written for this request.                   |

**Precondition**

- queue must be in working state.
- d must be a valid request from this queue.

Definition at line 240 of file [virtio](#).

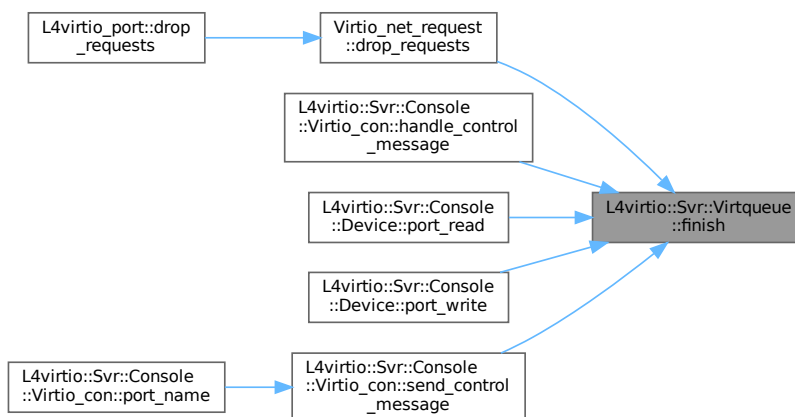

References [consumed\(\)](#).

Referenced by [Virtio\\_net\\_request::drop\\_requests\(\)](#), [L4virtio::Svr::Console::Virtio\\_con::handle\\_control\\_message\(\)](#), [L4virtio::Svr::Console::Device::port\\_read\(\)](#), [L4virtio::Svr::Console::Device::port\\_write\(\)](#), and [L4virtio::Svr::Console::Virtio\\_con::send\\_control\\_message\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.438.2.8 finish() [2/2]**

```

template<typename ITER, typename QUEUE_OBSERVER>
void L4virtio::Svr::Virtqueue::finish (
 ITER const & begin,
 ITER const & end,
 QUEUE_OBSERVER * o) [inline]

```

Add a range of descriptors to the used ring, and notify an observer once.

The iterators are passed to [consumed<ITER>\(ITER const &, ITER const &\)](#), and the requirements detailed there apply.

**Template Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| <i>ITER</i>           | type of the iterator (inferred)      |
| <i>QUEUE_OBSERVER</i> | the type of the observer (inferred). |

### Parameters

|              |                                             |
|--------------|---------------------------------------------|
| <i>begin</i> | iterator pointing to first element.         |
| <i>end</i>   | iterator pointing to one past last element. |
| <i>o</i>     | pointer to the observer that is notified.   |

### Precondition

queue must be in working state.

Definition at line 262 of file [virtio](#).

References [consumed\(\)](#).

Here is the call graph for this function:

### 16.438.2.9 next\_avail()

```
Request L4virtio::Svr::Virtqueue::next_avail () [inline]
```

Get the next available descriptor from the available ring.

### Precondition

The queue must be in working state.

### Returns

A Request for the next available descriptor, the Request is invalid if there are no descriptors in the available ring.

**Note**

The return value must be checked even when a previous `desc_avail()` returned true.

Definition at line 136 of file `virtio`.

References `L4virtio::Virtqueue::_avail`, `L4virtio::Virtqueue::_current_avail`, `L4virtio::Virtqueue::_idx_mask`, and `L4_LIKELY`.

Referenced by `Virtio_net_request::drop_requests()`, `Virtio_net_request::get_request()`, `L4virtio::Svr::Console::Virtio_con::handle_control_message`, `L4virtio::Svr::Console::Device::port_read()`, `L4virtio::Svr::Console::Device::port_write()`, and `L4virtio::Svr::Console::Virtio_con::send_control_message`.

Here is the caller graph for this function:

**16.438.2.10 rewind\_avail()**

```
void L4virtio::Svr::Virtqueue::rewind_avail (
 Head_desc const & d) [inline]
```

Return unfinished descriptors to the available ring, i.e.

reset the local next index of the available ring to the given descriptor.

**Parameters**

|          |                                                             |
|----------|-------------------------------------------------------------|
| <i>d</i> | descriptor of the request that is to be marked as finished. |
|----------|-------------------------------------------------------------|

**Precondition**

queue must be in working state.

*d* must be a valid request from this queue, obtained via `next_avail()`, that has not yet been finished, and in addition, no descriptors following it have been finished.

Definition at line 160 of file `virtio`.

References `L4virtio::Virtqueue::_current_avail`, `L4virtio::Virtqueue::_desc`, and `L4virtio::Virtqueue::_idx_mask`.

The documentation for this class was generated from the following file:

- `I4/I4virtio/server/virtio`

## 16.439 L4virtio::Svr::Virtqueue::Head\_desc Class Reference

VIRTIO request, essentially a descriptor from the available ring.

```
#include <virtio>
```

Collaboration diagram for L4virtio::Svr::Virtqueue::Head\_desc:

| L4virtio::Svr::Virtqueue<br>::Head_desc |                 |

### 16.440.1 Detailed Description

Low-level [Virtqueue](#).

This class represents a single virtqueue, with a local running available index.

#### Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 80 of file [virtqueue](#).

### 16.440.2 Member Function Documentation

#### 16.440.2.1 [avail\\_align\(\)](#)

```
unsigned long L4virtio::Virtqueue::avail_align () [inline], [static]
```

Get the alignment in zero LSBs needed for the available ring.

#### Returns

The alignment in zero LSBs needed for an available ring.

Definition at line 287 of file [virtqueue](#).

#### 16.440.2.2 [avail\\_size\(\)](#)

```
unsigned long L4virtio::Virtqueue::avail_size (
 unsigned num) [inline], [static]
```

Calculate the size of the available ring for [num](#) entries.

#### Parameters

---

|            |                                              |
|------------|----------------------------------------------|
| <i>num</i> | The number of entries in the available ring. |
|------------|----------------------------------------------|

### Returns

The size in bytes needed for an available ring with [num](#) entries.

Definition at line 279 of file [virtqueue](#).

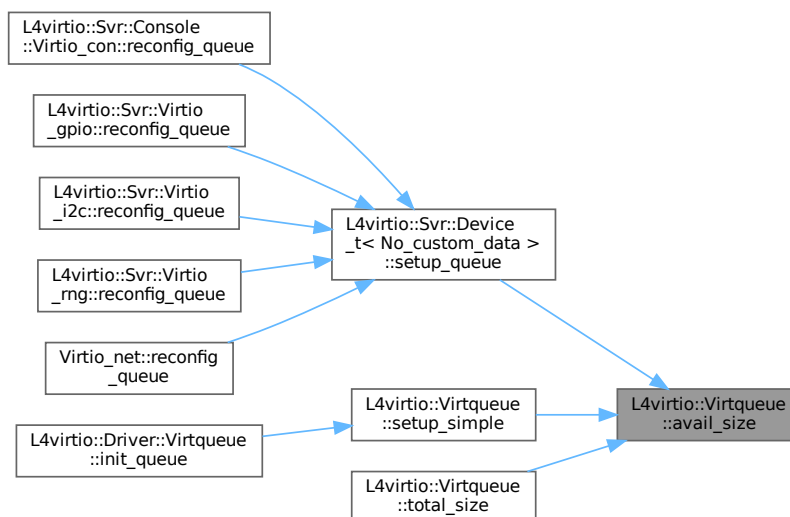

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< No\\_custom\\_data >::setup\\_queue\(\)](#), [setup\\_simple\(\)](#), and [total\\_size\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.440.2.3 desc\_align()**

```
unsigned long L4virtio::Virtqueue::desc_align () [inline], [static]
```

Get the alignment in zero LSBs needed for the descriptor table.

**Returns**

The alignment in zero LSBs needed for a descriptor table.

Definition at line 269 of file [virtqueue](#).

**16.440.2.4 desc\_size()**

```
unsigned long L4virtio::Virtqueue::desc_size (
 unsigned num) [inline], [static]
```

Calculate the size of the descriptor table for [num](#) entries.

**Parameters**

|            |                                                |
|------------|------------------------------------------------|
| <i>num</i> | The number of entries in the descriptor table. |
|------------|------------------------------------------------|

**Returns**

The size in bytes needed for a descriptor table with [num](#) entries.

Definition at line 261 of file [virtqueue](#).

References [num\(\)](#).

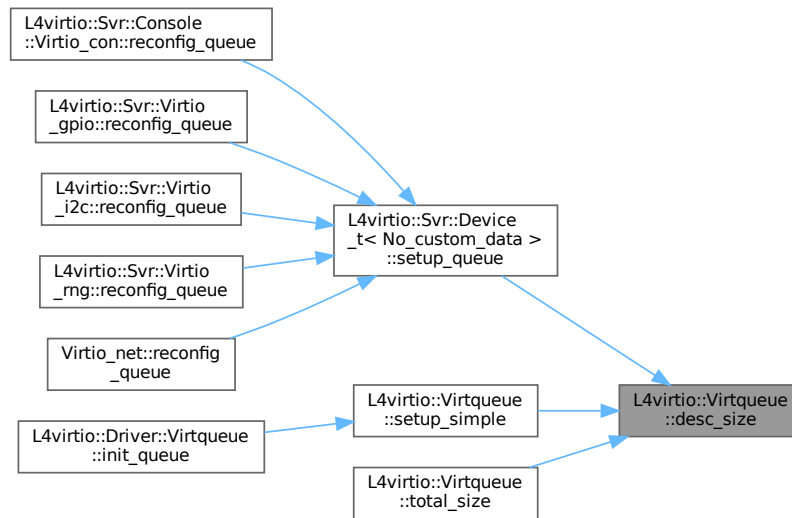

Referenced by [L4virtio::Svr::Device\\_t< No\\_custom\\_data >::setup\\_queue\(\)](#), [setup\\_simple\(\)](#), and [total\\_size\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

#### 16.440.2.5 disable()

```
void L4virtio::Virtqueue::disable () [inline]
```

Completely disable the queue.

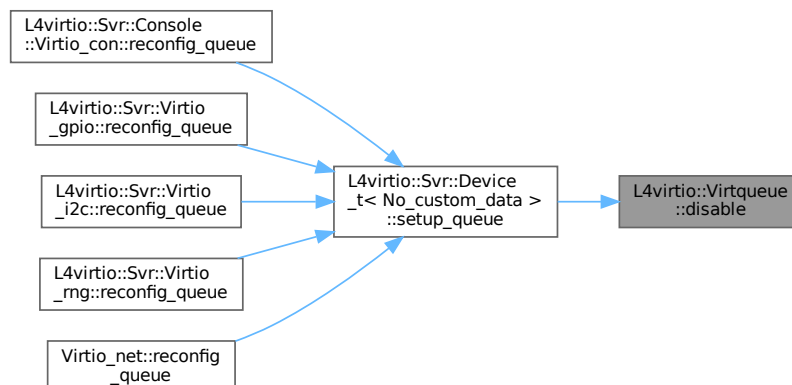

[setup\(\)](#) must be used to enable the queue again.

Definition at line 224 of file [virtqueue](#).

References [\\_desc](#).

Referenced by [L4virtio::Svr::Device\\_t< No\\_custom\\_data >::setup\\_queue\(\)](#).

Here is the caller graph for this function:

### 16.440.2.6 dump()

```
void L4virtio::Virtqueue::dump (
 Desc const * d) const [inline]
```

Dump descriptors for this queue.

#### Precondition

the queue must be in working state.

Definition at line 392 of file [virtqueue](#).

References [\\_desc](#), and [L4virtio::Virtqueue::Desc::dump\(\)](#).

Here is the call graph for this function:

### 16.440.2.7 get\_avail\_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_avail_idx () const [inline]
```

Get available index from available ring (for debugging).

#### Precondition

Queue must be in a working state.

#### Returns

current index in the available ring (shared between device model and device driver).

Definition at line 449 of file [virtqueue](#).

References [\\_avail](#).

### 16.440.2.8 get\_tail\_avail\_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_tail_avail_idx () const [inline]
```

Get tail-available index stored in local state (for debugging).

#### Returns

current tail index for the the available ring.

Definition at line 456 of file [virtqueue](#).

References [\\_current\\_avail](#).

### 16.440.2.9 no\_notify\_guest()

```
bool L4virtio::Virtqueue::no_notify_guest () const [inline]
```

Get the no IRQ flag of this queue.

#### Precondition

queue must be in working state.

#### Returns

true if the guest does not want to get IRQs (currently).

Definition at line 414 of file [virtqueue](#).

References [\\_avail](#).

Referenced by [L4virtio::Svr::Block\\_dev\\_base<Ds\\_data>::finalize\\_request\(\)](#), and [L4virtio::Svr::Console::Device::notify\\_queue\(\)](#).

Here is the caller graph for this function:

**16.440.2.10 no\_notify\_host()** [1/2]

```
bool L4virtio::Virtqueue::no_notify_host () const [inline]
```

Get the no notify flag of this queue.

**Precondition**

queue must be in working state.

**Returns**

true if the host does not want to get IRQs (currently).

Definition at line [426](#) of file [virtqueue](#).

References [\\_used](#).

**16.440.2.11 no\_notify\_host()** [2/2]

```
void L4virtio::Virtqueue::no_notify_host (
 bool value) [inline]
```

Set the no-notify flag for this queue.

**Precondition**

Queue must be in a working state.

Definition at line [436](#) of file [virtqueue](#).

References [\\_used](#).

**16.440.2.12 num()**

```
unsigned L4virtio::Virtqueue::num () const [inline]
```

## Returns

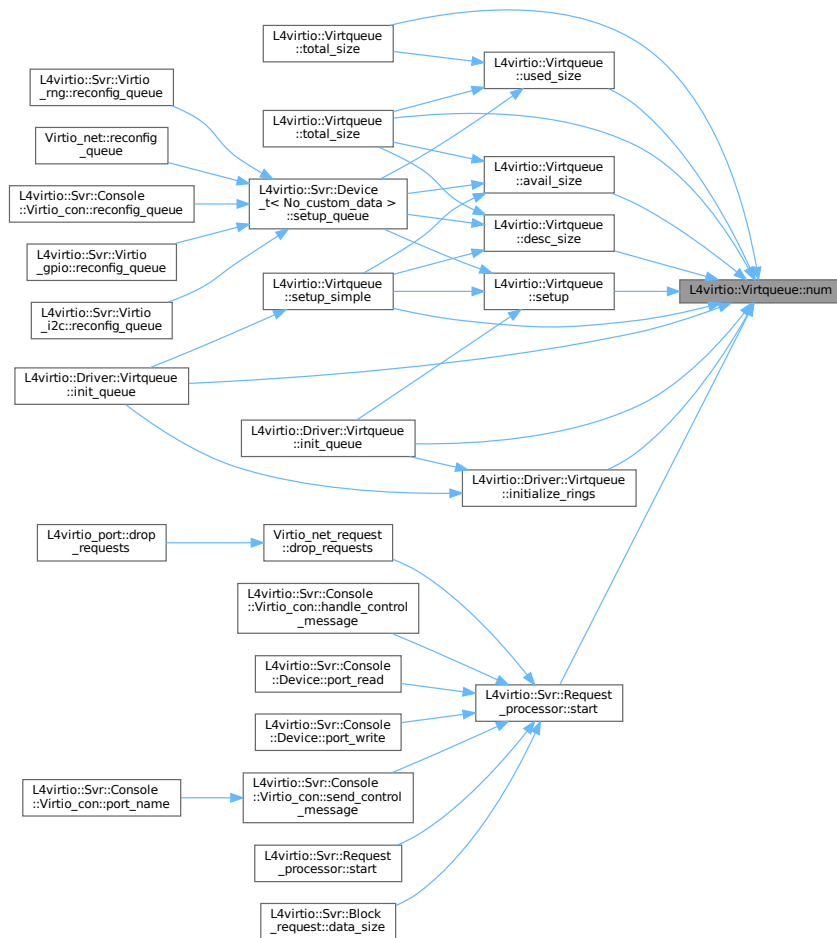

The number of entries in the ring.

Definition at line 404 of file [virtqueue](#).

References [\\_idx\\_mask](#).

Referenced by [avail\\_size\(\)](#), [desc\\_size\(\)](#), [L4virtio::Driver::Virtqueue::init\\_queue\(\)](#), [L4virtio::Driver::Virtqueue::init\\_queue\(\)](#), [L4virtio::Driver::Virtqueue::initialize\\_rings\(\)](#), [setup\(\)](#), [setup\\_simple\(\)](#), [L4virtio::Svr::Request\\_processor::start\(\)](#), [total\\_size\(\)](#), [total\\_size\(\)](#), and [used\\_size\(\)](#).

Here is the caller graph for this function:

## 16.440.2.13 ready()

```
bool L4virtio::Virtqueue::ready () const [inline]
```

Test if this queue is in working state.

**Returns**

true when the queue is in working state, false else.

Definition at line 400 of file [virtqueue](#).

References [\\_desc](#), and [L4\\_LIKELY](#).

Referenced by [L4virtio::Svr::Virtqueue::disable\\_notify\(\)](#), [Virtio\\_net\\_request::drop\\_requests\(\)](#), [L4virtio::Svr::Virtqueue::enable\\_notify\(\)](#), [Virtio\\_net\\_request::get\\_request\(\)](#), [L4virtio::Svr::Console::Virtio\\_con::handle\\_control\\_message\(\)](#), and [L4virtio::Svr::Console::Virtio\\_con::port\\_name\(\)](#).

Here is the caller graph for this function:

**16.440.2.14 setup()**

```

void L4virtio::Virtqueue::setup (
 unsigned num,
 void * desc,
 void * avail,
 void * used) [inline]

```

Enable this queue.

**Parameters**

|              |                                                                                                                                        |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <i>num</i>   | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).                           |
| <i>desc</i>  | The address of the descriptor table. (Must be <code>Desc_align</code> aligned and at least <code>desc_size(num)</code> bytes in size.) |
| <i>avail</i> | The address of the available ring. (Must be <code>Avail_align</code> aligned and at least <code>avail_size(num)</code> bytes in size.) |

|             |                                                                                                                                 |
|-------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>used</i> | The address of the used ring. (Must be <code>Used_align</code> aligned and at least <code>used_size(num)</code> bytes in size.) |
|-------------|---------------------------------------------------------------------------------------------------------------------------------|

Due to the data type of the descriptors, the queue can have a maximum size of  $2^{16}$ .

Definition at line 349 of file [virtqueue](#).

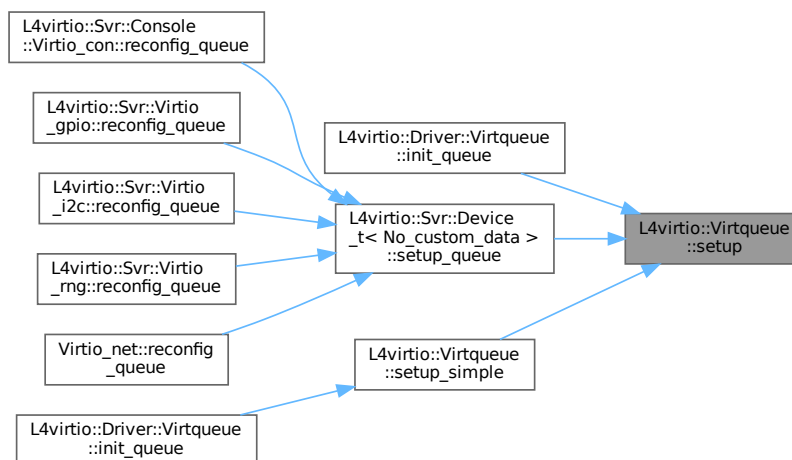

References [\\_avail](#), [\\_current\\_avail](#), [\\_desc](#), [\\_idx\\_mask](#), [\\_used](#), [L4\\_EINVAL](#), and [num\(\)](#).

Referenced by [L4virtio::Driver::Virtqueue::init\\_queue\(\)](#), [L4virtio::Svr::Device\\_t< No\\_custom\\_data >::setup\\_queue\(\)](#), and [setup\\_simple\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 16.440.2.15 setup\_simple()

```
void L4virtio::Virtqueue::setup_simple (
 unsigned num,
 void * ring) [inline]
```

Enable this queue.

#### Parameters

|             |                                                                                                                                                                                                                       |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>num</i>  | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).                                                                                                          |
| <i>ring</i> | The base address for the queue data structure. The memory block at <code>ring</code> must be at least <code>total_size(num)</code> bytes in size and have an alignment of <code>Desc_align(desc_align())</code> bits. |

Due to the data type of the descriptors, the queue can have a maximum size of  $2^{16}$ .

Definition at line 378 of file [virtqueue](#).

References [avail\\_size\(\)](#), [desc\\_size\(\)](#), [l4\\_round\\_size\(\)](#), [num\(\)](#), and [setup\(\)](#).

Referenced by [L4virtio::Driver::Virtqueue::init\\_queue\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

#### 16.440.2.16 total\_size() [1/2]

```
unsigned long L4virtio::Virtqueue::total_size () const [inline]
```

Calculate the total size of this virtqueue.

**Precondition**

The queue has been set up.

Definition at line 314 of file [virtqueue](#).

References [\\_desc](#), [\\_used](#), [num\(\)](#), and [used\\_size\(\)](#).

Here is the call graph for this function:

**16.440.2.17 total\_size() [2/2]**

```
unsigned long L4virtio::Virtqueue::total_size (
 unsigned num) [inline], [static]
```

Calculate the total size for a virtqueue of the given dimensions.

**Parameters**

|            |                                                                                                              |
|------------|--------------------------------------------------------------------------------------------------------------|
| <i>num</i> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
|------------|--------------------------------------------------------------------------------------------------------------|

**Returns**

The total size in bytes of the queue data structures.

Definition at line 245 of file [virtqueue](#).

References [avail\\_size\(\)](#), [desc\\_size\(\)](#), [l4\\_round\\_size\(\)](#), [num\(\)](#), and [used\\_size\(\)](#).

Here is the call graph for this function:

#### 16.440.2.18 `used_align()`

```
unsigned long L4virtio::Virtqueue::used_align () [inline], [static]
```

Get the alignment in zero LSBs needed for the used ring.

##### Returns

The alignment in zero LSBs needed for an used ring.

Definition at line 306 of file [virtqueue](#).

#### 16.440.2.19 `used_size()`

```
unsigned long L4virtio::Virtqueue::used_size (
 unsigned num) [inline], [static]
```

Calculate the size of the used ring for [num](#) entries.

##### Parameters

|            |                                         |
|------------|-----------------------------------------|
| <i>num</i> | The number of entries in the used ring. |
|------------|-----------------------------------------|

##### Returns

The size in bytes needed for an used ring with [num](#) entries.

Definition at line 298 of file [virtqueue](#).

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< No\\_custom\\_data >::setup\\_queue\(\)](#), [total\\_size\(\)](#), and [total\\_size\(\)](#).

### 16.444.1 Detailed Description

Type for descriptor flags.

Definition at line 92 of file [virtqueue](#).

### 16.444.2 Member Typedef Documentation

#### 16.444.2.1 indirect\_bfm\_t

```
typedef cxx::Bitfield<decltype(raw), 2, 2> L4virtio::Virtqueue::Desc::Flags::indirect_bfm_t
```

Indirect descriptor, block contains a list of descriptors.

Type to access the [indirect](#) bits (2 to 2) of [raw](#).

Definition at line 105 of file [virtqueue](#).

### 16.444.2.2 next\_bfm\_t

```
typedef cxx::Bitfield<decltype(raw), 0, 0> L4virtio::Virtqueue::Desc::Flags::next_bfm_t
```

Part of a descriptor chain which is continued with the next field.

Type to access the `next` bits (0 to 0) of `raw`.

Definition at line 101 of file `virtqueue`.

### 16.444.2.3 write\_bfm\_t

```
typedef cxx::Bitfield<decltype(raw), 1, 1> L4virtio::Virtqueue::Desc::Flags::write_bfm_t
```

Block described by this descriptor is writeable.

Type to access the `write` bits (1 to 1) of `raw`.

Definition at line 103 of file `virtqueue`.

The documentation for this struct was generated from the following file:

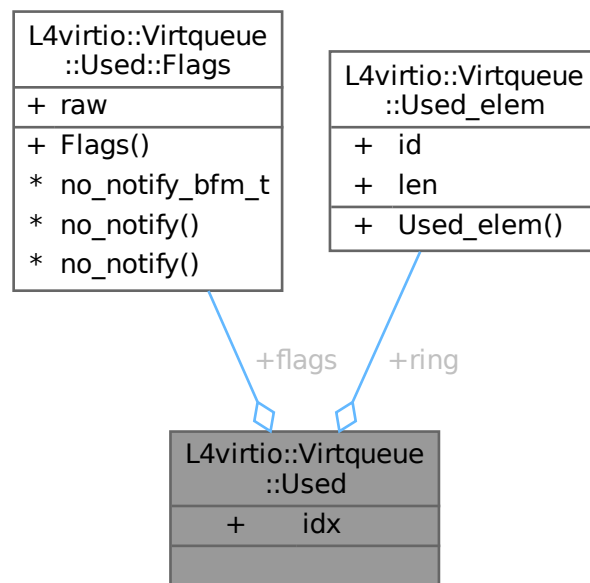

- `l4/l4virtio/virtqueue`

## 16.445 L4virtio::Virtqueue::Used Class Reference

`Used` ring.

```
#include <virtqueue>
```

Collaboration diagram for `L4virtio::Virtqueue::Used`:

## Data Structures

- struct [Flags](#)  
*flags for the used ring.*

## Data Fields

- [Flags](#) **flags**  
*flags of the used ring.*
- [l4\\_uint16\\_t](#) **idx**  
*index of the last entry in the ring.*
- [Used\\_elem](#) **ring** []  
*array of used descriptors.*

### 16.445.1 Detailed Description

[Used](#) ring.

Definition at line 173 of file [virtqueue](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/virtqueue

## 16.446 L4virtio::Virtqueue::Used::Flags Struct Reference

flags for the used ring.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Used::Flags:

*W: address of descriptor table.*
- [l4\\_uint64\\_t](#) **avail\_addr**  
*W: address of available ring.*
- [l4\\_uint64\\_t](#) **used\_addr**  
*W: address of used ring.*
- [l4\\_uint16\\_t](#) **device\_notify\_index**  
*R: Event index to be used by the driver (driver to device).*

### 16.452.1 Detailed Description

Queue configuration entry.

An array of such entries is available at the [l4virtio\\_config\\_hdr\\_t::queues\\_offset](#) in the config data space.

Consistency rules for the queue config are:

- A driver might read [num\\_max](#) at any time.
- A driver must write to [num](#), [desc\\_addr](#), [avail\\_addr](#), and [used\\_addr](#) only when [ready](#) is zero (0). Values in these fields are validated and used by the device only after successfully setting [ready](#) to one (1), either by the IPC or by L4VIRTIO\_CMD\_CFG\_QUEUE.
- The value of [device\\_notify\\_index](#) is valid only when [ready](#) is one.
- The driver might write to [device\\_notify\\_index](#) at any time, however the change is guaranteed to take effect after a successful L4VIRTIO\_CMD\_CFG\_QUEUE or after a config\_queue IPC. Note, the change might also have immediate effect, depending on the device implementation.

Definition at line [223](#) of file [virtio.h](#).

### 16.459.1 Detailed Description

A Port on the Virtio Net Switch.

A Port object gets created by `Virtio_factory::op_create()`. This function actually only instantiates objects of the types `Switch_port` and `Monitor_port`. The created Port registers itself at the switch's server. Usually, the IPC call for port creation comes from `ned`. To finalize the setup, the client has to initialize the port during the virtio initialization phase. To do this, the client registers a dataspace for queues and buffers and provides an IRQ to notify the client on incoming network requests.

Definition at line 36 of file [port\\_l4virtio.h](#).

### 16.459.2 Member Function Documentation

#### 16.459.2.1 drop\_requests()

```
void L4virtio_port::drop_requests () [inline]
```

Drop all requests pending in the transmission queue.

This is used for monitor ports, which are not allowed to send packets.

Definition at line 103 of file [port\\_l4virtio.h](#).

References [Virtio\\_net\\_request::drop\\_requests\(\)](#), and [Virtio\\_net::tx\\_q\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/port_l4virtio.h`

## 16.460 Mac\_addr Class Reference

A wrapper class around the value of a MAC address.

```
#include <mac_addr.h>
```

Collaboration diagram for Mac\_addr:

### Public Member Functions

- bool **is\_broadcast** () const  
*Check if MAC address is a broadcast or multicast address.*
- bool **is\_unknown** () const  
*Check if the MAC address is not yet known.*

### 16.460.1 Detailed Description

A wrapper class around the value of a MAC address.

Definition at line 19 of file [mac\\_addr.h](#).

The documentation for this class was generated from the following file:

- [pkg/virtio-net-switch/server/switch/mac\\_addr.h](#)

## 16.461 Mac\_table< Size > Class Template Reference

[Mac\\_table](#) manages a 1:n association between ports and MAC addresses.

```
#include <mac_table.h>
```

Collaboration diagram for Mac\_table< Size >:

### Public Member Functions

- Port\_iface \* [lookup](#) (Mac\_addr dst, l4\_uint16\_t vlan\_id) const  
*Find the destination port for a MAC address and VLAN id.*
- void [learn](#) (Mac\_addr src, Port\_iface \*port, l4\_uint16\_t vlan\_id)  
*Learn a MAC address (add it to the MAC table).*
- void [flush](#) (Port\_iface \*port)  
*Flush all associations with a given port.*

## 16.461.1 Detailed Description

```
template<std::size_t Size = 1024U>
class Mac_table< Size >
```

[Mac\\_table](#) manages a 1:n association between ports and MAC addresses.

There are different types of devices which might be attached to a port. For a normal device the switch sees exactly one MAC address per port - the MAC address of the device attached to it. But there might be other devices like software bridges attached to the port sending packets with different MAC addresses to the port. Therefore the switch has to manage a 1:n association between ports and MAC addresses. The MAC table manages this association.

When a packet comes in we need to find the destination port for the packet and therefore perform a lookup based on the MAC address.

To prevent unbounded growth of the lookup table, the number of entries is limited. Replacement is done on a round-robin basis. If the capacity was reached, the oldest entry is evicted.

Definition at line 40 of file [mac\\_table.h](#).

## 16.461.2 Member Function Documentation

### 16.461.2.1 flush()

```
template<std::size_t Size = 1024U>
void Mac_table< Size >::flush (
 Port_iface * port) [inline]
```

Flush all associations with a given port.

### Parameters

|             |                                       |
|-------------|---------------------------------------|
| <i>port</i> | Pointer to port that is to be flushed |
|-------------|---------------------------------------|

This function removes all references to a given port from the MAC table. Since we manage a 1:n association between ports and MAC addresses there might be more than one entry for a given port and we have to iterate over the whole array to delete every reference to the port.

Definition at line 129 of file [mac\\_table.h](#).

### 16.461.2.2 learn()

```
template<std::size_t Size = 1024U>
void Mac_table< Size >::learn (
 Mac_addr src,
 Port_iface * port,
 14_uint16_t vlan_id) [inline]
```

Learn a MAC address (add it to the MAC table).

#### Parameters

|                |                                                                      |
|----------------|----------------------------------------------------------------------|
| <i>src</i>     | MAC address                                                          |
| <i>port</i>    | Pointer to the port object that can be used to reach MAC address src |
| <i>vlan_id</i> | VLAN id of the packet destination.                                   |

Will evict the oldest learned address from the table if the maximum capacity was reached and if the MAC address was not known yet. The source port of the table entry is always updated to cope with clients that move between ports.

Definition at line 78 of file [mac\\_table.h](#).

References [L4\\_UNLIKELY](#), and [lookup\(\)](#).

Here is the call graph for this function:

### 16.461.2.3 lookup()

```
template<std::size_t Size = 1024U>
Port_iface * Mac_table< Size >::lookup (
 Mac_addr dst,
 14_uint16_t vlan_id) const [inline]
```

Find the destination port for a MAC address and VLAN id.

#### Parameters

|                           |             |
|---------------------------|-------------|
| <i>dst</i>                | MAC address |
| <i>vlan</i><br><i>_id</i> | VLAN id     |

### Return values

|                |                                    |
|----------------|------------------------------------|
| <i>nullptr</i> | The MAC address is not known (yet) |
| <i>other</i>   | Pointer to the destination port    |

Definition at line 58 of file [mac\\_table.h](#).

Referenced by [learn\(\)](#).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/mac_table.h`

## 16.462 Net\_transfer Class Reference

A network request to only a single destination.

```
#include <request.h>
```

Collaboration diagram for Net\_transfer:

### Public Member Functions

- void const \* **req\_id** () const  
*Identifier for the underlying Net\_request, used for logging purposes.*
- virtual void **copy\_header** (Virtio\_net::Hdr \*dst\_header) const =0  
*Populate the virtio-net header for the destination.*
- **Buffer** & **cur\_buf** ()  
*Buffer containing (a part of) the packet data.*
- virtual bool **done** ()=0  
*Check whether the transfer has been completed, i.e.*

### 16.462.1 Detailed Description

A network request to only a single destination.

A `Net_request` can have multiple destinations (being a broadcast request, for example). That is why it is processed by multiple `Net_transfers`, each representing the delivery to a single destination port.

`Port_iface::handle_request` uses the `Net_transfer` to move one packet to the destination of the request.

Definition at line 33 of file [request.h](#).

## 16.462.2 Member Function Documentation

### 16.462.2.1 `cur_buf()`

```
Buffer & Net_transfer::cur_buf () [inline]
```

`Buffer` containing (a part of) the packet data.

Once emptied, a call to `done ()` might replenish the buffer, in case the net request consisted of multiple chained buffers.

Definition at line 54 of file [request.h](#).

### 16.462.2.2 `done()`

```
virtual bool Net_transfer::done () [pure virtual]
```

Check whether the transfer has been completed, i.e.

the entire packet data has been copied.

#### Return values

|              |                                                         |
|--------------|---------------------------------------------------------|
| <i>false</i> | There is remaining packet data that needs to be copied. |
| <i>true</i>  | The entire packet data has been copied.                 |

#### Exceptions

|                                               |                                     |
|-----------------------------------------------|-------------------------------------|
| <a href="#">L4virtio::Svr::Bad_descriptor</a> | Exception raised in SRC port queue. |
|-----------------------------------------------|-------------------------------------|

## Data Structures

- struct [F](#)  
*Rm flags definitions.*
- class [Unique\\_region](#)  
*Unique region.*
- struct [Region](#)

*A region is a range of virtual addresses which is backed by content.*

- struct [Area](#)

*An area is a range of virtual addresses which is reserved, see [L4Re::Rm::reserve\\_area\(\)](#).*

## Public Types

- enum [Detach\\_result](#) { [Detached\\_ds](#) = 0 , [Kept\\_ds](#) = 1 , [Split\\_ds](#) = 2 , [Detach\\_result\\_mask](#) = 3 , [Detach\\_again](#) = 4 }
- Result values for detach operation.*
- enum [Region\\_flag\\_shifts](#) { [Caching\\_shift](#) = Dataspace::F::Caching\_shift }
- Region flag shifts.*
- enum [Detach\\_flags](#) { [Detach\\_exact](#) = 1 , [Detach\\_overlap](#) = 2 , [Detach\\_keep](#) = 4 }
- Flags for detach operation.*

## Public Member Functions

- long [reserve\\_area](#) ([l4\\_addr\\_t](#) \*start, unsigned long size, Flags flags=[Flags\(0\)](#), unsigned char align=[L4\\_PAGESHIFT](#)) const noexcept
- Reserve the given area in the region map.*
- template<typename T>  
long [reserve\\_area](#) (T \*\*start, unsigned long size, Flags flags=[Flags\(0\)](#), unsigned char align=[L4\\_PAGESHIFT](#)) const noexcept
- Reserve the given area in the region map.*
- long [free\\_area](#) ([l4\\_addr\\_t](#) addr)
- Free an area from the region map.*
- long [attach](#) ([l4\\_addr\\_t](#) \*start, unsigned long size, Flags flags, [L4::lpc::Cap](#)< Dataspace > mem, Offset offs=0, unsigned char align=[L4\\_PAGESHIFT](#), [L4::Cap](#)< [L4::Task](#) > const task=[L4::Cap](#)< [L4::Task](#) >::Invalid, char const \*name=nullptr, Offset backing\_offset=0) const noexcept
- Attach a data space to a region.*
- template<typename T>  
long [attach](#) (T \*\*start, unsigned long size, Flags flags, [L4::lpc::Cap](#)< Dataspace > mem, Offset offs=0, unsigned char align=[L4\\_PAGESHIFT](#), [L4::Cap](#)< [L4::Task](#) > const task=[L4::Cap](#)< [L4::Task](#) >::Invalid, char const \*name=nullptr, Offset backing\_offset=0) const noexcept
- Attach a data space to a region.*
- int [detach](#) ([l4\\_addr\\_t](#) addr, [L4::Cap](#)< Dataspace > \*mem, [L4::Cap](#)< [L4::Task](#) > const &task=This\_task) const noexcept
- Detach and unmap a region from the address space.*
- int [detach](#) (void \*addr, [L4::Cap](#)< Dataspace > \*mem, [L4::Cap](#)< [L4::Task](#) > const &task=This\_task) const noexcept
- Detach and unmap a region from the address space.*
- int [detach](#) ([l4\\_addr\\_t](#) start, unsigned long size, [L4::Cap](#)< Dataspace > \*mem, [L4::Cap](#)< [L4::Task](#) > const &task) const noexcept
- Detach and unmap all parts of the regions within the specified interval.*
- long [find](#) ([l4\\_addr\\_t](#) \*addr, unsigned long \*size, Offset \*offset, [L4Re::Rm::Flags](#) \*flags, [L4::Cap](#)< Dataspace > \*m) noexcept
- Find a region given an address and size.*
- long [get\\_regions](#) ([l4\\_addr\\_t](#) start, [L4::lpc::Ret\\_array](#)< [Region](#) > regions)
- Return the list of regions whose starting addresses are higher or equal to start in the address space managed by this region map.*
- long [get\\_areas](#) ([l4\\_addr\\_t](#) start, [L4::lpc::Ret\\_array](#)< [Area](#) > areas)
- Return the list of areas whose starting addresses are higher or equal to start in the address space managed by this region map.*
- long [get\\_info](#) ([l4\\_addr\\_t](#) addr, [L4::lpc::String](#)< char > &name, Offset &backing\_offset)
- Return auxiliary information of a region.*

## 16.463.3 Member Function Documentation

### 16.463.3.1 attach() [1/2]

```
long L4Re::Rm::attach (
 l4_addr_t * start,
 unsigned long size,
 Rm::Flags flags,
 L4::Ipc::Cap< Dataspace > mem,
 Rm::Offset offs = 0,
 unsigned char align = L4_PAGESHIFT,
 L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid,
 char const * name = nullptr,
 Rm::Offset backing_offset = 0) const [noexcept]
```

Attach a data space to a region.

#### Parameters

|         |              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in, out | <i>start</i> | Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If <a href="#">L4Re::Rm::F::Search_addr</a> is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If <a href="#">L4Re::Rm::F::In_area</a> is given the value is used as a selector for the area (see <a href="#">L4Re::Rm::reserve_area</a> ) to attach the data space to. |
|         | <i>size</i>  | Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.                                                                                                                                                                                                                                                                                                                                                                                     |

|  |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <i>flags</i>          | The flags control how and with which rights the dataspace is attached to the region. See <a href="#">L4Re::Rm::F::Attach_flags</a> and <a href="#">L4Re::Rm::F::Region_flags</a> . The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the <a href="#">F::Eager_map</a> flag is set this function may also return <a href="#">L4Re::Dataspace::map</a> error codes if the mapping fails. |
|  | <i>mem</i>            | Data space.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|  | <i>offs</i>           | Offset into the data space to use.                                                                                                                                                                                                                                                                                                                                                                                                                        |
|  | <i>align</i>          | Alignment of the virtual region, log2-size, default: a page ( <a href="#">L4_PAGESHIFT</a> ). This is only meaningful if the <a href="#">L4Re::Rm::F::Search_addr</a> flag is used.                                                                                                                                                                                                                                                                       |
|  | <i>task</i>           | Optional destination task of mapping if <a href="#">F::Eager_map</a> flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.                                                                                                                                                                                                                              |
|  | <i>name</i>           | Optional name of the region.                                                                                                                                                                                                                                                                                                                                                                                                                              |
|  | <i>backing_offset</i> | Optional value describing an offset into the backing store of this region.                                                                                                                                                                                                                                                                                                                                                                                |

### Return values

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| 0                 | Success                                                            |
| -L4_ENOENT        | No area could be found (see <a href="#">L4Re::Rm::F::In_area</a> ) |
| -L4_EPERM         | Operation not allowed.                                             |
| -L4_EINVAL        |                                                                    |
| -L4_EADDRNOTAVAIL | The given address is not available.                                |
| <0                | IPC errors                                                         |

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

### Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see [L4Re::Rm::find](#)).

Definition at line 34 of file [rm\\_impl.h](#).

### 16.463.3.2 attach() [2/2]

```
template<typename T>
long L4Re::Rm::attach (
 T ** start,
 unsigned long size,
 Flags flags,
 L4::Ipc::Cap< Dataspace > mem,
 Offset offs = 0,
 unsigned char align = L4_PAGESHIFT,
 L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid,
```

```
char const * name = nullptr,
Offset backing_offset = 0) const [inline], [noexcept]
```

Attach a data space to a region.

#### Parameters

---

|                |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>in, out</i> | <i>start</i>          | Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If <a href="#">L4Re::Rm::F::Search_addr</a> is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If <a href="#">L4Re::Rm::F::In_area</a> is given the value is used as a selector for the area (see <a href="#">L4Re::Rm::reserve_area</a> ) to attach the data space to. |
|                | <i>size</i>           | Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.                                                                                                                                                                                                                                                                                                                                                                                     |
|                | <i>flags</i>          | The flags control how and with which rights the dataspace is attached to the region. See <a href="#">L4Re::Rm::F::Attach_flags</a> and <a href="#">L4Re::Rm::F::Region_flags</a> . The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the <a href="#">F::Eager_map</a> flag is set this function may also return <a href="#">L4Re::Dataspace::map</a> error codes if the mapping fails.                                     |
|                | <i>mem</i>            | Data space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                | <i>offs</i>           | Offset into the data space to use.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                | <i>align</i>          | Alignment of the virtual region, log2-size, default: a page ( <a href="#">L4_PAGESHIFT</a> ). This is only meaningful if the <a href="#">L4Re::Rm::F::Search_addr</a> flag is used.                                                                                                                                                                                                                                                                                                           |
|                | <i>task</i>           | Optional destination task of mapping if <a href="#">F::Eager_map</a> flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.                                                                                                                                                                                                                                                                  |
|                | <i>name</i>           | Optional name of the region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                | <i>backing_offset</i> | Optional value describing an offset into the backing store of this region.                                                                                                                                                                                                                                                                                                                                                                                                                    |

### Return values

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| 0                 | Success                                                            |
| -L4_ENOENT        | No area could be found (see <a href="#">L4Re::Rm::F::In_area</a> ) |
| -L4_EPERM         | Operation not allowed.                                             |
| -L4_EINVAL        |                                                                    |
| -L4_EADDRNOTAVAIL | The given address is not available.                                |
| <0                | IPC errors                                                         |

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

### Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see [L4Re::Rm::find](#)).

Definition at line 409 of file [rm](#).

### 16.463.3.3 detach() [1/3]

```
int L4Re::Rm::detach (
 l4_addr_t addr,
```

```

L4::Cap< Dataspace > * mem,
L4::Cap< L4::Task > const & task = This_task) const [inline], [noexcept]

```

Detach and unmap a region from the address space.

### Parameters

|     |             |                                                                                                                                                                    |
|-----|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | <i>addr</i> | Virtual address of region, any address within the region is valid.                                                                                                 |
| out | <i>mem</i>  | Dataspace that is affected. Give 0 if not interested.                                                                                                              |
|     | <i>task</i> | This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task. |

### Return values

|                                         |                  |
|-----------------------------------------|------------------|
| <a href="#">L4Re::Rm::Detach_result</a> | On success.      |
| <code>-L4_ENOENT</code>                 | No region found. |
| <code>&lt;0</code>                      | IPC errors       |

Frees a region in the virtual address space given by *addr* (address type). The corresponding part of the address space is now available again.

Definition at line 765 of file [rm](#).

#### 16.463.3.4 detach() [2/3]

```

int L4Re::Rm::detach (
 l4_addr_t start,
 unsigned long size,
 L4::Cap< Dataspace > * mem,
 L4::Cap< L4::Task > const & task) const [inline], [noexcept]

```

Detach and unmap all parts of the regions within the specified interval.

### Parameters

|     |              |                                                                                                                                                                    |
|-----|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | <i>start</i> | Start of area to detach, must be within region.                                                                                                                    |
|     | <i>size</i>  | Size of of area to detach (in bytes).                                                                                                                              |
| out | <i>mem</i>   | Dataspace that is affected. Give 0 if not interested.                                                                                                              |
|     | <i>task</i>  | This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task. |

### Return values

|                                         |                  |
|-----------------------------------------|------------------|
| <a href="#">L4Re::Rm::Detach_result</a> | On success.      |
| <code>-L4_ENOENT</code>                 | No region found. |
| <code>&lt;0</code>                      | IPC errors       |

Frees all regions within the interval given by start and size. If a region overlaps the start or the end of the interval this region is only detached partly. If the interval is within one region the original region is split up into two separate regions.

Definition at line 778 of file [rm](#).

### 16.463.3.5 detach() [3/3]

```
int L4Re::Rm::detach (
 void * addr,
 L4::Cap< Dataspace > * mem,
 L4::Cap< L4::Task > const & task = This_task) const [inline], [noexcept]
```

Detach and unmap a region from the address space.

#### Parameters

|     |             |                                                                                                                                                                    |
|-----|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | <i>addr</i> | Virtual address of region, any address within the region is valid.                                                                                                 |
| out | <i>mem</i>  | Dataspace that is affected. Give 0 if not interested.                                                                                                              |
|     | <i>task</i> | This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task. |

#### Return values

|                                         |                  |
|-----------------------------------------|------------------|
| <a href="#">L4Re::Rm::Detach_result</a> | On success.      |
| <a href="#">-L4_ENOENT</a>              | No region found. |
| <a href="#">&lt;0</a>                   | IPC errors       |

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 770 of file [rm](#).

### 16.463.3.6 find()

```
long L4Re::Rm::find (
 l4_addr_t * addr,
 unsigned long * size,
 Offset * offset,
 L4Re::Rm::Flags * flags,
 L4::Cap< Dataspace > * m) [inline], [noexcept]
```

Find a region given an address and size.

#### Parameters

|         |             |                                                                     |
|---------|-------------|---------------------------------------------------------------------|
| in, out | <i>addr</i> | Address to look for. Returns the start address of the found region. |
|---------|-------------|---------------------------------------------------------------------|

|         |               |                                                                                                       |
|---------|---------------|-------------------------------------------------------------------------------------------------------|
| in, out | <i>size</i>   | Size of the area to look for (in bytes). Returns the size of the found region (in bytes).             |
| out     | <i>offset</i> | Offset at the beginning of the region within the associated dataspace.                                |
| out     | <i>flags</i>  | <a href="#">Region flags</a> , see <a href="#">F::Region_flags</a> (and <a href="#">F::In_area</a> ). |
| out     | <i>m</i>      | Associated dataspace or paging service.                                                               |

### Return values

|            |                        |
|------------|------------------------|
| 0          | Success                |
| -L4_EPERM  | Operation not allowed. |
| -L4_ENOENT | No region found.       |
| <0         | IPC errors             |

This function returns the properties of the region that contains the area described by the `addr` and `size` parameter. If no such region is found but a reserved area, the area is returned and [F::In\\_area](#) is set in `flags`. Note, in the case of an area the `offset` and `m` return values are invalid.

### Note

The value of the `size` input parameter should be 1 to assure that a region can be determined unambiguously.

Definition at line [672](#) of file [rm](#).

### 16.463.3.7 free\_area()

```
long L4Re::Rm::free_area (
 l4_addr_t addr)
```

Free an area from the region map.

### Parameters

|             |                                     |
|-------------|-------------------------------------|
| <i>addr</i> | An address within the area to free. |
|-------------|-------------------------------------|

### Return values

|            |                |
|------------|----------------|
| 0          | Success        |
| -L4_ENOENT | No area found. |
| <0         | IPC errors     |

**Note**

The data spaces that are attached to that area are not detached by this operation.

**See also**

[reserve\\_area\(\)](#) for more information about areas.

**16.463.3.8 get\_areas()**

```
long L4Re::Rm::get_areas (
 l4_addr_t start,
 L4::Ipc::Ret_array< Area > areas)
```

Return the list of areas whose starting addresses are higher or equal to `start` in the address space managed by this region map.

**Parameters**

|     |              |                                                |
|-----|--------------|------------------------------------------------|
|     | <i>start</i> | Virtual address from where to start searching. |
| out | <i>areas</i> | List of areas found in this region map.        |

**Return values**

|          |                                                           |
|----------|-----------------------------------------------------------|
| $\geq 0$ | Number of returned areas in the <code>areas</code> array. |
| <0       | IPC errors                                                |

**Note**

The returned list of areas might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last area from the previous call.

**16.463.3.9 get\_info()**

```
long L4Re::Rm::get_info (
 l4_addr_t addr,
 L4::Ipc::String< char > & name,
 Offset & backing_offset)
```

Return auxiliary information of a region.

This is a debugging feature and might not be available.

**Parameters**

|     |                       |                                |
|-----|-----------------------|--------------------------------|
|     | <i>addr</i>           | Virtual address of the region. |
| out | <i>name</i>           | Name of the region.            |
| out | <i>backing_offset</i> | Backing offset information.    |

### Return values

|            |                         |
|------------|-------------------------|
| 0          | Success                 |
| -L4_ENOENT | Region not found.       |
| -L4_ENOSYS | Function not available. |
| <0         | IPC errors              |

#### 16.463.3.10 get\_regions()

```
long L4Re::Rm::get_regions (
 l4_addr_t start,
 L4::Ipc::Ret_array< Region > regions)
```

Return the list of regions whose starting addresses are higher or equal to *start* in the address space managed by this region map.

### Parameters

|     |                |                                                |
|-----|----------------|------------------------------------------------|
|     | <i>start</i>   | Virtual address from where to start searching. |
| out | <i>regions</i> | List of regions found in this region map.      |

### Return values

|     |                                                         |
|-----|---------------------------------------------------------|
| >=0 | Number of returned regions in the <i>regions</i> array. |
| <0  | IPC errors                                              |

### Note

The returned list of regions might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last region from the previous call.

#### 16.463.3.11 reserve\_area() [1/2]

```
long L4Re::Rm::reserve_area (
 l4_addr_t * start,
 unsigned long size,
 Flags flags = Flags(0),
 unsigned char align = L4_PAGESHIFT) const [inline], [noexcept]
```

Reserve the given area in the region map.

### Parameters

|                |              |                                                                                                                             |
|----------------|--------------|-----------------------------------------------------------------------------------------------------------------------------|
| <i>in, out</i> | <i>start</i> | The virtual start address of the area to reserve. Returns the start address of the area.                                    |
|                | <i>size</i>  | The size of the area to reserve (in bytes).                                                                                 |
|                | <i>flags</i> | Flags for the reserved area (see <a href="#">L4Re::Rm::F::Region_flags</a> and <a href="#">L4Re::Rm::F::Attach_flags</a> ). |
|                | <i>align</i> | Alignment of area if searched as bits (log2 value).                                                                         |

### Return values

|                   |                                    |
|-------------------|------------------------------------|
| 0                 | Success                            |
| -L4_EADDRNOTAVAIL | The given area cannot be reserved. |
| <0                | IPC errors                         |

This function reserves an area within the virtual address space managed by the region map. There are two kinds of areas available:

- Reserved areas (*flags* = [L4Re::Rm::F::Reserved](#)), where no data spaces can be attached
- Special purpose areas (*flags* = 0), where data spaces can be attached to the area via the [L4Re::Rm::F::In\\_area](#) flag and a start address within the area itself.

### Note

When searching for a free place in the virtual address space (with *flags* = [L4Re::Rm::F::Search\\_addr](#)), the space between *start* and the end of the virtual address space is searched.

Definition at line 280 of file [rm](#).

### 16.463.3.12 reserve\_area() [2/2]

```
template<typename T>
long L4Re::Rm::reserve_area (
 T ** start,
 unsigned long size,
 Flags flags = Flags(0),
 unsigned char align = L4_PAGESHIFT) const [inline], [noexcept]
```

Reserve the given area in the region map.

### Parameters

|                |              |                                                                                                         |
|----------------|--------------|---------------------------------------------------------------------------------------------------------|
| <i>in, out</i> | <i>start</i> | The virtual start address of the area to reserve. Returns the start address of the area.                |
|                | <i>size</i>  | The size of the area to reserve (in bytes).                                                             |
|                | <i>flags</i> | Flags for the reserved area (see <a href="#">F::Region_flags</a> and <a href="#">F::Attach_flags</a> ). |
|                | <i>align</i> | Alignment of area if searched as bits (log2 value).                                                     |

### Return values

|                   |                                    |
|-------------------|------------------------------------|
| 0                 | Success                            |
| -L4_EADDRNOTAVAIL | The given area cannot be reserved. |
| <0                | IPC errors                         |

#### 16.465.2.1 Attach\_flags

```
enum L4Re::Rm::F::Attach_flags : l4_uint32_t
```

Flags for attach operation.

#### Enumerator

|              |                                                   |
|--------------|---------------------------------------------------|
| Search_addr  | Search for a suitable address range.              |
| In_area      | Search only in area, or map into area.            |
| Eager_map    | Eagerly map the attached data space in.           |
| No_eager_map | Prevent eager mapping of the attached data space. |
| Attach_mask  | Mask of all attach flags.                         |

Definition at line 111 of file [rm](#).

### 16.465.2.2 Region\_flags

```
enum L4Re::Rm::F::Region_flags : l4_uint16_t
```

[Region](#) flags (permissions, cacheability, special).

#### Enumerator

|                   |                                                                                                           |
|-------------------|-----------------------------------------------------------------------------------------------------------|
| Rights_mask       | <a href="#">Region</a> rights.                                                                            |
| R                 | Readable region.                                                                                          |
| W                 | Writable region.                                                                                          |
| X                 | Executable region.                                                                                        |
| RW                | Readable and writable region.                                                                             |
| RX                | Readable and executable region.                                                                           |
| RWX               | Readable, writable and executable region.                                                                 |
| Kernel            | Kernel-provided memory (KUMEM).                                                                           |
| Detach_free       | Free the portion of the data space after detach.                                                          |
| Pager             | <a href="#">Region</a> has a pager.                                                                       |
| Reserved          | <a href="#">Region</a> is reserved (blocked).                                                             |
| Caching_mask      | Mask of all <a href="#">Rm</a> cache bits.                                                                |
| Cache_normal      | Cache bits for normal cacheable memory. This is the default if no other cache-related flag was specified. |
| Cache_buffered    | Cache bits for buffered (write combining) memory.                                                         |
| Cache_uncached    | Cache bits for uncached memory.                                                                           |
| Ds_map_mask       | Mask for all bits for cache options and rights.                                                           |
| Region_flags_mask | Mask of all region flags.                                                                                 |

### 16.467.1 Detailed Description

```
template<typename T>
class Rm::Unique_region< T >
```

Unique region.

Capture a single region with automatic detach on destruction and unique ownership. Stores the start address and the region-mapper capability internally. A unique region is valid precisely if the internal region-mapper capability is valid. The features for unique ownership and automatic detach are only active for valid unique regions.

Definition at line 435 of file [rm](#).

### 16.467.2 Constructor & Destructor Documentation

#### 16.467.2.1 Unique\_region() [1/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
 T addr) [inline], [explicit], [noexcept]
```

Construct a [Unique\\_region](#) from an address.

No region manager is set.

#### Parameters

|             |                 |
|-------------|-----------------|
| <i>addr</i> | The new address |
|-------------|-----------------|

Definition at line 456 of file [rm](#).

#### 16.467.2.2 Unique\_region() [2/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
 T addr,
 L4::Cap< Rm > const & rm) [inline], [noexcept]
```

Construct a valid [Unique\\_region](#) from an address and a region manager.

#### Parameters

|             |                    |
|-------------|--------------------|
| <i>addr</i> | The address        |
| <i>rm</i>   | The region manager |

Definition at line 465 of file [rm](#).

### 16.467.2.3 Unique\_region() [3/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
 Unique_region< T > && o) [inline], [noexcept]
```

Move-Construct a [Unique\\_region](#).

#### Parameters

|          |                                    |
|----------|------------------------------------|
| <i>o</i> | L-value reference to other region. |
|----------|------------------------------------|

Definition at line 473 of file [rm](#).

### 16.467.2.4 ~Unique\_region()

```
template<typename T>
L4Re::Rm::Unique_region< T >::~~Unique_region () [inline], [noexcept]
```

Destructor.

If the region is valid, call [detach](#).

Definition at line 498 of file [rm](#).

## 16.467.3 Member Function Documentation

### 16.467.3.1 get()

```
template<typename T>
T L4Re::Rm::Unique_region< T >::get () const [inline], [noexcept]
```

Return the address.

#### Returns

the address

Definition at line 509 of file [rm](#).

**16.467.3.2 is\_valid()**

```
template<typename T>
bool L4Re::Rm::Unique_region< T >::is_valid () const [inline], [noexcept]
```

Check if the `Unique_region` is valid.

**Returns**

true iff the `Unique_region` is valid

Definition at line 549 of file `rm`.

**16.467.3.3 operator=()**

```
template<typename T>
Unique_region & L4Re::Rm::Unique_region< T >::operator= (
 Unique_region< T > && o) [inline], [noexcept]
```

Move-assign a `Unique_region`.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| <i>o</i> | L-value reference to region to assign from |
|----------|--------------------------------------------|

Definition at line 481 of file `rm`.

**16.467.3.4 release()**

```
template<typename T>
T L4Re::Rm::Unique_region< T >::release () [inline], [noexcept]
```

Return the address and invalidate the `Unique_region`.

**Returns**

the address

Definition at line 517 of file `rm`.

**16.467.3.5 reset()**

```
template<typename T>
void L4Re::Rm::Unique_region< T >::reset (
 T addr,
 L4::Cap< Rm > const & rm) [inline], [noexcept]
```

Set new address and region manager.

**Parameters**

|             |                        |
|-------------|------------------------|
| <i>addr</i> | The new address        |
| <i>rm</i>   | The new region manager |

Definition at line 529 of file [rm](#).

*Type for server-side receive buffer demand.*

### 16.468.1 Detailed Description

The IPC interface for creating ports.

The Switch factory provides an IPC interface to create ports. Ports are the only option for a client to communicate with the switch and, thus, with other network devices.

The `Switch_factory` gets constructed when the net switch application gets started. It thereafter gets registered on the switch's server to serve IPC `create` calls.

Definition at line 114 of file `main.cc`.

## 16.468.2 Member Function Documentation

### 16.468.2.1 op\_create()

```
long Switch_factory::op_create (
 L4::Factory::Rights ,
 L4::Ipc::Cap< void > & res,
 l4_umword_t type,
 L4::Ipc::Varg_list_ref va) [inline]
```

Handle factory protocol.

This function is invoked after an incoming factory::create request and creates a new port or statistics interface if possible.

Definition at line 528 of file [main.cc](#).

References [L4\\_EINVAL](#).

The documentation for this class was generated from the following file:

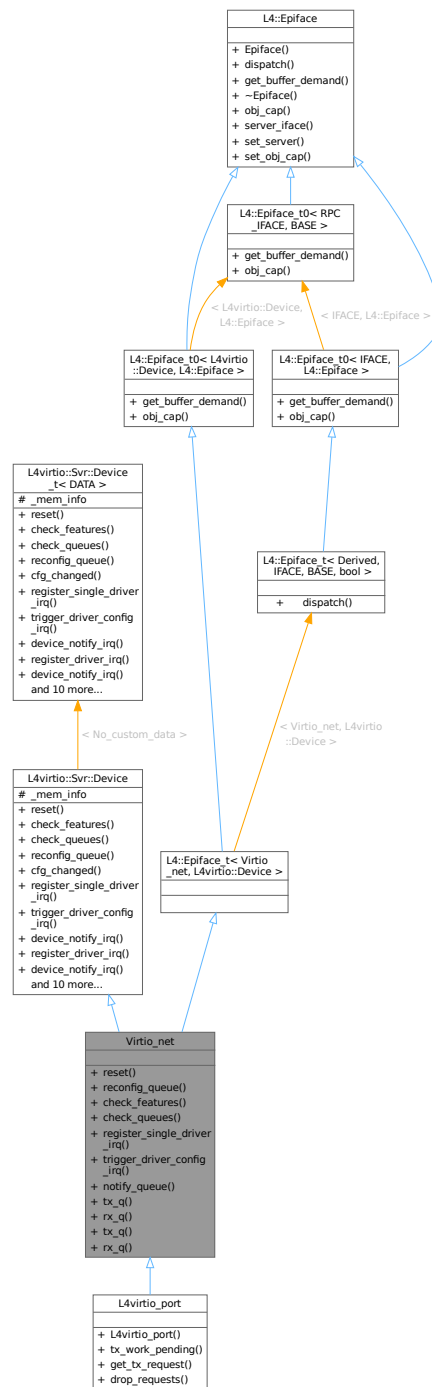

- pkg/virtio-net-switch/server/switch/main.cc

## 16.469 Virtio\_net Class Reference

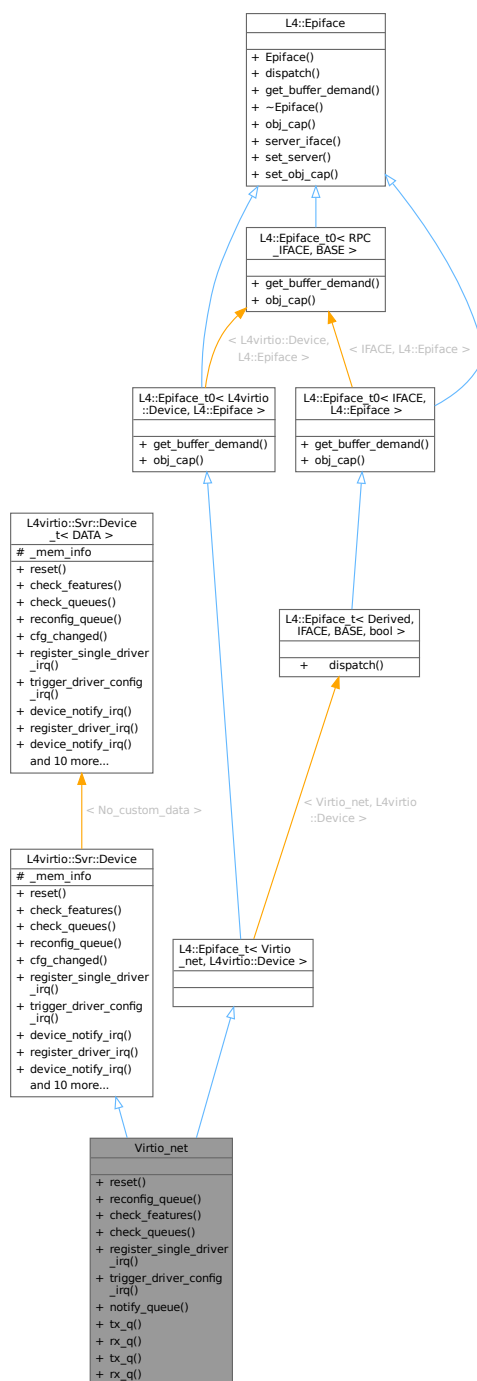

The Base class of a Port.

### 16.469.1 Detailed Description

The Base class of a Port.

This class provides the Virtio network protocol specific implementation aspects of a port.

[Virtio\\_net](#) comprises the virtqueues for both, the incoming and the outgoing network requests:

- The transmission queue, containing requests to be transmitted to other ports. The transmission queue is filled by the client, this port relates to.
- The receive queue, containing requests that have been transmitted from other ports. The receive queue is filled by the switch.

Definition at line 71 of file [virtio\\_net.h](#).

### 16.469.2 Member Function Documentation

#### 16.469.2.1 notify\_queue()

```
void Virtio_net::notify_queue (
 L4virtio::Svr::Virtqueue * queue) [inline]
```

Trigger the `_kick_guest_irq` IRQ.

This function gets called on the receiving port, when a request was successfully transmitted by the switch.

Definition at line 269 of file [virtio\\_net.h](#).

References [L4VIRTIO\\_IRQ\\_STATUS\\_VRING](#).

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/virtio_net.h`

## 16.470 Virtio\_net\_request Class Reference

Abstraction for a network request.

```
#include <request_l4virtio.h>
```

Collaboration diagram for `Virtio_net_request`:

| Virtio_net_request                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>+ <code>dst_mac()</code></li> <li>+ <code>src_mac()</code></li> <li>+ <code>drop_requests()</code></li> <li>+ <code>get_request()</code></li> </ul> |

## Public Member Functions

- [Mac\\_addr dst\\_mac](#) () const  
*Get the Mac address of the destination port.*
- [Mac\\_addr src\\_mac](#) () const  
*Get the Mac address of the source port.*

## Static Public Member Functions

- static void [drop\\_requests](#) ([Virtio\\_net](#) \*dev, [L4virtio::Svr::Virtqueue](#) \*queue)  
*Drop all requests of a specific queue.*
- static std::optional< [Virtio\\_net\\_request](#) > [get\\_request](#) ([Virtio\\_net](#) \*dev, [L4virtio::Svr::Virtqueue](#) \*queue)  
*Construct a request from the next entry of a provided queue.*

## 16.470.1 Detailed Description

Abstraction for a network request.

A [Virtio\\_net\\_request](#) is constructed by the source port, using the static function [get\\_request](#) () as part of [Port\\_iface::get\\_tx\\_request](#) ().

On destruction, [finish](#) () will be called, which, will trigger the client IRQ of the source client.

Definition at line 35 of file [request\\_l4virtio.h](#).

## 16.470.2 Member Function Documentation

### 16.470.2.1 drop\_requests()

```
void Virtio_net_request::drop_requests (
 Virtio_net * dev,
 L4virtio::Svr::Virtqueue * queue) [inline], [static]
```

Drop all requests of a specific queue.

This function is used for example to drop all requests in the transmission queue of a monitor port, since monitor ports are not allowed to transmit data.

### Parameters

|              |                                    |
|--------------|------------------------------------|
| <i>dev</i>   | Port of the provided virtqueue.    |
| <i>queue</i> | Virtqueue to drop all requests of. |

Definition at line 172 of file [request\\_l4virtio.h](#).

References [L4virtio::Svr::Virtqueue::desc\\_avail](#)(), [L4virtio::Svr::Virtqueue::finish](#)(), [L4\\_UNLIKELY](#), [L4virtio::Svr::Virtqueue::next\\_avail](#)(), [L4virtio::Virtqueue::ready](#)(), and [L4virtio::Svr::Request\\_processor::start](#)().

Referenced by [L4virtio\\_port::drop\\_requests](#)().

Here is the call graph for this function:

Here is the caller graph for this function:

### 16.470.2.2 get\_request()

```

std::optional< Virtio_net_request > Virtio_net_request::get_request (
 Virtio_net * dev,
 L4virtio::Svr::Virtqueue * queue) [inline], [static]

```

Construct a request from the next entry of a provided queue.

#### Parameters

|              |                                       |
|--------------|---------------------------------------|
| <i>dev</i>   | Port of the provided virtqueue.       |
| <i>queue</i> | Virtqueue to extract next entry from. |

Definition at line 199 of file [request\\_l4virtio.h](#).

References [L4\\_UNLIKELY](#), [L4virtio::Svr::Virtqueue::next\\_avail\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Referenced by [L4virtio\\_port::get\\_tx\\_request\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

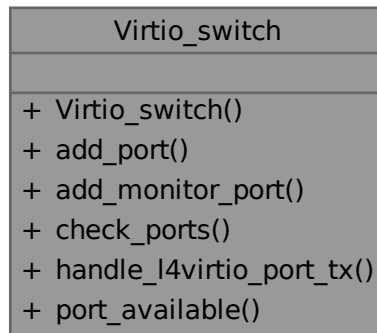

- `pkg/virtio-net-switch/server/switch/request_l4virtio.h`

## 16.471 Virtio\_switch Class Reference

The Virtio switch contains all ports and processes network requests.

```
#include <switch.h>
```

Collaboration diagram for Virtio\_switch:

### Public Member Functions

- [Virtio\\_switch](#) (unsigned max\_ports)  
*Create a switch with n ports.*
- bool [add\\_port](#) (Port\_iface \*port)  
*Add a port to the switch.*
- bool [add\\_monitor\\_port](#) (Port\_iface \*port)  
*Add a monitor port to the switch.*
- void [check\\_ports](#) ()  
*Check validity of ports.*
- bool [handle\\_l4virtio\\_port\\_tx](#) (L4virtio\_port \*port)  
*Handle TX queue of the given port.*
- int [port\\_available](#) (bool monitor)  
*Is there still a free port on this switch available?*

## 16.471.1 Detailed Description

The Virtio switch contains all ports and processes network requests.

A Port on its own is not capable to process an incoming network request because it has no knowledge about other ports. The processing of an incoming request therefore gets delegated to the switch.

The [Virtio\\_switch](#) is constructed at the start of the Virtio Net Switch application. The factory saves a reference to it to pass it to the [Kick\\_irq](#) on port creation.

Definition at line 33 of file [switch.h](#).

## 16.471.2 Constructor & Destructor Documentation

### 16.471.2.1 Virtio\_switch()

```
Virtio_switch::Virtio_switch (
 unsigned max_ports) [explicit]
```

Create a switch with n ports.

### Parameters

|                  |                                  |
|------------------|----------------------------------|
| <i>max_ports</i> | maximal number of provided ports |
|------------------|----------------------------------|

Definition at line 12 of file [switch.cc](#).

## 16.471.3 Member Function Documentation

### 16.471.3.1 add\_monitor\_port()

```
bool Virtio_switch::add_monitor_port (
 Port_iface * port)
```

Add a monitor port to the switch.

#### Parameters

|             |                                                        |
|-------------|--------------------------------------------------------|
| <i>port</i> | A pointer to an already constructed Port_iface object. |
|-------------|--------------------------------------------------------|

#### Return values

|              |                                      |
|--------------|--------------------------------------|
| <i>true</i>  | Port was added successfully.         |
| <i>false</i> | Switch was not able to add the port. |

Definition at line 54 of file [switch.cc](#).

### 16.471.3.2 add\_port()

```
bool Virtio_switch::add_port (
 Port_iface * port)
```

Add a port to the switch.

#### Parameters

|             |                                                        |
|-------------|--------------------------------------------------------|
| <i>port</i> | A pointer to an already constructed Port_iface object. |
|-------------|--------------------------------------------------------|

#### Return values

|              |                                      |
|--------------|--------------------------------------|
| <i>true</i>  | Port was added successfully.         |
| <i>false</i> | Switch was not able to add the port. |

Definition at line 29 of file [switch.cc](#).

References [Mac\\_addr::is\\_unknown\(\)](#).

Here is the call graph for this function:

### 16.471.3.3 check\_ports()

```
void Virtio_switch::check_ports ()
```

Check validity of ports.

Check whether all ports are still used and remove any unused (unreferenced) ports. Shall be invoked after an incoming cap deletion irq to remove ports without clients.

Definition at line 69 of file [switch.cc](#).

### 16.471.3.4 handle\_l4virtio\_port\_tx()

```
bool Virtio_switch::handle_l4virtio_port_tx (
 L4virtio_port * port)
```

Handle TX queue of the given port.

#### Parameters

|             |                                                              |
|-------------|--------------------------------------------------------------|
| <i>port</i> | <a href="#">L4virtio_port</a> to handle pending TX work for. |
|-------------|--------------------------------------------------------------|

#### Return values

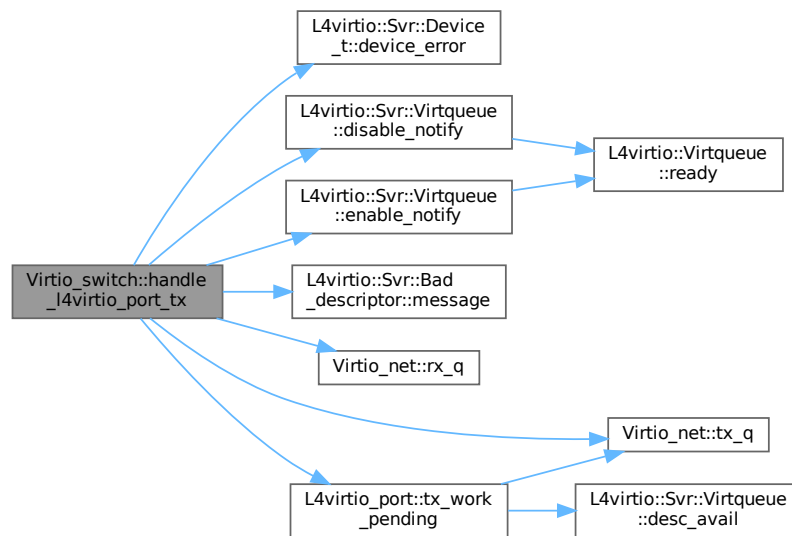

|              |                                                                                        |
|--------------|----------------------------------------------------------------------------------------|
| <i>false</i> | Port hit its TX burst limit, and thus a TX pending reschedule notification was queued. |
| <i>true</i>  | Port's entire TX queue was processed.                                                  |

Definition at line 194 of file [switch.cc](#).

References [L4virtio::Svr::Device\\_t< DATA >::device\\_error\(\)](#), [L4virtio::Svr::Virtqueue::disable\\_notify\(\)](#), [L4virtio::Svr::Virtqueue::enable\\_notify\(\)](#), [L4virtio::Svr::Bad\\_descriptor::message\(\)](#), [Virtio\\_net::rx\\_q\(\)](#), [Virtio\\_net::tx\\_q\(\)](#), and [L4virtio\\_port::tx\\_work\\_pending\(\)](#).

Here is the call graph for this function:

### 16.471.3.5 port\_available()

```
int Virtio_switch::port_available (
 bool monitor) [inline]
```

Is there still a free port on this switch available?

#### Parameters

|                |                                     |
|----------------|-------------------------------------|
| <i>monitor</i> | True if we look for a monitor slot. |
|----------------|-------------------------------------|

#### Return values

|          |                                |
|----------|--------------------------------|
| $\geq 0$ | The next available port index. |
| -1       | No port available.             |

Definition at line 148 of file [switch.h](#).

```
constexpr Virtio_vlan_mangle Virtio_vlan_mangle::add (
 14_uint16_t tci) [inline], [static], [constexpr]
```

Construct an object that adds a VLAN tag.

#### Parameters

|            |                                       |
|------------|---------------------------------------|
| <i>tci</i> | The TCI field of the VLAN tag to add. |
|------------|---------------------------------------|

It is the callers responsibility to ensure that the packet is not already tagged.

Definition at line 64 of file [vlan.h](#).

References [Virtio\\_vlan\\_mangle\(\)](#).

Here is the call graph for this function:

### 16.472.3.2 copy\_pkt()

```
l4_uint32_t Virtio_vlan_mangle::copy_pkt (
 Buffer & dst,
 Buffer & src) [inline]
```

Copy packet from *src* to *dst*.

#### Parameters

|            |                           |
|------------|---------------------------|
| <i>src</i> | Source packet buffer      |
| <i>dst</i> | Destination packet buffer |

#### Returns

The number of bytes copied

Copy the data from *src* to *dst*, possibly rewriting parts of the packet. The method is expected to be called repeatedly until the source packet is finished. Partial copies are allowed (including reading nothing from the source buffer) as long as progress is made, i.e. repeatedly calling this function eventually consumes the source buffer.

Definition at line 93 of file [vlan.h](#).

References [L4virtio::Svr::Data\\_buffer::copy\\_to\(\)](#), [L4\\_LIKELY](#), [L4virtio::Svr::Data\\_buffer::left](#), [L4virtio::Svr::Data\\_buffer::pos](#), and [L4virtio::Svr::Data\\_buffer::skip\(\)](#).

Here is the call graph for this function:

### 16.472.3.3 remove()

```
constexpr Virtio_vlan_mangle Virtio_vlan_mangle::remove () [inline], [static], [constexpr]
```

Construct an object that removes the VLAN tag.

This object assumes that the Ethernet packet has a VLAN tag and will slavishly remove the necessary bytes from the packet.

Definition at line 75 of file [vlan.h](#).

References [Virtio\\_vlan\\_mangle\(\)](#).

Here is the call graph for this function:

#### 16.472.3.4 `rewrite_hdr()`

```
void Virtio_vlan_mangle::rewrite_hdr (
 Virtio_net::Hdr * hdr) [inline]
```

Rewrite the virtio network header.

##### Parameters

|            |                                 |
|------------|---------------------------------|
| <i>hdr</i> | The virtio header of the packet |
|------------|---------------------------------|

This method is called exactly once for every virtio network packet. Any necessary changes to the header are done in-place.

Definition at line 142 of file [vlan.h](#).

References [L4\\_UNLIKELY](#).

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/vlan.h`

00002
00003 Tutorial lua script for Ned
00004 =====
00005
00006 Firstly we have a set of definitions available. Some come from 'ned.lua'
00007 embedded script and others from the C++ bindings within Ned. The whole L4
00008 functionality is in the lua module "L4" (use 'local L4 = require("L4");').
00009 The L4 module classes and functions cope with L4 capabilities and
00010 their invocations, provide a set of constants and access to the L4Re environment of
00011 the running program. Finally, of course it can also start L4 applications.
00012
00013 L4 Capabilities
00014 =====
00015
00016 The L4 module defines a user data type for capabilities. A capability in lua
00017 carries a typed L4 capability and is accompanied with a set of type specific
00018 methods that may be called on the object behind the capability. There also
00019 exists a way to cast a capability to a capability to a different type of
00020 object using L4.cast(type, cap).
00021
00022 L4.cast(type, cap)
00023
00024 Returns a cap transformed to a capability of the given type, whereas type
00025 is either the fully qualified C++ name of the class encapsulating the object
00026 or the L4 protocol ID assigned to all L4Re and L4 system objects.
00027 If the type is unknown then nil is returned.
00028
00029 Generic capabilities provide the following methods:
00030
00031 is_valid()
00032
00033 Returns true if the capability is not the invalid cap (L4_INVALID_CAP), and
00034 false if it is the invalid cap.
00035
00036
00037 L4Re::Namespace object
00038 =====
00039
00040 There is a lua type for name spaces that has the following methods:
00041
00042 query(name), or q(name)
00043
00044 Returns a closure (function) that initiates a query for the given name
00045 within the name space. The function takes no arguments and returns
00046 a capability if successful or nil if name is not found.
00047
00048
00049 link(name), or l(name)
00050
00051 Returns a function that can create a link to the given object in the name
00052 space if put into another name space. The function takes two parameters
00053 the target name space and the name in the target name space.
00054 Loader:create_namespace and Loader:fill_namespace calls this function
00055 when things are really put into an L4Re::Namespace.
00056
00057
00058 register(name, cap), or r(name, cap)
00059
00060 Registers the given object capability under the given name. cap can

```

```

00061 be either a real capability (note query returns a function), a string, or
00062 nil. If it is a capability it is just put into the name space.
00063 In the case cap is a string a placeholder will be put into the name space
00064 that will be replaced with a real capability later by some program.
00065 And if nil is use the name will be deleted from the name space.
00066
00067
00068 L4::Factory object
00069 =====
00070
00071 The factory object provides an interface to the generic create method of a
00072 factory.
00073
00074 create(proto, ...)
00075
00076 This method calls the factory to create an object of the given type,
00077 via the L4 protocol number (see L4.Proto table for more) all further
00078 arguments are passed to the factory.
00079
00080
00081 Access to the L4Re Env capabilities
00082 =====
00083
00084 The L4 module defines a table L4.Env that contains the capabilities
00085 of the L4Re::Env::env() environment. Namely:
00086
00087 factory The kernel factory of Ned
00088 log The log object of Ned
00089 user_factory The factory provided to Ned, including memory
00090 parent The parent of Ned
00091 rm The region map of Ned
00092 scheduler The scheduler of Ned
00093
00094
00095 Some useful constants
00096 =====
00097
00098 L4.Proto table contains the most important protocol values for
00099 L4 and L4Re objects.
00100
00101 Namespace
00102 Goos
00103 Rm
00104 Irq
00105 Sigma0
00106 Factory
00107 Log
00108 Scheduler
00109
00110 The L4.Info table contains the following functions:
00111
00112 Kip.str() The banner string found in the kernel info page
00113 arch() Architecture name, such as: x86, amd64, arm, ppc32
00114 platform() Platform name, such as: pc, ux, realview, beagleboard
00115 mword_bits() Number of native machine word bits (32, 64)
00116
00117
00118 Support for starting L4 programs
00119 =====
00120
00121 The L4 module defines two classes that are useful for starting L4 applications.
00122 The class L4.Loader that encapsulates a fairly high level policy
00123 that is useful for starting a whole set of processes. And the class L4.App_env
00124 that encapsulates a more fine-grained policy.
00125
00126 L4.Loader
00127 -----
00128
00129 The class L4.Loader encapsulates the policy for starting programs with the
00130 basic building blocks for the application coming from a dedicated loader,
00131 such as Moe or a Loader instance. These building blocks are a region map (Rm),
00132 a scheduler, a memory allocator, and a logging facility.
00133 A L4.Loader object is typically used to start multiple applications. There
00134 is a L4.default_loader instance of L4.Loader that uses the L4.Env.mem_alloc
00135 factory of the current Ned instance to create the objects for a new program.
00136 However you may also use a more restricted factory for applications and
00137 instantiate a loader for them. The L4.Loader objects can already be used
00138 to start a program with L4.Loader:start(app_spec, cmd, ...). Where app_spec
00139 is a table containing parameters for the new application. cmd is the
00140 command to run and the remaining arguments are the command-line options for
00141 the application.
00142
00143]==]
00144
00145 L4.default_loader:start({}, "rom/hello");
00146
00147 local _doc = [=[

```

```

00148
00149 This statement does the following:
00150 1. Create a new environment for the application
00151 2. Add the rom name-space into the new environment (thus shares Ned's
00152 'rom' directory with the new program).
00153 3. Creates all the building blocks for the new process and starts the
00154 'l4re' support kernel in the new process which in turn starts 'rom/hello'
00155 in the new process.
00156
00157 Using the app_spec parameter you can modify the behavior in two ways. There are
00158 two supported options 'caps' for providing more capabilities for the
00159 application. And 'log' for modifying the logger tag and color.
00160
00161]==]
00162
00163 local my_caps = {
00164 fb = L4.Env.vesa;
00165 };
00166
00167 L4.default_loader:start({caps = my_caps, log = {"APP", "blue"}}, "rom/hello");
00168
00169 local _doc = [=[
00170
00171 This snippet creates a caps template (my_caps) and uses it for the
00172 new process and also sets user-defined log tags. The L4.Loader:start method,
00173 however, automatically adds the 'rom' directory to the caps environment if
00174 not already specified in the template.
00175
00176 Environment variables may be given as a table in the third argument to
00177 start. Argument to the program are given space separated after the program
00178 name within a single string.
00179
00180]==]
00181
00182 L4.default_loader:start({}, "rom/program arg1 " .. arg2, { LD_DEBUG = 1 });
00183
00184 local _doc = [=[
00185
00186 L4.default_loader:startv is a variant of the start function that takes the
00187 arguments of the program as a single argument each. If the last argument to
00188 startv is a table it is interpreted as environment variables for the program.
00189 The above example would translate to:
00190
00191]==]
00192
00193 L4.default_loader:startv({}, "rom/program", "arg1", arg2, { LD_DEBUG = 1 });
00194
00195 local _doc = [=[
00196
00197 To create a new L4.Loader instance you may use a generic factory for all
00198 building blocks or set individual factories.
00199
00200]==]
00201
00202 l = L4.Loader.new({
00203 mem = L4.Env.user_factory:create(L4.Proto.Factory, 512*1024):m("rs")
00204 });
00205
00206 local _doc = [=[
00207
00208 Creates a loader instance that uses the newly created 512 KB factory for
00209 all building blocks. To set individual factories use the options:
00210 'mem' as memory allocator for the new processes and as
00211 default factory for all objects not explicitly set to a
00212 different factory
00213 'log_fab' for creating log objects.
00214 'ns_fab' for creating name-space objects.
00215 'rm_fab' for creating region-map objects.
00216
00217
00218
00219 L4.App_env
00220 -----
00221
00222 L4.App_env provides a more fine-grained control for a single process or for a
00223 limited number of processes. L4.App_env uses an L4.Loader object as basic
00224 facility. However you can override the memory allocator 'mem' for the new
00225 process as well as the kernel factory 'factory', the log capability etc.
00226
00227]==]
00228
00229 local e = L4.App_env.new({
00230 loader = l,
00231 mem = L4.Env.user_factory:create(L4.Proto.Factory, 128*1024):m("rs")
00232 });
00233
00234 e:start("rom/hello");

```

00194 * Header and csum offloading/general segmentation offloading
00195 *
00196 * We just copy the original header from source to
00197 * destination and have to consider three different
00198 * cases:
00199 * - no flags are set
00200 * - we got a packet that is completely checksummed
00201 * and correctly fragmented, there is nothing to
00202 * do other then copying.
00203 * - virtio_net_hdr_f_needs_csum set
00204 * - the packet is partially checksummed; if we would
00205 * send the packet out on the wire we would have
00206 * to calculate checksums now. But here we rely on
00207 * the ability of our guest to handle partially
00208 * checksummed packets and simply delegate the
00209 * checksum calculation to them.
00210 * - gso_type != gso_none
00211 * - the packet needs to be segmented; if we would
00212 * send it out on the wire we would have to
00213 * segment it now. But again we rely on the
00214 * ability of our guest to handle gso
00215 *
00216 * We currently assume that our guests negotiated
00217 * virtio_net_f_guest_*, this needs to be checked in
00218 * the future.
00219 *
00220 * We also discussed the usage of
00221 * virtio_net_hdr_f_data_valid to remove the need to
00222 * checksum packets at all. But since our clients send
00223 * partially checksummed packets anyway the only

```

```

00223 * interesting case would be a packet without
00224 * net_hdr_f_needs_checksum set. In that case we would
00225 * signal that we checked the checksum and the
00226 * checksum is actually correct. Since we do not know
00227 * the origin of the packet (it could have been send
00228 * by an external node and could have been routed to
00229 * u) we can not signal this without actually
00230 * verifying the checksum. Otherwise a packet with an
00231 * invalid checksum could be successfully delivered.

## 17.73 amd64/l4/util/rdtsc.h File Reference

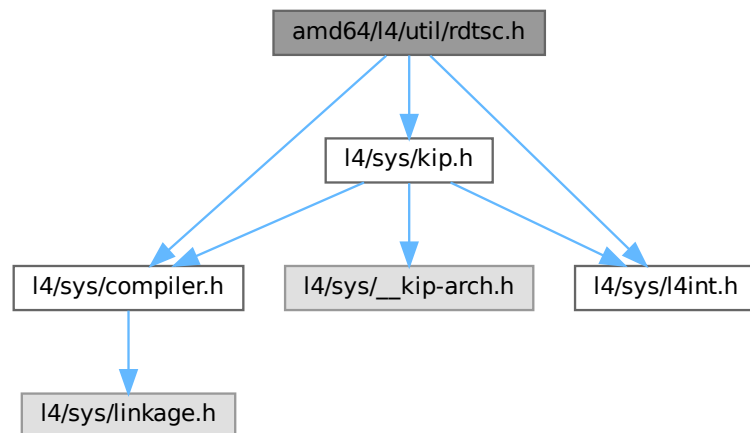

Timestamp counter related functions.

```

#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
#include <l4/sys/kip.h>

```

Include dependency graph for rdtsc.h:

### Functions

- `l4_cpu_time_t l4_rdtsc` (void)  
Read current value of CPU-internal timestamp counter.
- `l4_uint32_t l4_rdtsc_32` (void)  
Read the lest significant 32 bit of the TSC.
- `l4_uint64_t l4_rdpmc` (int ecx)  
Return current value of CPU-internal performance measurement counter.
- `l4_uint32_t l4_rdpmc_32` (int ecx)  
Return the least significant 32 bit of a performance counter.
- `l4_uint64_t l4_tsc_to_ns` (`l4_cpu_time_t` tsc)

- Convert timestamp to ns value.*
- [l4\\_uint64\\_t l4\\_tsc\\_to\\_us \(l4\\_cpu\\_time\\_t tsc\)](#)
- Convert timestamp into micro seconds value.*
- [void l4\\_tsc\\_to\\_s\\_and\\_ns \(l4\\_cpu\\_time\\_t tsc, l4\\_uint32\\_t \\*s, l4\\_uint32\\_t \\*ns\)](#)
- Convert timestamp to s.ns value.*
- [l4\\_cpu\\_time\\_t l4\\_ns\\_to\\_tsc \(l4\\_uint64\\_t ns\)](#)
- Convert nano seconds into CPU ticks.*
- [void l4\\_busy\\_wait\\_ns \(l4\\_uint64\\_t ns\)](#)
- Wait busy for a small amount of time.*
- [void l4\\_busy\\_wait\\_us \(l4\\_uint64\\_t us\)](#)
- Wait busy for a small amount of time.*
- [l4\\_uint32\\_t l4\\_calibrate\\_tsc \(l4\\_kernel\\_info\\_t const \\*kip\)](#)
- Determine scalers for timestamp calculations.*
- [l4\\_uint32\\_t l4\\_tsc\\_init \(l4\\_kernel\\_info\\_t const \\*kip\)](#)
- Initialize scaler for TSC calibrations from the kernel.*
- [l4\\_uint32\\_t l4\\_get\\_hz \(void\)](#)
- Get CPU frequency in Hz.*

### 17.73.1 Detailed Description

Timestamp counter related functions.

#include <l4/sys/kip.h>
Include dependency graph for rdtsc.h:
```

### Functions

- `l4_cpu_time_t l4_rdtsc` (void)  
*Read current value of CPU-internal timestamp counter.*
- `l4_uint32_t l4_rdtsc_32` (void)  
*Read the lest significant 32 bit of the TSC.*
- `l4_uint64_t l4_rdpmc` (int ecx)  
*Return current value of CPU-internal performance measurement counter.*
- `l4_uint32_t l4_rdpmc_32` (int ecx)  
*Return the least significant 32 bit of a performance counter.*
- `l4_uint64_t l4_tsc_to_ns` (`l4_cpu_time_t` tsc)  
*Convert timestamp to ns value.*
- `l4_uint64_t l4_tsc_to_us` (`l4_cpu_time_t` tsc)  
*Convert timestamp into micro seconds value.*
- `void l4_tsc_to_s_and_ns` (`l4_cpu_time_t` tsc, `l4_uint32_t` \*s, `l4_uint32_t` \*ns)  
*Convert timestamp to s.ns value.*
- `l4_cpu_time_t l4_ns_to_tsc` (`l4_uint64_t` ns)  
*Convert nano seconds into CPU ticks.*
- `void l4_busy_wait_ns` (`l4_uint64_t` ns)  
*Wait busy for a small amount of time.*
- `void l4_busy_wait_us` (`l4_uint64_t` us)  
*Wait busy for a small amount of time.*
- `l4_uint32_t l4_calibrate_tsc` (`l4_kernel_info_t` const \*kip)

*Determine scalers for timestamp calculations.*

- [l4\\_uint32\\_t l4\\_tsc\\_init](#) ([l4\\_kernel\\_info\\_t](#) const \*kip)

*Initialize scaler for TSC calibrations from the kernel.*

- [l4\\_uint32\\_t l4\\_get\\_hz](#) (void)

*Get CPU frequency in Hz.*

## 17.75.1 Detailed Description

Timestamp counter related functions.

## 17.81.1 Detailed Description

Segment handling (AMD64).

Definition in file [segment.h](#).

## 17.81.2 Enumeration Type Documentation

### 17.81.2.1 L4\_sys\_segment

```
enum L4_sys_segment
```

Constants for identifying segments.

#### Enumerator

|                     |                                      |
|---------------------|--------------------------------------|
| L4_AMD64_SEGMENT_FS | Constant identifying the FS segment. |
| L4_AMD64_SEGMENT_GS | Constant identifying the GS segment. |

Definition at line 106 of file [segment.h](#).

### 17.81.2.2 L4\_task\_ldt\_x86\_consts

```
enum L4_task_ldt_x86_consts
```

Constants for LDT handling.

#### Enumerator

|                             |                                                                  |
|-----------------------------|------------------------------------------------------------------|
| L4_TASK_LDT_X86_ENTRY_SIZE  | Size of an LDT entry.                                            |
| L4_TASK_LDT_X86_MAX_ENTRIES | Maximum number of LDT entries that can be written with one call. |

Definition at line 75 of file [segment.h](#).

## 17.81.3 Function Documentation

### 17.81.3.1 fiasco\_amd64\_segment\_info()

```
long fiasco_amd64_segment_info (
 l4_cap_idx_t thread,
 unsigned * user_ds,
 unsigned * user_cs,
 unsigned * user32_cs,
 l4_utcb_t * utcb) [inline]
```

Get segment information.

#### Parameters

---

|     |                  |                                                                                                            |
|-----|------------------|------------------------------------------------------------------------------------------------------------|
| in  | <i>thread</i>    | Thread to get info from.                                                                                   |
| out | <i>user_ds</i>   | DS segment selector.                                                                                       |
| out | <i>user_cs</i>   | 64-bit CS segment selector.                                                                                |
| out | <i>user32_cs</i> | 32-bit CS segment selector.                                                                                |
|     | <i>utcb</i>      | UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> . |

## Returns

System call error

Definition at line 175 of file [segment.h](#).

References [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), [L4\\_THREAD\\_AMD64\\_GET\\_SEGMENT\\_INFO\\_OP](#), and [l4\\_msg\\_regs\\_t::mr](#).

Here is the call graph for this function:

### 17.81.3.2 fiasco\_amd64\_set\_fs()

```

long fiasco_amd64_set_fs (
 l4_cap_idx_t thread,
 l4_umword_t base,
 l4_utcb_t * utcb) [inline]

```

Set the base address for the FS segment.

## Parameters

|               |                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------|
| <i>thread</i> | Thread for which the FS base address shall be modified.                                                    |
| <i>base</i>   | Base address.                                                                                              |
| <i>utcb</i>   | UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> . |

## Return values

|               |          |
|---------------|----------|
| <i>L4_EOK</i> | Success. |
|---------------|----------|

|                         |                                                            |
|-------------------------|------------------------------------------------------------|
| <code>-L4_EINVAL</code> | Invalid base address ( <i>base</i> ).                      |
| <code>-L4_ENOSYS</code> | Operation not supported with current kernel configuration. |

**Note**

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↵AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 24 of file [segment.h](#).

References [L4\\_AMD64\\_SEGMENT\\_FS](#), [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), and [L4\\_THREAD\\_AMD64\\_SET\\_SEGMENT\\_BASE\\_OP](#).

Here is the call graph for this function:

**17.81.3.3 fiasco\_amd64\_set\_segment\_base()**

```

long fiasco_amd64_set_segment_base (
 l4_cap_idx_t thread,
 enum L4_sys_segment segr,
 l4_umword_t base,
 l4_utcb_t * utcb) [inline]

```

Set the base address for a segment.

**Parameters**

|               |                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------|
| <i>thread</i> | Thread for which the base address of the selected segment shall be modified.                               |
| <i>segr</i>   | Segment to modify (one of <a href="#">L4_sys_segment</a> ).                                                |
| <i>base</i>   | Base address.                                                                                              |
| <i>utcb</i>   | UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> . |

**Return values**

|                     |          |
|---------------------|----------|
| <code>L4_EOK</code> | Success. |
|---------------------|----------|

|                         |                                                                              |
|-------------------------|------------------------------------------------------------------------------|
| <code>-L4_EINVAL</code> | Invalid segment ( <code>segr</code> ) or base address ( <code>base</code> ). |
| <code>-L4_ENOSYS</code> | Operation not supported with current kernel configuration.                   |

Definition at line 32 of file [segment.h](#).

References [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), and [L4\\_THREAD\\_AMD64\\_SET\\_SEGMENT\\_BASE](#).

Set GDT segment descriptors.

### 17.83.1 Detailed Description

l4f-specific fs/gs manipulation (AMD64).

Definition in file [segment.h](#).

### 17.83.2 Function Documentation

#### 17.83.2.1 fiasco\_amd64\_set\_fs()

```
long fiasco_amd64_set_fs (
 l4_cap_idx_t thread,
 l4_umword_t base,
 l4_utcb_t * utcb) [inline]
```

Set the base address for the FS segment.

#### Parameters

---

|               |                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------|
| <i>thread</i> | Thread for which the FS base address shall be modified.                                                    |
| <i>base</i>   | Base address.                                                                                              |
| <i>utcb</i>   | UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> . |

### Return values

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <i>L4_EOK</i>     | Success.                                                   |
| <i>-L4_EINVAL</i> | Invalid base address ( <i>base</i> ).                      |
| <i>-L4_ENOSYS</i> | Operation not supported with current kernel configuration. |

### Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↔AMD64_SEGMENT_FS, base, utcb)`.

### 17.83.2.2 fiasco\_amd64\_set\_segment\_base()

```

long fiasco_amd64_set_segment_base (
 l4_cap_idx_t thread,
 enum L4_sys_segment sgr,
 l4_umword_t base,
 l4_utcb_t * utcb) [inline]

```

Set the base address for a segment.

### Parameters

|               |                                                                              |
|---------------|------------------------------------------------------------------------------|
| <i>thread</i> | Thread for which the base address of the selected segment shall be modified. |
|---------------|------------------------------------------------------------------------------|

|             |                                                                                                            |
|-------------|------------------------------------------------------------------------------------------------------------|
| <i>segr</i> | Segment to modify (one of <a href="#">L4_sys_segment</a> ).                                                |
| <i>base</i> | Base address.                                                                                              |
| <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> . |

### Return values

|                   |                                                                  |
|-------------------|------------------------------------------------------------------|
| <i>L4_EOK</i>     | Success.                                                         |
| <i>-L4_EINVAL</i> | Invalid segment ( <i>segr</i> ) or base address ( <i>base</i> ). |
| <i>-L4_ENOSYS</i> | Operation not supported with current kernel configuration.       |

00020
00021 /*
00022 * Note: The following Assembler statement may produce wrong code:
00023 * asm volatile ("btsl %1, %2" : "=ccc"(r) : "Jr"(63), "m"(m) : "memory");
00024 *
00025 * The compiler might chose the first variant because the bit number is smaller
00026 * than 64. However, 'bts' is encoded as 32-bit variant ('btsl') and thus only
00027 * supports immediate bit values up to 31. Some assemblers support immediate
00028 * offsets > 31 by adapting the memory address accordingly but GAS does not.
00029 * With GAS, the instruction will encode an immediate value of 63 but the CPU
00030 * will set bit 31 instead of bit 63!
00031 *
00032 * Therefore, if we would use 'btsl' instead of 'btsq', the correct constraint
00033 * for the bit number parameter would be "Ir" instead of "Jr".

## 17.155.1 Function Documentation

### 17.155.1.1 l4io\_get\_root\_device()

```
l4io_device_handle_t l4io_get_root_device (
 void) [inline]
```

Get root device handle of the device bus.

#### Returns

root device handle

Definition at line 257 of file [io.h](#).

### 17.155.1.2 l4io\_iterate\_devices()

```
int l4io_iterate_devices (
 l4io_device_handle_t * devhandle,
 l4io_device_t * dev,
 l4io_resource_handle_t * reshandle)
```

Iterate over the device bus.

#### Parameters

|         |                  |                                                                               |
|---------|------------------|-------------------------------------------------------------------------------|
| in, out | <i>devhandle</i> | Device handle to start iterating at. The next device handle is returned here. |
| out     | <i>dev</i>       | Device information, may be NULL.                                              |
| out     | <i>reshandle</i> | Resource handle.                                                              |

#### Returns

0 on success, error code otherwise

References [L4\\_CV](#), and [L4\\_EXPORT](#).

### 17.155.1.3 l4io\_request\_all\_ioports()

```
void l4io_request_all_ioports (
 void(* res_cb)(l4vbus_resource_t const *res))
```

Request all available IO-port resources.

#### Parameters

|                     |                                                                                    |
|---------------------|------------------------------------------------------------------------------------|
| <code>res_cb</code> | Callback function called for every port resource found, give NULL for no callback. |
|---------------------|------------------------------------------------------------------------------------|

References [L4\\_CV](#), and [L4\\_EXPORT](#).

#### 17.155.1.4 l4io\_request\_icu()

```
l4_cap_idx_t l4io_request_icu (
 void)
```

Request the ICU object of the client.

##### Returns

Client ICU object, an invalid capability selector is returned if no ICU is available.

References [L4\\_CV](#), and [L4\\_EXPORT](#).

## 17.190.1 Detailed Description

IPC stream.

Definition in file [ipc\\_stream](#).

## 17.190.2 Function Documentation

### 17.190.2.1 `operator<<()` [1/4]

```
L4::Ipc::Ostream & operator<< (
 L4::Ipc::Ostream & s,
 bool v) [inline]
```

Insert an element to type `T` into the stream `s`.

#### Parameters

|                |                                                   |
|----------------|---------------------------------------------------|
| <code>s</code> | The stream to insert the element <code>v</code> . |
| <code>v</code> | The element to insert.                            |

#### Returns

The stream `s`.

Definition at line 1197 of file [ipc\\_stream](#).

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

### 17.190.2.2 `operator<<()` [2/4]

```
L4::Ipc::Ostream & operator<< (
 L4::Ipc::Ostream & s,
 char const * v) [inline]
```

Insert a zero terminated character string into the stream `s`.

#### Parameters

|          |                                            |
|----------|--------------------------------------------|
| <i>s</i> | The stream to insert the string <i>v</i> . |
| <i>v</i> | The string to insert.                      |

#### Returns

The stream *s*.

This operator produces basically the same content as the array insertion, however the length of the array is calculated using `strlen(v) + 1`. The string is copied into the message including the trailing zero.

Definition at line 1269 of file `ipc_stream`.

References `L4::Ipc::Ostream::put()`.

Here is the call graph for this function:

#### 17.190.2.3 operator<<() [3/4]

```

template<typename T>
L4::Ipc::Ostream & operator<< (
 L4::Ipc::Ostream & s,
 L4::Ipc::Internal::Buf_cp_out< T > const & v) [inline]

```

Insert an array with elements of type *T* into the stream *s*.

#### Parameters

|          |                                                            |
|----------|------------------------------------------------------------|
| <i>s</i> | The stream to insert the array <i>v</i> .                  |
| <i>v</i> | The array to insert (see <code>Ipc::Buf_cp_out()</code> ). |

**Returns**

The stream *s*.

Definition at line 1248 of file [ipc\\_stream](#).

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

**17.190.2.4 operator<<() [4/4]**

```
L4::Ipc::Ostream & operator<< (
 L4::Ipc::Ostream & s,
 l4_msgtag_t const & v) [inline]
```

Insert the [L4](#) message tag into the stream *s*.

**Parameters**

|          |                                               |
|----------|-----------------------------------------------|
| <i>s</i> | The stream to insert the tag <i>v</i> .       |
| <i>v</i> | The <a href="#">L4</a> message tag to insert. |

**Returns**

The stream *s*.

**Note**

Only one message tag can be inserted into a stream. Multiple insertions simply overwrite previous insertions.

Definition at line 1232 of file [ipc\\_stream](#).

Here is the call graph for this function:

**17.190.2.5 operator>>() [1/6]**

```
L4::Ipc::Istream & operator>> (
 L4::Ipc::Istream & s,
 bool & v) [inline]
```

Extract one element of type T from the stream s.

**Parameters**

|     |   |                             |
|-----|---|-----------------------------|
|     | s | The stream to extract from. |
| out | v | Extracted value.            |

**Returns**

The stream s.

Definition at line 1044 of file [ipc\\_stream](#).

References [L4::Ipc::Istream::get\(\)](#).

Here is the call graph for this function:

**17.190.2.6 operator>>() [2/6]**

```
template<typename T>
L4::Ipc::Istream & operator>> (
 L4::Ipc::Istream & s,
 L4::Ipc::Internal::Buf_cp_in< T > const & v) [inline]
```

Extract an array of T elements from the stream s.

**Parameters**

|     |   |                                                                                                |
|-----|---|------------------------------------------------------------------------------------------------|
|     | s | The stream to extract from.                                                                    |
| out | v | <a href="#">Buffer</a> description to copy the array to ( <a href="#">Ipc::Buf_cp_out()</a> ). |

**Returns**

The stream `s`.

This operator does a copy out of the data into the given buffer.

See `lpc::Buf_in`, `lpc::Buf_cp_in`, and `lpc::Buf_cp_out`.

Definition at line 1151 of file `ipc_stream`.

References [L4::lpc::Istream::get\(\)](#).

Here is the call graph for this function:

**17.190.2.7 operator>>() [3/6]**

```

template<typename T>
L4::Ipc::Istream & operator>> (
 L4::Ipc::Istream & s,
 L4::Ipc::Internal::Buf_in< T > const & v) [inline]

```

Extract an array of `T` elements from the stream `s`.

**Parameters**

|                  |                |                                                               |
|------------------|----------------|---------------------------------------------------------------|
|                  | <code>s</code> | The stream to extract from.                                   |
| <code>out</code> | <code>v</code> | Pointer to the extracted array ( <code>ipc_buf_in()</code> ). |

**Returns**

The stream `s`.

This operator actually does not copy out the data in the array, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

**Note**

If array does not fit into transmitted words size will be set to zero. Client has to implement check against zero.

See `lpc::Buf_in`, `lpc::Buf_cp_in`, and `lpc::Buf_cp_out`.

**17.190.2.8 operator>>() [4/6]**

```

template<typename T>
L4::Ipc::Istream & operator>> (
 L4::Ipc::Istream & s,
 L4::Ipc::Msg_ptr< T > const & v) [inline]

```

Extract an element of type `T` from the stream `s`.

**Parameters**

|                  |                |                                   |
|------------------|----------------|-----------------------------------|
|                  | <code>s</code> | The stream to extract from.       |
| <code>out</code> | <code>v</code> | Pointer to the extracted element. |

**Returns**

The stream `s`.

This operator actually does not copy out the data, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

See `Msg_ptr`.

## 17.209 l4/cxx/ref\_ptr\_list File Reference

Implementation of a list of ref-ptr-managed objects.

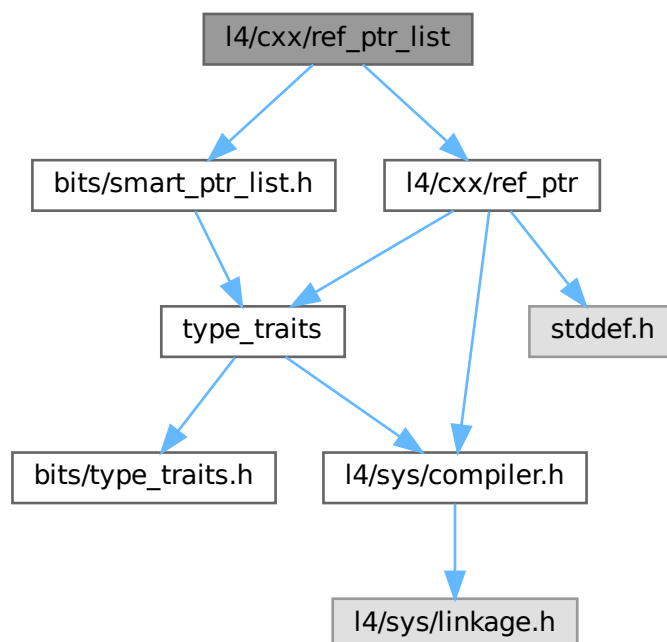

```

#include <l4/cxx/ref_ptr>
#include "bits/smart_ptr_list.h"

```

Include dependency graph for `ref_ptr_list`:

This graph shows which files directly or indirectly include this file:

## Data Structures

- struct `cxx::Ref_obj_list_item< T >`  
Item for list linked via `cxx::Ref_ptr` with default reference counting.

## Namespaces

- namespace `cxx`  
Our C++ library.

## Typedefs

- `template<typename T>`  
`using cxx::Ref_ptr_list_item = Bits::Smart_ptr_list_item<T, cxx::Ref_ptr<T> >`  
*Item for list linked with **cxx::Ref\_ptr**.*
- `template<typename T>`  
`using cxx::Ref_ptr_list = Bits::Smart_ptr_list<Ref_ptr_list_item<T> >`  
*Single-linked list where elements are connected via a **cxx::Ref\_ptr**.*

### 17.209.1 Detailed Description

Implementation of a list of ref-ptr-managed objects.

Definition in file [ref\\_ptr\\_list](#).

## 17.278.1 Detailed Description

Common [L4](#) ABI Data Types.

Definition in file [types.h](#).

## 17.278.2 Function Documentation

### 17.278.2.1 [l4\\_capability\\_next\(\)](#)

```
l4_cap_idx_t l4_capability_next (
 l4_cap_idx_t c) [inline]
```

Get the next capability selector after c.

#### Parameters

|                   |                                                                        |
|-------------------|------------------------------------------------------------------------|
| <a href="#">c</a> | The capability selector for which the next selector shall be computed. |
|-------------------|------------------------------------------------------------------------|

#### Returns

The next capability selector after c.

Definition at line [457](#) of file [types.h](#).

*Copy a rectangular area.*

## 17.283.1 Detailed Description

Bitmap renderer header file.

Definition in file [bitmap.h](#).

## 17.283.2 Typedef Documentation

### 17.283.2.1 [gfxbitmap\\_color\\_pix\\_t](#)

```
typedef unsigned int gfxbitmap_color_pix_t
```

Specific color type.

This color type is specific for a particular framebuffer, it can be use to write pixel on a framebuffer. Use [gfxbitmap\\_convert\\_color](#) to convert from [gfxbitmap\\_color\\_t](#) to [gfxbitmap\\_color\\_pix\\_t](#).

Definition at line 65 of file [bitmap.h](#).

### 17.283.2.2 [gfxbitmap\\_color\\_t](#)

```
typedef unsigned int gfxbitmap_color_t
```

Standard color type.

It's a RGB type with 8bits for each channel, regardless of the framebuffer used.

Definition at line 56 of file [bitmap.h](#).

### 17.283.3 Function Documentation

#### 17.283.3.1 gfxbitmap\_bmap()

```
void gfxbitmap_bmap (
 l4_uint8_t * vfb,
 l4re_video_view_info_t * vi,
 l4_int16_t x,
 l4_int16_t y,
 l4_uint32_t w,
 l4_uint32_t h,
 l4_uint8_t * bmap,
 gfxbitmap_color_pix_t fg,
 gfxbitmap_color_pix_t bg,
 struct gfxbitmap_offset * offset,
 l4_uint8_t mode)
```

Fill a rectangular area with a bicolor bitmap pattern.

#### Parameters

|               |                                     |
|---------------|-------------------------------------|
| <i>vfb</i>    | Frame buffer.                       |
| <i>vi</i>     | Frame buffer information structure. |
| <i>x</i>      | X position of area.                 |
| <i>y</i>      | Y position of area.                 |
| <i>w</i>      | Width of area.                      |
| <i>h</i>      | Height of area.                     |
| <i>bmap</i>   | Bitmap pattern.                     |
| <i>fg</i>     | Foreground color.                   |
| <i>bg</i>     | Background color.                   |
| <i>offset</i> | Offsets.                            |
| <i>mode</i>   | Mode                                |

See also

[pSLIM\\_BMAP\\_START\\_MSB](#) and [#pSLIM\\_BMAP\\_START\\_LSB](#).

#### 17.283.3.2 gfxbitmap\_convert\_color()

```
gfxbitmap_color_pix_t gfxbitmap_convert_color (
 l4re_video_view_info_t * vi,
 gfxbitmap_color_t rgb)
```

Convert a color.

Converts a given color in standard format to the format used in the framebuffer.

### 17.283.3.3 gfxbitmap\_copy()

```
void gfxbitmap_copy (
 l4_uint8_t * dest,
 l4_uint8_t * src,
 l4re_video_view_info_t * vi,
 int x,
 int y,
 int w,
 int h,
 int dx,
 int dy)
```

Copy a rectangular area.

#### Parameters

|             |                                     |
|-------------|-------------------------------------|
| <i>dest</i> | Destination frame buffer.           |
| <i>src</i>  | Source frame buffer.                |
| <i>vi</i>   | Frame buffer information structure. |
| <i>x</i>    | Source X position of area.          |
| <i>y</i>    | Source Y position of area.          |
| <i>w</i>    | Width of area.                      |
| <i>h</i>    | Height of area.                     |
| <i>dx</i>   | Source X position of area.          |
| <i>dy</i>   | Source Y position of area.          |

References [L4\\_END\\_DECLS](#).

### 17.283.3.4 gfxbitmap\_fill()

```
void gfxbitmap_fill (
 l4_uint8_t * vfb,
 l4re_video_view_info_t * vi,
 int x,
 int y,
 int w,
 int h,
 gfxbitmap_color_pix_t color)
```

Fill a rectangular area with a color.

#### Parameters

|            |                                     |
|------------|-------------------------------------|
| <i>vfb</i> | Frame buffer.                       |
| <i>vi</i>  | Frame buffer information structure. |
| <i>x</i>   | X position of area.                 |
| <i>y</i>   | Y position of area.                 |

|              |                 |
|--------------|-----------------|
| <i>w</i>     | Width of area.  |
| <i>h</i>     | Height of area. |
| <i>color</i> | Color of area.  |

### 17.283.3.5 gfxbitmap\_set()

```
void gfxbitmap_set (
 14_uint8_t * vfb,
 14re_video_view_info_t * vi,
 14_int16_t x,
 14_int16_t y,
 14_uint32_t w,
 14_uint32_t h,
 14_uint32_t xoffs,
 14_uint32_t yoffs,
 14_uint8_t * pmap,
 struct gfxbitmap_offset * offset,
 14_uint32_t pwidth)
```

Set area from source area.

#### Parameters

|               |                                     |
|---------------|-------------------------------------|
| <i>vfb</i>    | Frame buffer.                       |
| <i>vi</i>     | Frame buffer information structure. |
| <i>x</i>      | X position of area.                 |
| <i>y</i>      | Y position of area.                 |
| <i>w</i>      | Width of area.                      |
| <i>h</i>      | Height of area.                     |
| <i>pmap</i>   | Source.                             |
| <i>xoffs</i>  | X offset.                           |
| <i>yoffs</i>  | Y offset.                           |
| <i>offset</i> | Offsets.                            |
| <i>pwidth</i> | Width of source in bytes.           |

## 17.285 l4/libgfxbitmap/font.h File Reference

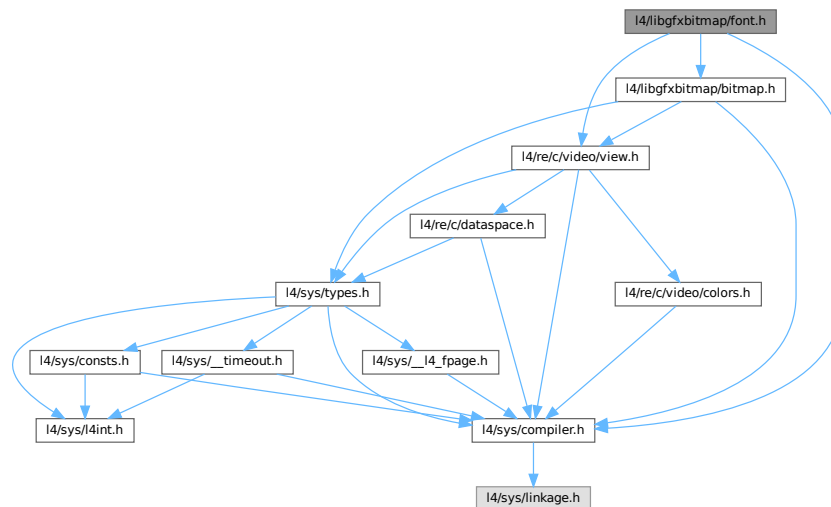

Bitmap font renderer header file.

```

#include <l4/sys/compiler.h>
#include <l4/re/c/video/view.h>
#include <l4/libgfxbitmap/bitmap.h>

```

Include dependency graph for font.h:

## Macros

- `#define GFXBITMAP_DEFAULT_FONT (void *)0`  
Constant to use for the default font.

## Enumerations

- enum  
Constant for length field.

## Functions

- int `gfxbitmap_font_init` (void)  
Initialize the library.
- `gfxbitmap_font_t` `gfxbitmap_font_get` (const char \*name)  
Get a font descriptor.
- unsigned `gfxbitmap_font_width` (`gfxbitmap_font_t` font)  
Get the font width.
- unsigned `gfxbitmap_font_height` (`gfxbitmap_font_t` font)  
Get the font height.
- void \* `gfxbitmap_font_data` (`gfxbitmap_font_t` font, unsigned c)  
Get bitmap font data for a specific character.
- void `gfxbitmap_font_text` (void \*fb, `l4re_video_view_info_t` \*vi, `gfxbitmap_font_t` font, const char \*text, unsigned len, unsigned x, unsigned y, `gfxbitmap_color_pix_t` fg, `gfxbitmap_color_pix_t` bg)  
Render a string to a framebuffer.
- void `gfxbitmap_font_text_scale` (void \*fb, `l4re_video_view_info_t` \*vi, `gfxbitmap_font_t` font, const char \*text, unsigned len, unsigned x, unsigned y, `gfxbitmap_color_pix_t` fg, `gfxbitmap_color_pix_t` bg, int scale\_x, int scale\_y)  
Render a string to a framebuffer, including scaling.

## Variables

- [L4\\_BEGIN\\_DECLS](#) typedef void \* **gfxbitmap\_font\_t**  
*Font.*

## 17.285.1 Detailed Description

Bitmap font renderer header file.

Definition in file [font.h](#).

## 17.285.2 Enumeration Type Documentation

### 17.285.2.1 anonymous enum

`anonymous enum`

Constant for length field.

Use this if the function should call strlen on the text argument itself.

Definition at line 38 of file [font.h](#).

## 17.285.3 Function Documentation

### 17.285.3.1 gfxbitmap\_font\_data()

```
void * gfxbitmap_font_data (
 gfxbitmap_font_t font,
 unsigned c)
```

Get bitmap font data for a specific character.

#### Parameters

|             |            |
|-------------|------------|
| <i>font</i> | Font.      |
| <i>c</i>    | Character. |

#### Returns

Pointer to bmap data, NULL on error.

References [gfxbitmap\\_font\\_t](#), and [L4\\_CV](#).

### 17.285.3.2 gfxbitmap\_font\_get()

```
gfxbitmap_font_t gfxbitmap_font_get (
 const char * name)
```

Get a font descriptor.

#### Parameters

---

|             |                   |
|-------------|-------------------|
| <i>name</i> | Name of the font. |
|-------------|-------------------|

**Returns**

A (opaque) font descriptor, or NULL if font could not be found.

References [gfxbitmap\\_font\\_t](#), and [L4\\_CV](#).

**17.285.3.3 gfxbitmap\_font\_height()**

```
unsigned gfxbitmap_font_height (
 gfxbitmap_font_t font)
```

Get the font height.

**Parameters**

|             |       |
|-------------|-------|
| <i>font</i> | Font. |
|-------------|-------|

**Returns**

Font height, 0 if font height could not be retrieved.

References [gfxbitmap\\_font\\_t](#), and [L4\\_CV](#).

**17.285.3.4 gfxbitmap\_font\_init()**

```
int gfxbitmap_font_init (
 void)
```

Initialize the library.

This function must be called before any other font function of this library.

**Returns**

0 on success, other on error

References [L4\\_CV](#).

**17.285.3.5 gfxbitmap\_font\_text()**

```
void gfxbitmap_font_text (
 void * fb,
 l4re_video_view_info_t * vi,
 gfxbitmap_font_t font,
 const char * text,
 unsigned len,
 unsigned x,
 unsigned y,
 gfxbitmap_color_pix_t fg,
 gfxbitmap_color_pix_t bg)
```

Render a string to a framebuffer.

**Parameters**

|             |                                          |
|-------------|------------------------------------------|
| <i>fb</i>   | Pointer to frame buffer.                 |
| <i>vi</i>   | Frame buffer info structure.             |
| <i>font</i> | Font.                                    |
| <i>text</i> | Text string.                             |
| <i>len</i>  | Length of the text string.               |
| <i>x</i>    | Horizontal position in the frame buffer. |
| <i>y</i>    | Vertical position in the frame buffer.   |
| <i>fg</i>   | Foreground color.                        |
| <i>bg</i>   | Background color.                        |

References [gfxbitmap\\_font\\_t](#), and [L4\\_CV](#).

### 17.285.3.6 gfxbitmap\_font\_text\_scale()

```
void gfxbitmap_font_text_scale (
 void * fb,
 l4re_video_view_info_t * vi,
 gfxbitmap_font_t font,
 const char * text,
 unsigned len,
 unsigned x,
 unsigned y,
 gfxbitmap_color_pix_t fg,
 gfxbitmap_color_pix_t bg,
 int scale_x,
 int scale_y)
```

Render a string to a framebuffer, including scaling.

#### Parameters

|                |                                          |
|----------------|------------------------------------------|
| <i>fb</i>      | Pointer to frame buffer.                 |
| <i>vi</i>      | Frame buffer info structure.             |
| <i>font</i>    | Font.                                    |
| <i>text</i>    | Text string.                             |
| <i>len</i>     | Length of the text string.               |
| <i>x</i>       | Horizontal position in the frame buffer. |
| <i>y</i>       | Vertical position in the frame buffer.   |
| <i>fg</i>      | Foreground color.                        |
| <i>bg</i>      | Background color.                        |
| <i>scale_x</i> | Horizontal scale factor.                 |
| <i>scale_y</i> | Vertical scale factor.                   |

References [gfxbitmap\\_font\\_t](#), and [L4\\_END\\_DECLS](#).

### 17.285.3.7 gfxbitmap\_font\_width()

```
unsigned gfxbitmap_font_width (
 gfxbitmap_font_t font)
```

Get the font width.

#### Parameters

|             |       |
|-------------|-------|
| <i>font</i> | Font. |
|-------------|-------|

#### Returns

Font width, 0 if font width could not be retrieved.

References [gfxbitmap\\_font\\_t](#), and [L4\\_CV](#).

## 17.291 l4/re/c/dma\_space.h File Reference

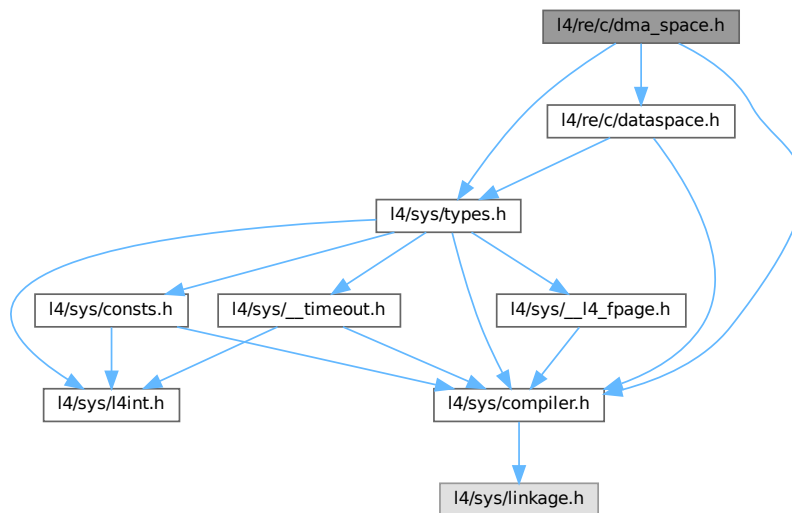

DMA space C interface.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/re/c/dataspace.h>

```

Include dependency graph for dma\_space.h:

### Typedefs

- typedef `l4_cap_idx_t l4re_dma_space_t`  
DMA space capability type.
- typedef `l4_uint64_t l4re_dma_space_dma_addr_t`  
Data type for DMA addresses.

### Enumerations

- enum `l4re_dma_space_direction` { `L4RE_DMA_SPACE_BIDIRECTIONAL`, `L4RE_DMA_SPACE_TO_DEVICE`, `L4RE_DMA_SPACE_FROM_DEVICE`, `L4RE_DMA_SPACE_NONE` }  
Direction of the DMA transfers.
- enum `l4re_dma_space_space_attris` { `L4RE_DMA_SPACE_COHERENT` = 1 << 0, `L4RE_DMA_SPACE_PHYS_SPACE` = 1 << 1 }  
Attributes assigned to the DMA space when associated with a specific device.

## Functions

- long [l4re\\_dma\\_space\\_map](#) ([l4re\\_dma\\_space\\_t](#) dma, [l4re\\_ds\\_t](#) src, [l4re\\_ds\\_offset\\_t](#) offset, [l4\\_size\\_t](#) \*size, unsigned long attrs, enum [l4re\\_dma\\_space\\_direction](#) dir, [l4re\\_dma\\_space\\_dma\\_addr\\_t](#) \*dma\_addr) [L4\\_NOTHROW](#)  
*Map the given part of this data space into the DMA address space.*
- long [l4re\\_dma\\_space\\_unmap](#) ([l4re\\_dma\\_space\\_t](#) dma, [l4re\\_dma\\_space\\_dma\\_addr\\_t](#) dma\_addr, [l4\\_size\\_t](#) size, unsigned long attrs, enum [l4re\\_dma\\_space\\_direction](#) dir) [L4\\_NOTHROW](#)  
*Unmap the given part of this data space from the DMA address space.*
- long [l4re\\_dma\\_space\\_associate](#) ([l4re\\_dma\\_space\\_t](#) dma, [l4\\_cap\\_idx\\_t](#) dma\_task, unsigned long attr) [L4\\_NOTHROW](#)  
*Associate a (kernel) [DMA space](#) for a device to this [Dma\\_space](#).*
- long [l4re\\_dma\\_space\\_disassociate](#) ([l4re\\_dma\\_space\\_t](#) dma)  
*Disassociate the (kernel) [DMA space](#) from this [Dma\\_space](#).*

### 17.291.1 Detailed Description

DMA space C interface.

Definition in file [dma\\_space.h](#).

### 17.291.2 Enumeration Type Documentation

#### 17.291.2.1 l4re\_dma\_space\_direction

enum [l4re\\_dma\\_space\\_direction](#)

Direction of the DMA transfers.

#### Enumerator

|                                              |                                       |
|----------------------------------------------|---------------------------------------|
| <a href="#">L4RE_DMA_SPACE_BIDIRECTIONAL</a> | device reads and writes to the memory |
| <a href="#">L4RE_DMA_SPACE_TO_DEVICE</a>     | device reads the memory               |
| <a href="#">L4RE_DMA_SPACE_FROM_DEVICE</a>   | device writes to the memory           |
| <a href="#">L4RE_DMA_SPACE_NONE</a>          | device is coherently connected        |

Definition at line 27 of file [dma\\_space.h](#).

#### 17.291.2.2 l4re\_dma\_space\_space\_attrbs

enum [l4re\\_dma\\_space\\_space\\_attrbs](#)

Attributes assigned to the DMA space when associated with a specific device.

See also

[Space\\_attrbs](#)

#### Enumerator

|                           |                                                                                                                                               |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| L4RE_DMA_SPACE_COHERENT   | The device is connected coherently with the cache. This means that the map() and unmap() do not need to sync CPU caches before and after DMA. |
| L4RE_DMA_SPACE_PHYS_SPACE | The DMA space has no DMA task assigned and uses the CPUs physical memory.                                                                     |

Include dependency graph for inhibitor.h:

## Functions

- [L4\\_BEGIN\\_DECLS](#) long [l4re\\_inhibitor\\_acquire](#) ([l4\\_cap\\_idx\\_t](#) cap, [l4\\_umword\\_t](#) id, char const \*reason)  
*Acquire an inhibitor lock.*
- long [l4re\\_inhibitor\\_release](#) ([l4\\_cap\\_idx\\_t](#) cap, [l4\\_umword\\_t](#) id)  
*Release an inhibitor lock.*
- long [l4re\\_inhibitor\\_next\\_lock\\_info](#) ([l4\\_cap\\_idx\\_t](#) cap, char \*name, unsigned len, [l4\\_mword\\_t](#) current\_id)  
*Get information for the next available inhibitor lock.*

## 17.298.1 Detailed Description

Inhibitor C interface.

Definition in file [inhibitor.h](#).

## 17.298.2 Function Documentation

### 17.298.2.1 l4re\_inhibitor\_acquire()

```
L4_BEGIN_DECLS long l4re_inhibitor_acquire (
 l4_cap_idx_t cap,
 l4_umword_t id,
 char const * reason)
```

Acquire an inhibitor lock.

#### Parameters

|               |                                                                                        |
|---------------|----------------------------------------------------------------------------------------|
| <i>cap</i>    | Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> )             |
| <i>id</i>     | ID of the inhibitor lock that shall be acquired.                                       |
| <i>reason</i> | Reason why the inhibitor lock is acquired. (Used for informing the user or debugging.) |

#### Returns

0 for success, <0 on error.

#### See also

[L4Re::Inhibitor::acquire\(\)](#).

References [L4\\_CV](#), and [L4\\_EXPORT](#).

### 17.298.2.2 l4re\_inhibitor\_next\_lock\_info()

```
long l4re_inhibitor_next_lock_info (
 l4_cap_idx_t cap,
 char * name,
 unsigned len,
 l4_mword_t current_id)
```

Get information for the next available inhibitor lock.

#### Parameters

|                         |                                                                                                 |
|-------------------------|-------------------------------------------------------------------------------------------------|
| <i>cap</i>              | Capability to the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> )                       |
| <i>name</i>             | A pointer to a buffer for the name of the lock.                                                 |
| <i>len</i>              | The length of the available buffer (usually <a href="#">L4Re::Inhibitor::Name_max</a> is used). |
| <i>current↔<br/>_id</i> | The ID of the last available lock, use -1 to get the first lock.                                |

### Return values

|                   |                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------|
| <i>&gt;0</i>      | The ID of the next available lock if there is one (in this case name shall contain the name of the inhibitor lock). |
| <i>-L4_ENODEV</i> | if there are no more locks.                                                                                         |
| <i>&lt;0</i>      | Any other negative failure value.                                                                                   |

### See also

[L4Re::Inhibitor::next\\_lock\\_info\(\)](#).

References [L4\\_END\\_DECLS](#).

### 17.298.2.3 l4re\_inhibitor\_release()

```
long l4re_inhibitor_release (
 l4_cap_idx_t cap,
 l4_umword_t id)
```

Release an inhibitor lock.

### Parameters

|            |                                                                             |
|------------|-----------------------------------------------------------------------------|
| <i>cap</i> | Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> ). |
| <i>id</i>  | ID of inhibitor that shall be released.                                     |

### Returns

0 for success, <0 on error.

### See also

## 17.300 l4/re/c/log.h File Reference

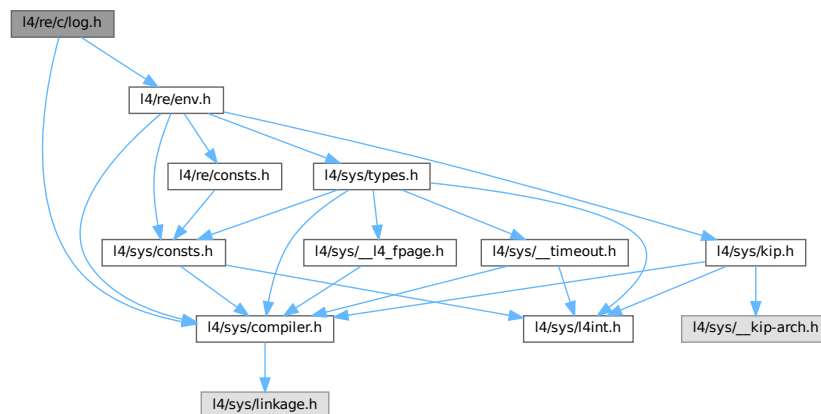

Log C interface.

```

#include <l4/re/env.h>
#include <l4/sys/compiler.h>

```

Include dependency graph for log.h:

### Functions

- `L4_BEGIN_DECLS` void `l4re_log_print` (char const \*string) `L4_NOTHROW`  
Write a null terminated string to the default log.
- void `l4re_log_printn` (char const \*string, int len) `L4_NOTHROW`  
Write a string of a given length to the default log.

- void `l4re_log_print_srv` (const `l4_cap_idx_t` logcap, char const \*string) `L4_NOTHROW`  
Write a null terminated string to a log.
- void `l4re_log_printn_srv` (const `l4_cap_idx_t` logcap, char const \*string, int len) `L4_NOTHROW`  
Write a string of a given length to a log.

## 17.310 l4re/c/util/cap\_alloc.h File Reference

Capability allocator C interface.

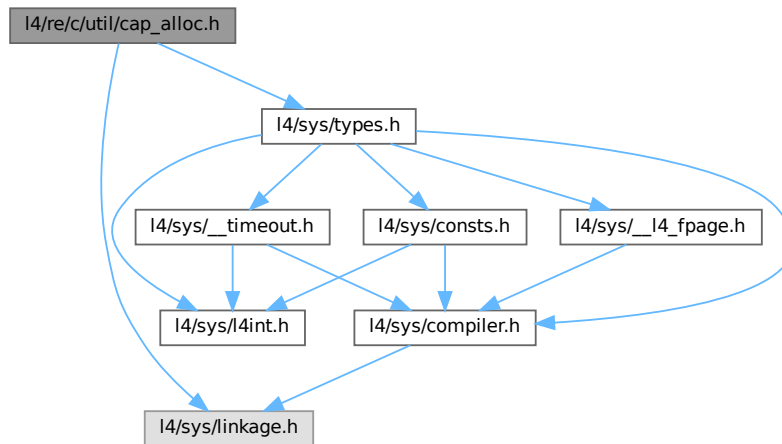

```

#include <l4/sys/types.h>
#include <l4/sys/linkage.h>

```

Include dependency graph for cap\_alloc.h:

## Functions

- `L4_BEGIN_DECLS l4_cap_idx_t l4re_util_cap_alloc (void) L4_NOTHROW`  
Get free capability index at capability allocator.
- `void l4re_util_cap_free (l4_cap_idx_t cap) L4_NOTHROW`  
Return capability index to capability allocator.
- `void l4re_util_cap_free_um (l4_cap_idx_t cap) L4_NOTHROW`  
Return capability index to capability allocator, and unmaps the object.
- `long l4re_util_cap_last (void) L4_NOTHROW`  
Return last capability index the allocator can return.

## 17.312 l4/re/c/util/kumem\_alloc.h File Reference

Kumem allocator utility C interface.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/linkage.h>
Include dependency graph for kumem_alloc.h:

```

### Functions

- [L4\\_BEGIN\\_DECLS](#) `int l4re_util_kumem_alloc (l4_addr_t *mem, unsigned pages_order, l4\_cap\_idx\_t task, l4\_cap\_idx\_t rm) L4\_NOTHROW`  
Allocate state area.

### 17.312.1 Detailed Description

Kumem allocator utility C interface.

Definition in file [kumem\\_alloc.h](#).

## 17.312.2 Function Documentation

### 17.312.2.1 l4re\_util\_kumem\_alloc()

```
L4_BEGIN_DECLS int l4re_util_kumem_alloc (
 l4_addr_t * mem,
 unsigned pages_order,
 l4_cap_idx_t task,
 l4_cap_idx_t rm)
```

Allocate state area.

#### Parameters

|     |                    |                                            |
|-----|--------------------|--------------------------------------------|
| out | <i>mem</i>         | Pointer to memory that has been allocated. |
|     | <i>pages_order</i> | Size to allocate, in log2 pages.           |
|     | <i>task</i>        | Task to use for allocation.                |
|     | <i>rm</i>          | Region manager to use for allocation.      |

#### Return values

|    |                       |
|----|-----------------------|
| 0  | for success           |
| <0 | error code on failure |

#### Note

The amount of kernel-user memory that can be allocated at once is limited by the used kernel implementation. The minimum allocatable amount is one page. A portable implementation should not depend on allocations greater than 16KiB to succeed.

#### Examples

[examples/sys/aliens/main.c](#), and [examples/sys/utcb-ipc/main.c](#).

References [L4\\_END\\_DECLS](#), and [L4\\_NOTHROW](#).

```

Include dependency graph for goos.h:

This graph shows which files directly or indirectly include this file:

## Data Structures

- struct [l4re\\_video\\_goos\\_info\\_t](#)  
*Goos information structure.*

## Typedefs

- typedef [l4\\_cap\\_idx\\_t](#) [l4re\\_video\\_goos\\_t](#)  
*Goos object type.*

## Enumerations

- enum [l4re\\_video\\_goos\\_info\\_flags\\_t](#) { [F\\_l4re\\_video\\_goos\\_auto\\_refresh](#) = 0x01 , [F\\_l4re\\_video\\_goos\\_pointer](#) = 0x02 , [F\\_l4re\\_video\\_goos\\_dynamic\\_views](#) = 0x04 , [F\\_l4re\\_video\\_goos\\_dynamic\\_buffers](#) = 0x08 }  
*Flags of information on the goos.*

## Functions

- `L4_BEGIN_DECLS` `int` `l4re_video_goos_info` (`l4re_video_goos_t` goos, `l4re_video_goos_info_t` \*ginfo) `L4_NOTHROW`  
*Get information on a goos.*
- `int` `l4re_video_goos_refresh` (`l4re_video_goos_t` goos, `int` x, `int` y, `int` w, `int` h) `L4_NOTHROW`  
*Flush a rectangle of pixels of the goos screen.*
- `int` `l4re_video_goos_create_buffer` (`l4re_video_goos_t` goos, `unsigned long` size, `l4_cap_idx_t` buffer) `L4_NOTHROW`  
*Create a new buffer (memory buffer) for pixel data.*
- `int` `l4re_video_goos_delete_buffer` (`l4re_video_goos_t` goos, `unsigned` idx) `L4_NOTHROW`  
*Delete a pixel buffer.*
- `int` `l4re_video_goos_get_static_buffer` (`l4re_video_goos_t` goos, `unsigned` idx, `l4_cap_idx_t` buffer) `L4_NOTHROW`  
*Get the data-space capability of the static pixel buffer.*
- `int` `l4re_video_goos_create_view` (`l4re_video_goos_t` goos, `l4re_video_view_t` \*view) `L4_NOTHROW`  
*Create a new view (.*
- `int` `l4re_video_goos_delete_view` (`l4re_video_goos_t` goos, `l4re_video_view_t` \*view) `L4_NOTHROW`  
*Delete a view.*
- `int` `l4re_video_goos_get_view` (`l4re_video_goos_t` goos, `unsigned` idx, `l4re_video_view_t` \*view) `L4_NOTHROW`  
*Get a view for the given index.*

### 17.318.1 Detailed Description

#include <l4/re/c/video/colors.h>

```

Include dependency graph for view.h:

This graph shows which files directly or indirectly include this file:

## Data Structures

- struct [l4re\\_video\\_view\\_info\\_t](#)  
View information structure.
- struct [l4re\\_video\\_view\\_t](#)  
C representation of a goos view.

## Typedefs

- typedef struct l4re\_video\_view\_info\_t [l4re\\_video\\_view\\_info\\_t](#)  
View information structure.
- typedef struct l4re\_video\_view\_t [l4re\\_video\\_view\\_t](#)  
C representation of a goos view.

## Enumerations

- enum `l4re_video_view_info_flags_t` {  
`F_l4re_video_view_none` = 0x00 , `F_l4re_video_view_set_buffer` = 0x01 , `F_l4re_video_view_set_buffer_offset` = 0x02 , `F_l4re_video_view_set_bytes_per_line` = 0x04 ,  
`F_l4re_video_view_set_pixel` = 0x08 , `F_l4re_video_view_set_position` = 0x10 , `F_l4re_video_view_dyn_allocated` = 0x20 , `F_l4re_video_view_set_background` = 0x40 ,  
`F_l4re_video_view_set_flags` = 0x80 , **`F_l4re_video_view_fully_dynamic`** , `F_l4re_video_view_above` = 0x01000 , `F_l4re_video_view_flags_mask` = 0xff000 }

*Flags of information on a view.*

## Functions

- `L4_BEGIN_DECLS` int `l4re_video_view_refresh` (`l4re_video_view_t` \*view, int x, int y, int w, int h) `L4_NOTHROW`  
*Flush the given rectangle of pixels of the given view.*
- int `l4re_video_view_get_info` (`l4re_video_view_t` \*view, `l4re_video_view_info_t` \*info) `L4_NOTHROW`  
*Retrieve information about the given view.*
- int `l4re_video_view_set_info` (`l4re_video_view_t` \*view, `l4re_video_view_info_t` \*info) `L4_NOTHROW`  
*Set properties of the view.*
- int `l4re_video_view_set_viewport` (`l4re_video_view_t` \*view, int x, int y, int w, int h, unsigned long bofs) `L4_NOTHROW`  
*Set the viewport parameters of a view.*
- int `l4re_video_view_stack` (`l4re_video_view_t` \*view, `l4re_video_view_t` \*pivot, int behind) `L4_NOTHROW`  
*Change the stacking order in the stack of visible views.*

## 17.320.1 Detailed Description

### Note

The C interface of `L4Re::Video` does *NOT* reflect the full C++ interface on purpose. Use the C++ where possible.

## 17.330 l4/re/elf\_aux.h File Reference

Auxiliary information for binaries.

```
#include <l4/sys/types.h>
Include dependency graph for elf_aux.h:
```

### Data Structures

- struct `l4re_elf_aux_t`  
Generic header for each auxiliary vector element.
- struct `l4re_elf_aux_vma_t`  
Auxiliary vector element for a reserved virtual memory area.
- struct `l4re_elf_aux_mword_t`  
Auxiliary vector element for a single unsigned data word.

### Macros

- #define `L4RE_ELF_AUX_ELEM` `const __attribute__((used, section(".ro.l4re_elf_aux"), aligned(sizeof(l4_umword_t))))`  
Define an auxiliary vector element.
- #define `L4RE_ELF_AUX_ELEM_T` `(type, id, tag, val...)`  
Define an auxiliary vector element.

### Typedefs

- typedef struct `l4re_elf_aux_t` `l4re_elf_aux_t`  
Generic header for each auxiliary vector element.
- typedef struct `l4re_elf_aux_vma_t` `l4re_elf_aux_vma_t`  
Auxiliary vector element for a reserved virtual memory area.
- typedef struct `l4re_elf_aux_mword_t` `l4re_elf_aux_mword_t`  
Auxiliary vector element for a single unsigned data word.

## Enumerations

- enum {

## 17.430.1 Function Documentation

### 17.430.1.1 [l4shmc\\_rb\\_attach\\_receiver\(\)](#)

```
void l4shmc_rb_attach_receiver (
 l4shmc_ringbuf_t * buf,
 l4_cap_idx_t owner)
```

Attach to receiver signal of a ring buffer.

Attach owner to the receiver-side signal of a ring buffer, which is triggered whenever new data has been produced.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

#### Parameters

|              |                               |
|--------------|-------------------------------|
| <i>buf</i>   | pointer to ring buffer struct |
| <i>owner</i> | owner thread                  |

References [L4\\_CV](#).

### 17.430.1.2 [l4shmc\\_rb\\_attach\\_sender\(\)](#)

```
int l4shmc_rb_attach_sender (
 l4shmc_ringbuf_t * buf,
 char const * signal_name,
 l4_cap_idx_t owner)
```

Attach to sender signal of a ring buffer.

Attach owner to the sender-side signal of a ring buffer, which is triggered whenever new space has been freed in the buffer for the sender to write to.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

#### Parameters

|                    |                               |
|--------------------|-------------------------------|
| <i>buf</i>         | pointer to ring buffer struct |
| <i>signal_name</i> | signal base name              |
| <i>owner</i>       | owner thread                  |

#### Returns

0 on success, error otherwise

References [L4\\_CV](#).

#### 17.430.1.3 l4shmc\_rb\_deinit\_buffer()

```
void l4shmc_rb_deinit_buffer (
 l4shmc_ringbuf_t * buf)
```

De-init a ring buffer.

#### Parameters

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

#### 17.430.1.4 l4shmc\_rb\_init\_buffer()

```
int l4shmc_rb_init_buffer (
 l4shmc_ringbuf_t * buf,
 l4shmc_area_t * area,
 char const * chunk_name,
 char const * signal_name,
 unsigned size)
```

Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.

This needs to be done by one of the participating parties when setting up communication channel.

#### Precondition

area has been attached using [l4shmc\\_attach\(\)](#).

#### Parameters

|                   |                                      |
|-------------------|--------------------------------------|
| <i>buf</i>        | pointer to ring buffer struct        |
| <i>area</i>       | pointer to SHMC area                 |
| <i>chunk_name</i> | name of SHMC chunk to create in area |

|                    |                                      |
|--------------------|--------------------------------------|
| <i>signal_name</i> | base name for SHMC signals to create |
| <i>size</i>        | chunk size                           |

**Returns**

0 on success, error otherwise

References [L4\\_CV](#).

**17.430.1.5 l4shmc\_rb\_init\_receiver()**

```
int l4shmc_rb_init_receiver (
 l4shmc_ringbuf_t * buf,
 l4shmc_area_t * area,
 char const * chunk_name,
 char const * signal_name)
```

Initialize receive buffer.

Initialize the receiver-side of a ring buffer. This requires the underlying SHMC chunk and the corresponding signals to be valid already (read: to be initialized by the sender).

**Precondition**

chunk & signals have been created and initialized by the sender side

**Parameters**

|                    |                                      |
|--------------------|--------------------------------------|
| <i>buf</i>         | pointer to ring buffer struct        |
| <i>area</i>        | pointer to SHMC area                 |
| <i>chunk_name</i>  | name of SHMC chunk to create in area |
| <i>signal_name</i> | base name for SHMC signals to create |

**Returns**

0 on success, error otherwise

References [L4\\_CV](#).

**17.430.1.6 l4shmc\_rb\_receiver\_copy\_out()**

```
int l4shmc_rb_receiver_copy_out (
 l4shmc_ringbuf_head_t * head,
 char * target,
 unsigned * tsize)
```

Copy data out of the buffer.

**Parameters**

|                |               |                                                                                  |
|----------------|---------------|----------------------------------------------------------------------------------|
|                | <i>head</i>   | ring buffer head pointer                                                         |
|                | <i>target</i> | valid target buffer                                                              |
| <i>in, out</i> | <i>size</i>   | size of target buffer (must be $\geq$ packet size!); contains the real data size |

**Returns**

0 on success, negative error otherwise

References [L4\\_CV](#).

**17.430.1.7 l4shmc\_rb\_receiver\_notify\_done()**

```
void l4shmc_rb_receiver_notify_done (
 l4shmc_ringbuf_t * buf)
```

Notify producer that space is available.

**Parameters**

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

**17.430.1.8 l4shmc\_rb\_receiver\_read\_next\_size()**

```
int l4shmc_rb_receiver_read_next_size (
 l4shmc_ringbuf_head_t * head)
```

Have a look at the ring buffer and see which size the next packet to be read has.

Does not modify anything.

**Returns**

size of next buffer or -1 if no data available

References [L4\\_CV](#), and [L4\\_END\\_DECLS](#).

**17.430.1.9 l4shmc\_rb\_receiver\_wait\_for\_data()**

```
int l4shmc_rb_receiver_wait_for_data (
 l4shmc_ringbuf_t * buf,
 int blocking)
```

Check if (and optionally block until) new data is ready.

**Parameters**

|                 |                                            |
|-----------------|--------------------------------------------|
| <i>buf</i>      | pointer to ring buffer struct              |
| <i>blocking</i> | block if data is not available immediately |

Returns immediately, if data is available.

#### Returns

0 success, data available, != 0 otherwise

References [L4\\_CV](#).

#### 17.430.1.10 l4shmc\_rb\_sender\_alloc\_packet()

```
char * l4shmc_rb_sender_alloc_packet (
 l4shmc_ringbuf_head_t * head,
 unsigned psize)
```

Allocate a packet of a given size within the ring buffer.

This packet may wrap around at the end of the buffer. Users need to be aware of that.

#### Parameters

|              |                          |
|--------------|--------------------------|
| <i>head</i>  | ring buffer head pointer |
| <i>psize</i> | packet size              |

#### Returns

valid address on success

#### Return values

|             |                               |
|-------------|-------------------------------|
| <i>NULL</i> | if not enough space available |
|-------------|-------------------------------|

References [L4\\_CV](#).

#### 17.430.1.11 l4shmc\_rb\_sender\_commit\_packet()

```
void l4shmc_rb_sender_commit_packet (
 l4shmc_ringbuf_t * buf)
```

Tell the consumer that new data is available.

#### Parameters

---

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

#### 17.430.1.12 l4shmc\_rb\_sender\_next\_copy\_in()

```
int l4shmc_rb_sender_next_copy_in (
 l4shmc_ringbuf_t * buf,
 char * data,
 unsigned size,
 int block_if_necessary)
```

Copy in packet from an external data source.

This is the function you'll want to use. Just pass it a buffer pointer and let the lib do the work.

##### Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <i>buf</i>                | pointer to ring buffer struct        |
| <i>data</i>               | valid buffer                         |
| <i>size</i>               | data size                            |
| <i>block_if_necessary</i> | bool: block if buffer currently full |

##### Return values

|                   |                                          |
|-------------------|------------------------------------------|
| <i>0</i>          | on success                               |
| <i>-L4_ENOMEM</i> | if block == false and no space available |

References [L4\\_CV](#).

#### 17.430.1.13 l4shmc\_rb\_sender\_put\_data()

```
void l4shmc_rb_sender_put_data (
 l4shmc_ringbuf_t * buf,
 char * addr,
 char * data,
 unsigned dsize)
```

Copy data into a previously allocated packet.

This function is wrap-around aware.

##### Parameters

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

|              |                                                                |
|--------------|----------------------------------------------------------------|
| <i>addr</i>  | valid destination (allocate with <code>alloc_packet()</code> ) |
| <i>data</i>  | data source                                                    |
| <i>dsize</i> | data size                                                      |

References [L4\\_CV](#).

*Wait on a specific signal.*
- long [l4shmc\\_wait\\_signal\\_to](#) (l4shmc\_signal\_t \*signal, l4\_timeout\_t timeout)

*Wait on a specific signal, with timeout.*
- long [l4shmc\\_wait\\_signal\\_try](#) (l4shmc\_signal\_t \*signal)

- Check whether a specific signal has an event pending.*

  - long [l4shmc\\_wait\\_chunk](#) (l4shmc\_chunk\_t \*chunk)

*Wait on a specific chunk.*
- long [l4shmc\\_wait\\_chunk\\_to](#) (l4shmc\_chunk\_t \*chunk, [l4\\_timeout\\_t](#) timeout)

*Check whether a specific chunk has an event pending, with timeout.*
- long [l4shmc\\_wait\\_chunk\\_try](#) (l4shmc\_chunk\_t \*chunk)

*Check whether a specific chunk has an event pending.*
- long [l4shmc\\_chunk\\_consumed](#) (l4shmc\_chunk\_t \*chunk)

*Mark a chunk as free.*
- long [l4shmc\\_connect\\_chunk\\_signal](#) (l4shmc\_chunk\_t \*chunk, l4shmc\_signal\_t \*signal)

*Connect a signal with a chunk.*
- long [l4shmc\\_is\\_chunk\\_ready](#) (l4shmc\_chunk\_t const \*chunk)

*Check whether data is available.*
- long [l4shmc\\_is\\_chunk\\_clear](#) (l4shmc\_chunk\_t const \*chunk)

*Check whether chunk is free.*
- void \* [l4shmc\\_chunk\\_ptr](#) (l4shmc\_chunk\_t const \*chunk)

*Get data pointer to chunk.*
- long [l4shmc\\_chunk\\_size](#) (l4shmc\_chunk\_t const \*chunk)

*Get current size of a chunk.*
- long [l4shmc\\_chunk\\_capacity](#) (l4shmc\_chunk\_t const \*chunk)

*Get capacity of a chunk.*
- l4shmc\_signal\_t \* [l4shmc\\_chunk\\_signal](#) (l4shmc\_chunk\_t const \*chunk)

*Get the registered signal of a chunk.*
- [l4\\_cap\\_idx\\_t](#) [l4shmc\\_signal\\_cap](#) (l4shmc\_signal\_t const \*signal)

*Get the signal capability of a signal.*
- long [l4shmc\\_check\\_magic](#) (l4shmc\_chunk\_t const \*chunk)

*Check magic value of a chunk.*
- long [l4shmc\\_area\\_size](#) (l4shmc\_area\_t const \*shmarea)

*Get size of shared memory area.*
- long [l4shmc\\_area\\_size\\_free](#) (l4shmc\_area\_t const \*shmarea)

*Get free size of shared memory area.*
- long [l4shmc\\_area\\_overhead](#) (void)

*Get memory overhead per area that is not available for chunks.*
- long [l4shmc\\_chunk\\_overhead](#) (void)

*Get memory overhead required in addition to the chunk capacity for adding one chunk.*

### 17.432.1 Detailed Description

Shared memory library header file.

Definition in file [shmc.h](#).

## 17.437 l4/sys/\_\_ktrace-impl.h File Reference

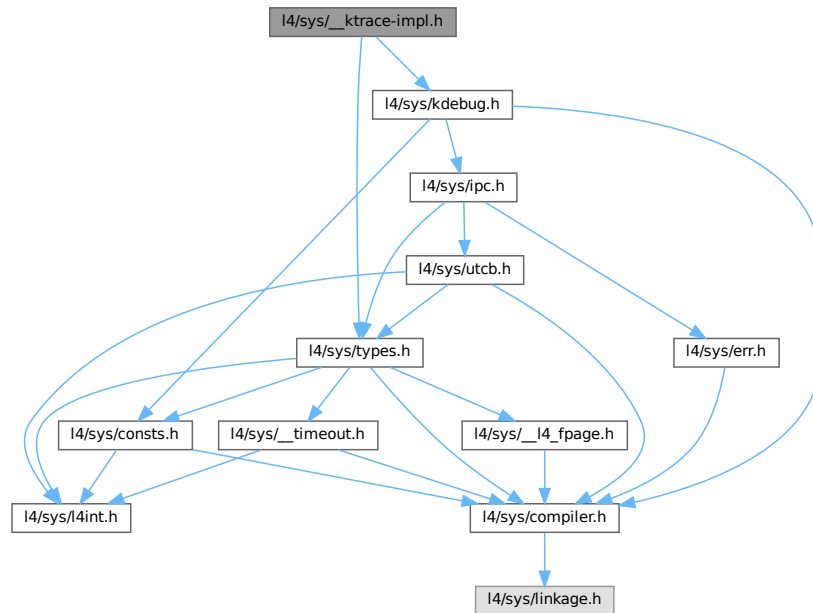

[L4](#) kernel event tracing.

```

#include <l4/sys/types.h>
#include <l4/sys/kdebug.h>

```

Include dependency graph for \_\_ktrace-impl.h:

This graph shows which files directly or indirectly include this file:

## Functions

- [l4\\_umword\\_t fiasco\\_tbuf\\_log](#) (const char \*text)  
Create new trace-buffer entry with describing <text>.
- [l4\\_umword\\_t fiasco\\_tbuf\\_log\\_3val](#) (const char \*text, [l4\\_umword\\_t](#) v1, [l4\\_umword\\_t](#) v2, [l4\\_umword\\_t](#) v3)  
Create new trace-buffer entry with describing <text> and three additional values.
- void **fiasco\_tbuf\_clear** (void)  
Clear trace-buffer.
- void **fiasco\_tbuf\_dump** (void)  
Dump trace-buffer to kernel console.
- [l4\\_umword\\_t fiasco\\_tbuf\\_log\\_binary](#) (const unsigned char \*data)  
Create new trace-buffer entry with binary data.

 l4_umword_t * out3,
 l4_umword_t client_id) [inline]
```

C interface for calling the ARM secure monitor, see [L4::Arm\\_smccc::call\(\)](#) for the C++ interface.

## Parameters

|  |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <i>pfc</i>  | Capability of the SMC kernel object. The input parameters consist of a function identifier, 6 arguments and a client id. Results are returned in 4 output parameters.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|  | <i>func</i> | Function identifier. <ul style="list-style-type: none"> <li>• Bit 31 has to be set: This marks the call as <i>Fast Call</i>. <i>Yielding Calls</i> (bit 31 unset) are rejected by the kernel.</li> <li>• Bit 30 defines the calling convention:</li> <li>• Bit 30 == 1: 64-bit calling convention.</li> <li>• Bit 30 == 0: 32-bit calling convention.</li> <li>• Bits 24..29 determine the service call ID. The permitted IDs are set in the kernel configuration. By default only service IDs &gt;= 0x30000000 (<i>Trusted Application Calls</i> and <i>Trusted OS Calls</i>) are allowed.</li> </ul> |

|     |                  |                                                                                              |
|-----|------------------|----------------------------------------------------------------------------------------------|
| in  | <i>in0</i>       | First input parameter.                                                                       |
| in  | <i>in1</i>       | Second input parameter.                                                                      |
| in  | <i>in2</i>       | Third input parameter.                                                                       |
| in  | <i>in3</i>       | Fourth input parameter.                                                                      |
| in  | <i>in4</i>       | Fifth input parameter.                                                                       |
| in  | <i>in5</i>       | Sixth input parameter.                                                                       |
| out | <i>out0</i>      | First output parameter.                                                                      |
| out | <i>out1</i>      | Second output parameter.                                                                     |
| out | <i>out2</i>      | Third output parameter.                                                                      |
| out | <i>out3</i>      | Fourth output parameter.                                                                     |
| in  | <i>client_id</i> | Client ID. According to the specification, this value might be ignored by certain functions. |

### Return values

|                         |                                                                                                               |
|-------------------------|---------------------------------------------------------------------------------------------------------------|
| <code>-L4_ENOSYS</code> | Either bit 31 of the function call not set or service ID outside the range permitted by kernel configuration. |
| <code>-L4_EINVAL</code> | Invalid number of parameters.                                                                                 |
| <code>&lt; 0</code>     | Other <a href="#">L4</a> error.                                                                               |
| <code>0</code>          | Success.                                                                                                      |

## 17.456 arm/l4/sys/cache.h File Reference

Cache functions.

```

#include <l4/sys/compiler.h>
#include <l4/sys/syscall_defs.h>

```

Include dependency graph for cache.h:

### Functions

- `int l4_cache_clean_data` (unsigned long start, unsigned long end) `L4_NOTHROW`  
Cache clean a range in D-cache; writes back to PoC.
- `int l4_cache_flush_data` (unsigned long start, unsigned long end) `L4_NOTHROW`  
Cache flush a range; writes back to PoC.
- `int l4_cache_inv_data` (unsigned long start, unsigned long end) `L4_NOTHROW`  
Cache invalidate a range; might write back to PoC.
- `int l4_cache_coherent` (unsigned long start, unsigned long end) `L4_NOTHROW`  
Make memory coherent between I-cache and D-cache; writes back to PoU.
- `int l4_cache_dma_coherent` (unsigned long start, unsigned long end) `L4_NOTHROW`  
Make memory coherent for use with external memory; writes back to PoC.
- `int l4_cache_dma_coherent_full` (void) `L4_NOTHROW`  
Make memory coherent for use with external memory; writes back to PoC.

### 17.464.1 Detailed Description

[L4::Cap](#) related definitions.

#### Author

Alexander Warg [alexander.warg@os.inf.tu-dresden.de](mailto:alexander.warg@os.inf.tu-dresden.de)

Definition in file [capability](#).

### 17.464.2 Macro Definition Documentation

#### 17.464.2.1 L4\_DISABLE\_COPY

```
#define L4_DISABLE_COPY(
 _class)
```

#### Value:

```
public:
 _class(_class const &) = delete; \
 _class operator = (_class const &) = delete; \
private:
```

Disable copy of a class.

#### Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>_class</code> | Name of the class that shall not have value copy semantics. |
|---------------------|-------------------------------------------------------------|

The typical use of this is:

```
class Non_value
{
 L4_DISABLE_COPY(Non_value)

 ...
}
```

Definition at line 52 of file [capability](#).

## Enumerations

- `enum`  
*Defaults for local thread priorities.*

### 17.474.1 Detailed Description

Constants.

Definition in file [consts.h](#).

### 17.474.2 Enumeration Type Documentation

#### 17.474.2.1 anonymous enum

anonymous enum

Defaults for local thread priorities.

Priorities are to be seen as local. These are used by the loader and libpthread. They are to be understood as 'local', which means the actual priority of the thread (as seen by the kernel) is the base priority as defined by the scheduler plus the local priority.

## Functions

- [l4\\_addr\\_t l4\\_trunc\\_page](#) ([l4\\_addr\\_t](#) address) [L4\\_NOTHROW](#)  
*Round an address down to the next lower page boundary.*
- [l4\\_addr\\_t l4\\_trunc\\_size](#) ([l4\\_addr\\_t](#) address, unsigned char bits) [L4\\_NOTHROW](#)  
*Round an address down to the next lower flexpage with size bits.*
- [l4\\_addr\\_t l4\\_round\\_page](#) ([l4\\_addr\\_t](#) address) [L4\\_NOTHROW](#)  
*Round address up to the next page.*
- [l4\\_addr\\_t l4\\_round\\_size](#) ([l4\\_addr\\_t](#) value, unsigned char bits) [L4\\_NOTHROW](#)  
*Round value up to the next alignment with bits size.*
- unsigned [l4\\_bytes\\_to\\_mwords](#) (unsigned size) [L4\\_NOTHROW](#)  
*Determine how many machine words ([l4\\_umword\\_t](#)) are required to store a buffer of 'size' bytes.*

## 17.476.1 Detailed Description

## 17.486.1 Macro Definition Documentation

### 17.486.1.1 L4\_RPC\_DEF

```
#define L4_RPC_DEF(
 name)
```

#### Value:

```
template struct L4::Ipcc::Msg::Rpc_call \
 <name##_t, name##_t::class_type, name##_t::ipc_type, name##_t::flags_type>
```

Generate the definition of an RPC stub.

#### Parameters

|             |                                                                                            |
|-------------|--------------------------------------------------------------------------------------------|
| <i>name</i> | The fully qualified method name to be implemented, this means <code>class::method</code> . |
|-------------|--------------------------------------------------------------------------------------------|

This macro generates the definition (implementation) for the given RPC interface method.

Definition at line 32 of file [ipc\\_client](#).

This graph shows which files directly or indirectly include this file:

### Data Structures

- struct [L4::ipc::Call](#)

- RPC attribute for a standard RPC call.*
  - struct [L4::ipc::Call\\_zero\\_send\\_timeout](#)
*RPC attribute for an RPC call, with zero send timeout.*
  - struct [L4::ipc::Call\\_t< RIGHTS >](#)
*RPC attribute for an RPC call with required rights.*
  - struct [L4::ipc::Send\\_only](#)
*RPC attribute for a send-only RPC.*

## Namespaces

- namespace [L4](#)
  - [L4](#) low-level kernel interface.
- namespace [L4::ipc](#)
  - IPC related functionality.
- namespace [L4::ipc::Msg](#)
  - IPC Message related functionality.

## Macros

- #define [L4\\_INLINE\\_RPC\\_NF](#)(res, name, args...)
  - Define an inline RPC call type (the type only, no callable).
- #define [L4\\_INLINE\\_RPC\\_NF\\_OP](#)(op, res, name, args...)
  - Define an inline RPC call type with specific opcode (the type only, no callable).
- #define [L4\\_INLINE\\_RPC](#)(res, name, args, attr...)
  - Define an inline RPC call (type and callable).
- #define [L4\\_INLINE\\_RPC\\_OP](#)(op, res, name, args, attr...)
  - Define an inline RPC call with specific opcode (type and callable).
- #define [L4\\_RPC\\_NF](#)(res, name, args...)
  - Define an RPC call type (the type only, no callable).
- #define [L4\\_RPC\\_NF\\_OP](#)(op, res, name, args...)
  - Define an RPC call type with specific opcode (the type only, no callable).
- #define [L4\\_RPC](#)(res, name, args, attr...)
  - Define an RPC call (type and callable).
- #define [L4\\_RPC\\_OP](#)(op, res, name, args, attr...)
  - Define an RPC call with specific opcode (type and callable).

## 17.489.2 Macro Definition Documentation

### 17.489.2.1 L4\_INLINE\_RPC

```
#define L4_INLINE_RPC(
 res,
 name,
 args,
 attr...)
```

#### Value:

`res name args`

Define an inline RPC call (type and callable).

#### Parameters

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                            |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

#### Examples

[examples/clntsrv/src/shared.h](#).

Definition at line 482 of file [ipc\\_iface](#).

Referenced by [L4Re::Mem\\_alloc::info\(\)](#).

### 17.489.2.2 L4\_INLINE\_RPC\_NF

```
#define L4_INLINE_RPC_NF(
 res,
 name,
 args...)
```

#### Value:

```
struct name##_t : L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> \
{ \
 typedef L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> type; \
 L4_INLINE_RPC_SRV_FORWARD(name); \
}
```

Define an inline RPC call type (the type only, no callable).

#### Parameters

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                                                              |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 453 of file [ipc\\_iface](#).

**17.489.2.3 L4\_INLINE\_RPC\_NF\_OP**

```
#define L4_INLINE_RPC_NF_OP (
 op,
 res,
 name,
 args...)

```

**Value:**

```
struct name##_t : L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> \
{ \
 typedef L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> type; \
 enum { Opcode = (op) }; \
 L4_INLINE_RPC_SRV_FORWARD(name); \
}

```

Define an inline RPC call type with specific opcode (the type only, no callable).

**Parameters**

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                                                                |
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                                                    |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 466 of file [ipc\\_iface](#).

**17.489.2.4 L4\_INLINE\_RPC\_OP**

```
#define L4_INLINE_RPC_OP (
 op,
 res,
 name,
 args,
 attr...)

```

**Value:**

```
res name args
```

Define an inline RPC call with specific opcode (type and callable).

**Parameters**

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                              |
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                  |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Definition at line 497 of file [ipc\\_iface](#).

### 17.489.2.5 L4\_RPC

```
#define L4_RPC(
 res,
 name,
 args,
 attr...)

```

#### Value:

res name args

Define an RPC call (type and callable).

#### Parameters

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                            |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Definition at line 541 of file [ipc\\_iface](#).

Referenced by [L4Re::Dataspace::info\(\)](#).

### 17.489.2.6 L4\_RPC\_NF

```
#define L4_RPC_NF(
 res,
 name,
 args...)

```

#### Value:

```
struct name##_t : L4::Ipc::Msg::Rpc_call<name##_t, Class, res args>
{
 typedef L4::Ipc::Msg::Rpc_call<name##_t, Class, res args> type;
 L4_INLINE_RPC_SRV_FORWARD(name);
}

```

Define an RPC call type (the type only, no callable).

#### Parameters

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                                                              |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Definition at line 510 of file [ipc\\_iface](#).

Referenced by [L4Re::Dataspace::info\(\)](#).

**17.489.2.7 L4\_RPC\_NF\_OP**

```
#define L4_RPC_NF_OP (
 op,
 res,
 name,
 args...)

```

**Value:**

```
struct name##_t : L4::Ipc::Msg::Rpc_call<name##_t, Class, res args>
{
 typedef L4::Ipc::Msg::Rpc_call<name##_t, Class, res args> type;
 enum { Opcode = (op) };
 L4_INLINE_RPC_SRV_FORWARD(name);
}

```

```
\\
\\
\\
\\

```

Define an RPC call type with specific opcode (the type only, no callable).

**Parameters**

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                                                                |
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                                                    |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Definition at line 525 of file [ipc\\_iface](#).

**17.489.2.8 L4\_RPC\_OP**

```
#define L4_RPC_OP (
 op,
 res,
 name,
 args,
 attr...)

```

**Value:**

```
res name args
```

Define an RPC call with specific opcode (type and callable).

**Parameters**

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                              |
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                  |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

## 17.493 I4/cxx/ipc\_server File Reference

IPC server loop.

Include dependency graph for ipc\_server:

- class `L4::Server_object`  
*Abstract server object to be used with `L4::Server` and `L4::Basic_registry`.*
- struct `L4::Server_object_t< IFACE, BASE >`  
*Base class (template) for server implementing server objects.*
- struct `L4::Server_object_x< Derived, IFACE, BASE >`  
*Helper class to implement `p_dispatch` based server objects.*
- struct `L4::Irq_handler_object`  
*`Server` object base class for handling IRQ messages.*

- namespace L4  
*L4 low-level kernel interface.*

Definition in file [ipc\\_server](#).

## 17.498 I4/sys/cxx/ipc\_types File Reference

```
#include "capability.h"
#include "types"
#include "ipc_basics"
Include dependency graph for ipc_types:
```

This graph shows which files directly or indirectly include this file:

### Data Structures

- struct [L4::lpc::In\\_out< T >](#)  
Mark an argument as in-out argument.
- struct [L4::lpc::As\\_value< T >](#)  
Pass the argument as plain data value.
- struct [L4::lpc::Opt< T >](#)  
Attribute for defining an optional RPC argument.

- class [L4::lpc::Small\\_buf](#)  
*A receive item for receiving a single object capability.*
- class [L4::lpc::Gen\\_fpage](#)  
*Generic RPC base for typed message items.*
- class [L4::lpc::Snd\\_fpage](#)  
*Send item or return item.*
- class [L4::lpc::Rcv\\_fpage](#)  
*Non-small receive item.*
- class [L4::lpc::Cap< T >](#)  
*Capability type for RPC interfaces (see [L4::Cap< T >](#)).*

## Namespaces

- namespace [L4](#)  
*L4 low-level kernel interface.*
- namespace [L4::lpc](#)  
*IPC related functionality.*
- namespace [L4::lpc::Msg](#)  
*IPC Message related functionality.*

## Functions

- `template<typename T>`  
`Cap< T > L4::lpc::make_cap (L4::Cap< T > cap, unsigned rights) noexcept`  
*Make an [L4::lpc::Cap< T >](#) for the given capability and rights.*
- `template<typename T>`  
`Cap< T > L4::lpc::make_cap_rw (L4::Cap< T > cap) noexcept`  
*Make an [L4::lpc::Cap< T >](#) for the given capability with [L4\\_CAP\\_FPAGE\\_RW](#) rights.*
- `template<typename T>`  
`Cap< T > L4::lpc::make_cap_rws (L4::Cap< T > cap) noexcept`  
*Make an [L4::lpc::Cap< T >](#) for the given capability with [L4\\_CAP\\_FPAGE\\_RWS](#) rights.*
- `template<typename T>`  
`Cap< T > L4::lpc::make_cap_full (L4::Cap< T > cap) noexcept`  
*Make an [L4::lpc::Cap< T >](#) for the given capability with full fpage and object-specific rights.*

## Macros

- `#define L4_TYPES_FLAGS_OPS_DEF(T)`  
*Helper macro to define a set of bitwise operators on an enum type.*

### 17.503.1 Macro Definition Documentation

#### 17.503.1.1 L4\_TYPES\_FLAGS\_OPS\_DEF

```
#define L4_TYPES_FLAGS_OPS_DEF(
 T)
```

#### Value:

```
friend constexpr T operator ~ (T f)
{
 return T(~static_cast<typename L4::Types::Int_for_type<T>::type>(f));
}

friend constexpr T operator | (T l, T r)
{
 return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)
 | static_cast<typename L4::Types::Int_for_type<T>::type>(r));
}

friend constexpr T operator & (T l, T r)
{
 return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)
 & static_cast<typename L4::Types::Int_for_type<T>::type>(r));
}
```

Helper macro to define a set of bitwise operators on an enum type.

This allows to use the enum type as bitmask type with '&', '|', and '~' operators that keep the enum type as result.

Definition at line 195 of file [types](#).

*Error codes in the error TCR.*

## Functions

- `l4_umword_t l4_ipc_error(l4_msgtag_t tag, l4_utcb_t *utcb) L4_NOTHROW`  
*Get the IPC error code for an IPC operation.*
- `long l4_error(l4_msgtag_t tag) L4_NOTHROW`  
*Get IPC error code if any or message tag label otherwise for an IPC call.*
- `int l4_ipc_is_snd_error(l4_utcb_t *utcb) L4_NOTHROW`  
*Returns whether an error occurred in send phase of an invocation.*

- `int l4_ipc_is_rcv_error (l4_utcb_t *utcb) L4_NOTHROW`  
*Returns whether an error occurred in receive phase of an invocation.*
- `int l4_ipc_error_code (l4_utcb_t *utcb) L4_NOTHROW`  
*Get the error condition of the last invocation from the TCR.*
- `long l4_ipc_to_errno (unsigned long ipc_error_code) L4_NOTHROW`  
*Get a negative error code for the given IPC error code.*
- `l4_msgtag_t l4_ipc_send (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`  
*Send a message to an object (do **not** wait for a reply).*
- `l4_msgtag_t l4_ipc_wait (l4_utcb_t *utcb, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
*Wait for an incoming message from any possible sender.*
- `l4_msgtag_t l4_ipc_receive (l4_cap_idx_t object, l4_utcb_t *utcb, l4_timeout_t timeout) L4_NOTHROW`  
*Wait for a message from a specific source.*
- `l4_msgtag_t l4_ipc_call (l4_cap_idx_t object, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`  
*Object call (usual invocation).*
- `l4_msgtag_t l4_ipc_reply_and_wait (l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
*Reply and wait operation (uses the reply capability).*
- `l4_msgtag_t l4_ipc_send_and_wait (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
*Send a message and do an open wait.*
- `l4_msgtag_t l4_ipc (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_umword_t flags, l4_umword_t slabel, l4_msgtag_t tag, l4_umword_t *rlabel, l4_timeout_t timeout) L4_NOTHROW`  
*Generic L4 object invocation.*
- `l4_msgtag_t l4_ipc_sleep (l4_timeout_t timeout) L4_NOTHROW`  
*Sleep for an amount of time.*
- `l4_msgtag_t l4_ipc_sleep_ms (l4_uint32_t ms) L4_NOTHROW`  
*Sleep for a certain amount of milliseconds.*
- `l4_msgtag_t l4_ipc_sleep_us (l4_uint64_t us) L4_NOTHROW`  
*Sleep for a certain amount of microseconds.*
- `int l4_sndfpage_add (l4_fpage_t const snd_fpage, unsigned long snd_base, l4_msgtag_t *tag) L4_NOTHROW`  
*Add a flexpage to be sent to the UTCB.*

## 17.525.1 Detailed Description

Common IPC interface.

Definition in file [ipc.h](#).

## 17.525.2 Function Documentation

### 17.525.2.1 l4\_ipc\_to\_errno()

```
long l4_ipc_to_errno (
 unsigned long ipc_error_code) [inline]
```

Get a negative error code for the given IPC error code.

#### Parameters

---

|                       |                                                                                                               |
|-----------------------|---------------------------------------------------------------------------------------------------------------|
| <i>ipc_error_code</i> | IPC error code as delivered by the kernel. (or returned by the <a href="#">l4_ipc_error_code()</a> function). |
|-----------------------|---------------------------------------------------------------------------------------------------------------|

## Returns

negative error code in the range of [L4\\_EIPC\\_LO](#) to [L4\\_EIPC\\_HI](#).

Definition at line 561 of file [ipc.h](#).

References [L4\\_EIPC\\_LO](#), [L4\\_INLINE](#), and [L4\\_NOTHROW](#).

### 17.531.1 Detailed Description

The C IPC gate interface, see [L4::ipc\\_gate](#) for the C++ interface.

IPC gates are used to create secure communication channels between protection domains. An IPC gate can be created using the [Factory](#) interface.

Depending on the permissions of the capability used, an IPC gate forwards IPC to the [Thread](#) the IPC gate is *bound* to (cf. [l4\\_rcv\\_ep\\_bind\\_thread\(\)](#) and [l4\\_rcv\\_ep\\_bind\\_snd\\_destination\(\)](#)). If the capability has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, only IPC using a protocol different from the [L4\\_PROTO\\_KOBJECT](#) protocol is forwarded. Without the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, all IPC is forwarded. The latter is the usual case for a client in a client/server scenario. When not bound to a thread or thread group yet, the forwarded IPC blocks until the IPC gate is bound to a thread or thread group, or the IPC times out.

Forwarded IPC is always forwarded to the userland of the thread the IPC gate is bound to, either directly or indirectly using a thread group. That means, the [Thread](#) interface of that thread is not accessible via an IPC gate. The [IPC-Gate API](#) of an IPC gate is only accessible if the capability used has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission (cf. previous paragraph). Conversely that means, if the capability used lacks the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, [IPC-Gate API](#) calls are forwarded to the thread or thread group the IPC gate is bound to instead of being processed by the IPC gate itself. In a client/server scenario, a client should only get IPC gate capabilities without [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission so the client cannot tamper with the IPC gate.

When binding an IPC gate to a thread or thread group, a user-defined, kernel protected, machine-word sized payload called the IPC gate's *label* is assigned to the IPC gate (note that the two least significant bits of the label must be zero; cf. [l4\\_rcv\\_ep\\_bind\\_thread\(\)](#) and [l4\\_rcv\\_ep\\_bind\\_snd\\_destination\(\)](#)). When a send-only IPC or call IPC is forwarded via an IPC gate, the label provided by the sender is ignored and replaced by the IPC gate's label where the two least significant bits are set to the [L4\\_CAP\\_FPAGE\\_S](#) and [L4\\_CAP\\_FPAGE\\_W](#) permissions of the capability used. The replaced label is only visible to the thread the IPC gate is bound to upon receive (or to the selected thread from the thread group the IPC gate is bound to). However, the configured label of an IPC gate can also be queried via [l4\\_ipc\\_gate\\_get\\_infos\(\)](#) if the capability used has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission.

When deleting an IPC gate or when unbinding it from a thread or thread group, the label of IPC already in flight won't be changed. To ensure that no IPC from this IPC gate is received by a thread with an unexpected label, [l4\\_thread\\_modify\\_sender\\_start\(\)](#) shall be used to change the labels of every pending IPC to that gate. This is also required if the label of an already bound IPC gate is changed. It is not necessary after binding the IPC gate to a thread or thread group for the first time.

When binding a currently bound IPC gate to a new thread or thread group, the same label should be used that was used with the old thread. Otherwise the old and the new thread need to synchronize to avoid IPC messages with unexpected labels.

## Include File

```
#include <l4/sys/ipc_gate.h>
```

For the C++ interface refer to the [L4::ipc\\_gate](#) documentation.

- void `outhex8` (`l4_uint8_t` number)
- Output an 8-bit unsigned hexadecimal number via the kernel debugger.*
- void `outdec` (`l4_mword_t` number)
- Output a decimal unsigned machine word via the kernel debugger.*

### 17.535.1 Detailed Description

Functionality for invoking the kernel debugger.

Definition in file [kdebug.h](#).

### 17.535.2 Enumeration Type Documentation

#### 17.535.2.1 `l4_kdebug_ops_t`

enum `l4_kdebug_ops_t`

Op-codes for operations that can be invoked on the base debugger capability.

See also [\\_\\_ktrace-impl.h](#) for additional op-codes.

Definition at line 44 of file [kdebug.h](#).

### 17.535.3 Function Documentation

#### 17.535.3.1 `__kdebug_3_text()`

```
l4_msgtag_t __kdebug_3_text (
 unsigned op,
 char const * text,
 unsigned len,
 l4_umword_t v1,
 l4_umword_t v2,
 l4_umword_t v3) [inline]
```

Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.

#### Parameters

---

|             |                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | Text output operation code from <a href="#">l4_kdebug_ops_t</a> or a value above 0x200 used by the kernel trace buffer implementation ( <a href="#">__ktrace-impl.h</a> ).        |
| <i>text</i> | Output string.                                                                                                                                                                    |
| <i>len</i>  | Length of the output string. The maximum length is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 5 machine words. Output strings longer than this limit will be cropped. |
| <i>v1</i>   | First machine word argument.                                                                                                                                                      |
| <i>v2</i>   | Second machine word argument.                                                                                                                                                     |
| <i>v3</i>   | Third machine word argument.                                                                                                                                                      |

### Return values

|                |                                                            |
|----------------|------------------------------------------------------------|
| <i>Message</i> | tag returned from the IPC on the base debugger capability. |
|----------------|------------------------------------------------------------|

17.535.3.4 `__kdebug_text()`

```
l4_msgtag_t __kdebug_text (
 unsigned op,
 char const * text,
 unsigned len) [inline]
```

Invoke a text output operation on the base debugger capability.

**Parameters**

|             |                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | Text output operation code from <a href="#">l4_kdebug_ops_t</a> or a value above 0x200 used by the kernel trace buffer implementation ( <a href="#">__ktrace-impl.h</a> ).        |
| <i>text</i> | Output string.                                                                                                                                                                    |
| <i>len</i>  | Length of the output string. The maximum length is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 2 machine words. Output strings longer than this limit will be cropped. |

**Return values**

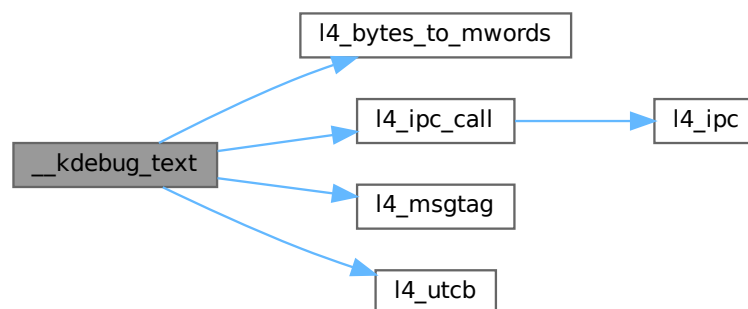

|                |                                                            |

Here is the caller graph for this function:

### 17.535.3.5 enter\_kdebug()

```
void enter_kdebug (
 char const * text) [inline]
```

Enter the kernel debugger.

#### Parameters

|             |                                                                 |
|-------------|-----------------------------------------------------------------|
| <i>text</i> | Optional message displayed by the kernel debugger when entered. |
|-------------|-----------------------------------------------------------------|

Enter the kernel debugger, if configured. An optional message can be passed to the kernel debugger which is printed upon the entering of the debugger.

#### Examples

[examples/sys/singlestep/main.c](#).

Definition at line 204 of file [kdebug.h](#).

References [\\_\\_kdebug\\_text\(\)](#), [L4\\_BASE\\_DEBUGGER\\_CAP](#), [L4\\_INLINE](#), [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_NOTHROW](#), and [L4\\_PROTO\\_DEBUGGER](#).

Here is the call graph for this function:

### 17.535.3.6 outchar()

```
void outchar (
 char c) [inline]
```

Output a single character via the kernel debugger.

#### Parameters

|          |                   |
|----------|-------------------|
| <i>c</i> | Output character. |
|----------|-------------------|

Definition at line 245 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.7 outdec()

```
void outdec (
 l4_mword_t number) [inline]
```

Output a decimal unsigned machine word via the kernel debugger.

#### Parameters

|               |                      |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

Definition at line 334 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.8 outhex12()

```
void outhex12 (
 14_uint16_t number) [inline]
```

Output a 12-bit unsigned hexadecimal number via the kernel debugger.

#### Parameters

|               |                                                      |
|---------------|------------------------------------------------------|
| <i>number</i> | Output 12-bit number. Only the 12 LSB bits are used. |
|---------------|------------------------------------------------------|

Definition at line 314 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.9 outhex16()

```
void outhex16 (
 14_uint16_t number) [inline]
```

Output a 16-bit unsigned hexadecimal number via the kernel debugger.

#### Parameters

---

|               |                       |
|---------------|-----------------------|
| <i>number</i> | Output 16-bit number. |
|---------------|-----------------------|

Definition at line 304 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.10 outhex20()

```
void outhex20 (
 l4_uint32_t number) [inline]
```

Output a 20-bit unsigned hexadecimal number via the kernel debugger.

#### Parameters

|               |                                                      |
|---------------|------------------------------------------------------|
| <i>number</i> | Output 20-bit number. Only the 20 LSB bits are used. |
|---------------|------------------------------------------------------|

Definition at line 294 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

**17.535.3.11 outhex32()**

```
void outhex32 (
 14_uint32_t number) [inline]
```

Output a 32-bit unsigned hexadecimal number via the kernel debugger.

**Parameters**

---

|               |                       |
|---------------|-----------------------|
| <i>number</i> | Output 32-bit number. |
|---------------|-----------------------|

Definition at line 284 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.12 outhex64()

```
void outhex64 (
 l4_uint64_t number) [inline]
```

Output a 64-bit unsigned hexadecimal number via the kernel debugger.

#### Parameters

|               |                       |
|---------------|-----------------------|
| <i>number</i> | Output 64-bit number. |
|---------------|-----------------------|

The two 32-bit halves are printed non-atomically.

Definition at line 273 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.13 outhex8()

```
void outhex8 (
 l4_uint8_t number) [inline]
```

Output an 8-bit unsigned hexadecimal number via the kernel debugger.

#### Parameters

|               |                      |
|---------------|----------------------|
| <i>number</i> | Output 8-bit number. |
|---------------|----------------------|

Definition at line 324 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

Here is the call graph for this function:

### 17.535.3.14 outnstring()

```
void outnstring (
 char const * text,
 unsigned len) [inline]
```

Output a fixed-length string via the kernel debugger.

#### Parameters

|             |                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>text</i> | Beginning of the output string.                                                                                                                                                   |
| <i>len</i>  | Length of the output string. The maximum length is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 2 machine words. Output strings longer than this limit will be cropped. |

Definition at line 226 of file [kdebug.h](#).

Here is the caller graph for this function:

### 17.535.3.15 outstring()

```
void outstring (
 char const * text) [inline]
```

Output a string via the kernel debugger.

#### Parameters

|             |                                                                                                                                                                                                           |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>text</i> | Beginning of the output string. The maximum length of the output string is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 2 machine words. Output strings longer than this limit will be cropped. |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 237 of file [kdebug.h](#).

References [L4\\_INLINE](#), and [outnstring\(\)](#).

Here is the call graph for this function:

### 17.535.3.16 outumword()

```
void outumword (
 l4_umword_t number) [inline]
```

Output a hexadecimal unsigned machine word via the kernel debugger.

#### Parameters

|               |                      |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

If the machine word is 64 bits long, it is printed non-atomically as two 32-bit numbers.

Definition at line 258 of file [kdebug.h](#).

References [\\_\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

## 17.544 l4/sys/ktrace.h File Reference

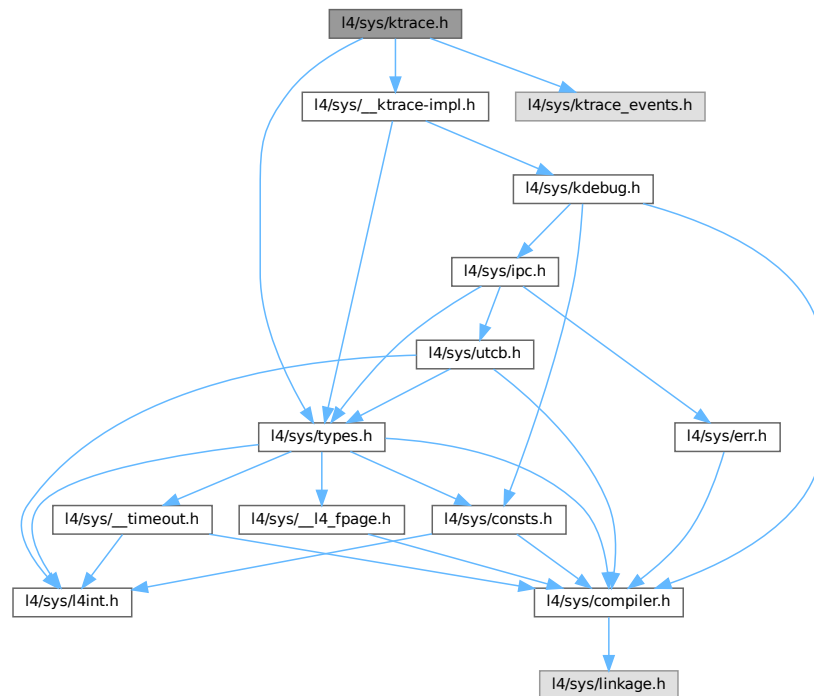

[L4](#) kernel event tracing.

```

#include <l4/sys/types.h>
#include <l4/sys/ktrace_events.h>
#include <l4/sys/__ktrace-impl.h>

```

Include dependency graph for `ktrace.h`:

## Functions

- `l4_umword_t fiasco_tbuf_log` (const char \*text)  
Create new trace-buffer entry with describing <text>.
- `l4_umword_t fiasco_tbuf_log_3val` (const char \*text, `l4_umword_t` v1, `l4_umword_t` v2, `l4_umword_t` v3)  
Create new trace-buffer entry with describing <text> and three additional values.
- `l4_umword_t fiasco_tbuf_log_binary` (const unsigned char \*data)  
Create new trace-buffer entry with binary data.
- void `fiasco_tbuf_clear` (void)  
Clear trace-buffer.
- void `fiasco_tbuf_dump` (void)  
Dump trace-buffer to kernel console.

*Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.*

### 17.561.1 Detailed Description

Debugger related functions.

#### Attention

This API is subject to change!

Definition in file [obj\\_info.h](#).

### 17.561.2 Function Documentation

#### 17.561.2.1 l4\_debugger\_query\_obj\_infos()

```
l4_msgtag_t l4_debugger_query_obj_infos (
 l4_cap_idx_t cap,
 l4_addr_t ku_mem_addr,
 l4_size_t ku_mem_size,
 l4_umword_t skip,
 l4_umword_t * result_cnt,
 l4_umword_t * result_all) [inline]
```

Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.

#### Parameters

|     |                    |                                                       |
|-----|--------------------|-------------------------------------------------------|
|     | <i>cap</i>         | Capability of the debugger object.                    |
|     | <i>ku_mem_addr</i> | Address of the KU memory for writing the information. |
|     | <i>ku_mem_size</i> | Size of the KU memory to writing the information.     |
|     | <i>skip</i>        | Number of objects to skip.                            |
| out | <i>result_cnt</i>  | Number of objects in the mapping database.            |
| out | <i>result_all</i>  | Number of objects written to the KU memory.           |

**Note**

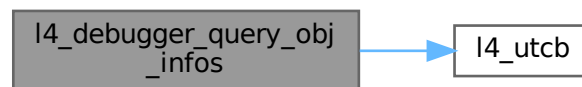

The kernel will only write a number of object information which fits to the passed KU memory. To retrieve missing object information, repeat the call and adapt the `skip` parameter accordingly.

If this system call is performed several times, the number of kernel objects might have changed in the meantime.

## 17.595 l4/sys/thread File Reference

Common thread related definitions.

Include dependency graph for thread:

This graph shows which files directly or indirectly include this file:

## Data Structures

- class L4::Thread

C++ [L4](#) kernel thread interface, see [Thread](#) for the C interface.

- class [L4::Thread::Attr](#)

[Thread](#) attributes used for [control\(\)](#).

- class [L4::Thread::Modify\\_senders](#)

[Class](#) wrapping a list of rules which modify the sender label of IPC messages inbound to this thread.

## Namespaces

- namespace [L4](#)

[L4](#) low-level kernel interface.

## 17.595.1 Detailed Description

*Set terminal attributes to disable all special processing.*

## 17.615.1 Detailed Description

Virtual console interface.

Definition in file [vcon.h](#).

## 17.615.2 Enumeration Type Documentation

### 17.615.2.1 L4\_vcon\_read\_flags

```
enum L4_vcon_read_flags
```

Vcon read flags.

#### Enumerator

|                         |                       |
|-------------------------|-----------------------|
| L4_VCON_READ_SIZE_MASK  | Size mask.            |
| L4_VCON_READ_STAT_BREAK | Break condition flag. |
| L4_VCON_READ_STAT_DONE  | Done condition flag.  |

Definition at line 170 of file [vcon.h](#).

## 17.624.2 Macro Definition Documentation

### 17.624.2.1 l4\_assert

```
#define l4_assert(
 expr)
```

#### Value:

```
l4_assert_fn(!(expr), __FILE__ ":" L4_stringify(__LINE__) ": Assertion \"" \
 L4_stringify(expr) "\" failed.\n")
```

Low-level assert.

#### Parameters

|             |                                              |
|-------------|----------------------------------------------|
| <i>expr</i> | Expression to be evaluate for the assertion. |
|-------------|----------------------------------------------|

This assertion is a low-level implementation that directly uses kernel primitives. Only use `l4_assert()` when the standard `assert()` functionality is not available.

## 17.639.1 Detailed Description

ELF definition.

Date

08/18/2000

Author

Frank Mehnert [fm3@os.inf.tu-dresden.de](mailto:fm3@os.inf.tu-dresden.de) Alexander Warg [aw11@os.inf.tu-dresden.de](mailto:aw11@os.inf.tu-dresden.de)

Many structs from "Executable and Linkable Format (ELF)", Portable Formats Specification, Version 1.1 and "↔ System V Application Binary Interface - DRAFT - April 29, 1998" The Santa Cruz Operation, Inc. (see [http↔://www.sco.com/developer/gabi/contents.html](http://www.sco.com/developer/gabi/contents.html))

Definition in file [elf.h](#).

## 17.645.1 Detailed Description

Kernel Info Page access functions.

Definition in file [kip.h](#).

## 17.645.2 Macro Definition Documentation

### 17.645.2.1 l4\_kip\_for\_each\_feature

```
#define l4_kip_for_each_feature(
 s)
```

**Value:**

```
for (s += __builtin_strlen(s) + 1; *s; s += __builtin_strlen(s) + 1)
```

Cycle through kernel features given in the KIP.

Cycles through all KIP kernel feature strings. *s* must be a character pointer (`char const *`) initialized with [l4\\_kip\\_version\\_string\(\)](#).

Definition at line 272 of file [kip.h](#).

Referenced by [l4\\_kip\\_kernel\\_has\\_feature\(\)](#).

## 17.645.3 Function Documentation

### 17.645.3.1 l4\_kip\_kernel\_has\_feature()

```
int l4_kip_kernel_has_feature (
 l4_kernel_info_t const * kip,
 char const * str) [inline]
```

Check if kernel supports a feature.

**Parameters**

|            |                                        |
|------------|----------------------------------------|
| <i>kip</i> | Pointer to the kernel info page (KIP). |
| <i>str</i> | Feature name to check.                 |

**Returns**

1 if the kernel supports the feature, 0 if not.

Checks the feature field in the KIP for the given string.

Definition at line 286 of file [kip.h](#).

References [l4\\_kip\\_for\\_each\\_feature](#), and [l4\\_kip\\_version\\_string\(\)](#).

#include <l4/sys/kip.h>
#include <l4/sys/compiler.h>
Include dependency graph for kip.h:
```

### Macros

- `#define l4util_kip_for_each_feature(s)`  
Cycle through kernel features given in the KIP.

### Functions

- `L4_BEGIN_DECLS int l4util_kip_kernel_has_feature (l4_kernel_info_t const *k, char const *str)`  
Check if kernel supports a feature.
- `unsigned long l4util_kip_kernel_abi_version (l4_kernel_info_t const *k)`  
Return kernel ABI version.

### 17.653.1 Detailed Description

Simple list-based allocator.

Taken from the Fiasco kernel.

#### Date

Alexander Warg <aw11os.inf.tu-dresden.de> Frank Mehnert [fm3@os.inf.tu-dresden.de](mailto:fm3@os.inf.tu-dresden.de)

Definition in file [list\\_alloc.h](#).

## 17.653.2 Function Documentation

### 17.653.2.1 l4la\_alloc()

```
void * l4la_alloc (
 l4la_free_t ** first,
 l4_size_t size,
 unsigned align)
```

Allocate memory from pool.

#### Parameters

|              |                                    |
|--------------|------------------------------------|
| <i>first</i> | list identifier                    |
| <i>size</i>  | length of memory block to allocate |
| <i>align</i> | alignment                          |

References [L4\\_CV](#).

### 17.653.2.2 l4la\_avail()

```
l4_size_t l4la_avail (
 l4la_free_t ** first)
```

Show available memory in pool.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#), and [L4\\_END\\_DECLS](#).

### 17.653.2.3 l4la\_dump()

```
void l4la_dump (
 l4la_free_t ** first)
```

Show all list members.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#).

### 17.653.2.4 l4la\_free()

```
L4_BEGIN_DECLS void l4la_free (
 l4la_free_t ** first,
 void * block,
 l4_size_t size)
```

Add free memory to memory pool.

#### Parameters

---

|              |                                |
|--------------|--------------------------------|
| <i>first</i> | list identifier                |
| <i>block</i> | address of unused memory block |
| <i>size</i>  | size of memory block           |

References [L4\\_CV](#).

### 17.653.2.5 l4la\_init()

```
void l4la_init (
 l4la_free_t ** first)
```

Init memory pool.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#).

*Flags to be set in the 'flags' parameter above.*
- #define **L4UTIL\_MB\_BOOTDEV** 0x00000002  
*is there a boot device set?*
- #define **L4UTIL\_MB\_CMDLINE** 0x00000004  
*is the command-line defined?*
- #define **L4UTIL\_MB\_MODS** 0x00000008  
*are there modules to do something with?*
- #define **L4UTIL\_MB\_AOUT\_SYMS** 0x00000010  
*is there a symbol table loaded?*
- #define **L4UTIL\_MB\_ELF\_SHDR** 0x00000020  
*is there an ELF section header table?*
- #define **L4UTIL\_MB\_MEM\_MAP** 0x00000040  
*is there a full memory map?*
- #define **L4UTIL\_MB\_DRIVE\_INFO** 0x00000080  
*Is there drive info?*
- #define **L4UTIL\_MB\_CONFIG\_TABLE** 0x00000100  
*Is there a config table?*
- #define **L4UTIL\_MB\_BOOT\_LOADER\_NAME** 0x00000200  
*Is there a boot loader name?*
- #define **L4UTIL\_MB\_APM\_TABLE** 0x00000400  
*Is there a APM table?*
- #define **L4UTIL\_MB\_VIDEO\_INFO** 0x00000800  
*Is there video information?*
- #define **L4UTIL\_MB\_VALID** 0x2BADB002UL  
*If we are multiboot-compliant, this value is present in the eax register.*

### 17.657.1 Detailed Description

Multiboot info structure as defined by GRUB.

Definition in file [mb\\_info.h](#).

### 17.657.2 Macro Definition Documentation

#### 17.657.2.1 l4util\_mb\_for\_each\_mmap\_entry

```
#define l4util_mb_for_each_mmap_entry(
 i,
 mbi)
```

**Value:**

```
for (i = l4util_mb_first_mmap_entry(mbi);
 (unsigned long)i < (unsigned long)mbi->mmap_addr + mbi->mmap_length;
 i = l4util_mb_next_mmap_entry(i))
```

Iterate over a memory map provided in a Multiboot info.

#### Parameters

|            |                                                                                                                                               |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <i>i</i>   | Name of a variable of type <a href="#">l4util_mb_addr_range_t</a> * that is consecutively assigned pointers to the entries of the memory map. |
| <i>mbi</i> | Pointer to the <a href="#">l4util_mb_info_t</a> where the memory map can be found.                                                            |

Definition at line 332 of file [mb\\_info.h](#).

#### 17.657.2.2 L4UTIL\_MB\_MEMORY

```
#define L4UTIL_MB_MEMORY 0x00000001
```

Flags to be set in the 'flags' parameter above.

is there basic lower/upper memory information?

Definition at line 344 of file [mb\\_info.h](#).

#### 17.657.2.3 MB\_ART\_MEMORY

```
#define MB_ART_MEMORY 1
```

Address Range Types (ART) from "Advanced Configuration and Power Interface Specification" Rev3.0a (p.

390). Other values are undefined. available, usable RAM

Definition at line 64 of file [mb\\_info.h](#).

## 17.672 l4/util/thread.h File Reference

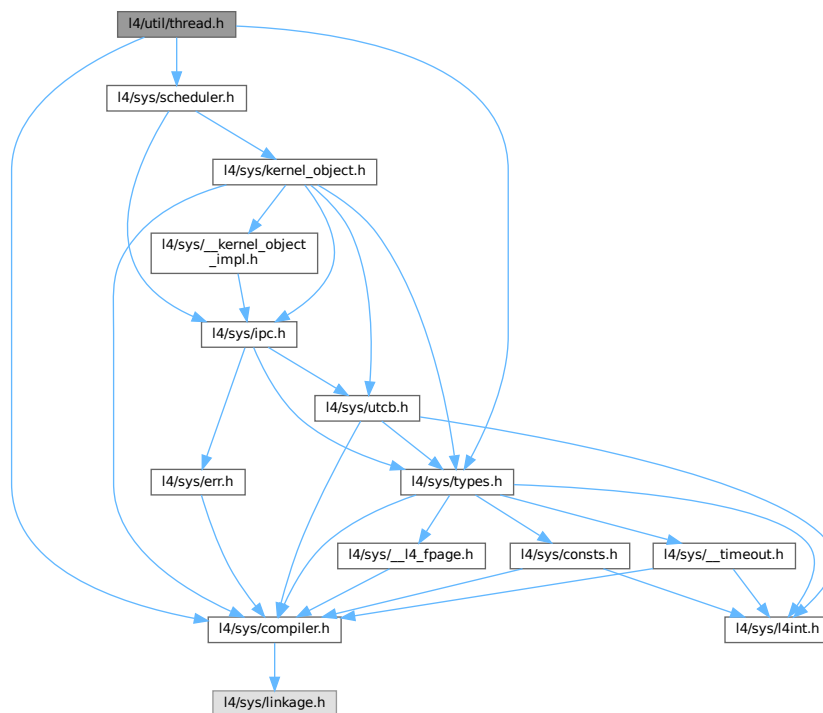

Low-level Thread Functions.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/scheduler.h>

```

Include dependency graph for thread.h:

### Macros

- `#define __L4UTIL_THREAD_FUNC(name)`  
*Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.*

## 17.672.1 Detailed Description

Low-level Thread Functions.

Date

1997

Author

Sebastian Schönberg

Definition in file [thread.h](#).

## 17.672.2 Macro Definition Documentation

### 17.672.2.1 \_\_L4UTIL\_THREAD\_FUNC

```
#define __L4UTIL_THREAD_FUNC(
 name)
```

**Value:**

```
void L4_NORETURN name(void)
```

Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

Use this as a function header when starting a low-level thread where only stack and instruction pointer are in a well-defined state.

Example:

```
L4UTIL_THREAD_FUNC(helper_thread) { l4_infinite_loop(); }
```

```
thread_cap->ex_regs((l4_umword_t)helper_thread, stack_addr);
```

Definition at line 71 of file [thread.h](#).

## 17.676 l4/vbus/vbus.h File Reference

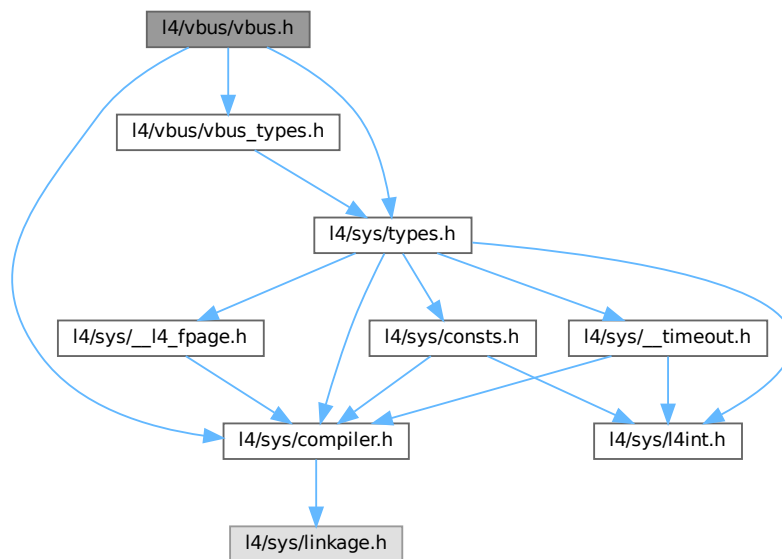

Description of the vbus C API.

```

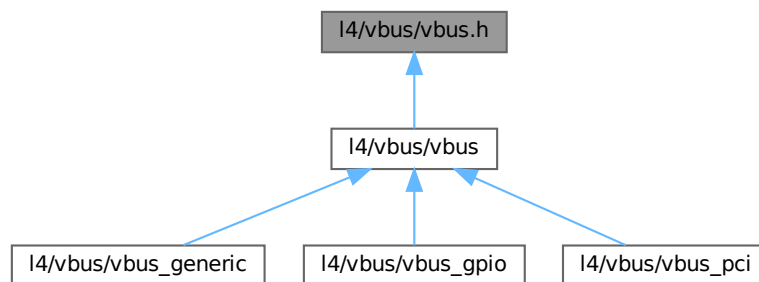

#include <l4/sys/compiler.h>
#include <l4/vbus/vbus_types.h>
#include <l4/sys/types.h>

```

Include dependency graph for vbus.h:

This graph shows which files directly or indirectly include this file:

## Enumerations

- enum { `L4VBUS_NULL` = -1L , `L4VBUS_ROOT_BUS` = 0 }
- Constants for device nodes.
- enum `l4vbus_icu_src_types` { `L4VBUS_ICU_SRC_DEV_HANDLE` = 1ULL << 63 }
- Flags that can be used with the ICU on a vbus device.
- enum `L4vbus_dma_domain_assign_flags` { `L4VBUS_DMAD_UNBIND` = 0 , `L4VBUS_DMAD_BIND` = 1 , `L4VBUS_DMAD_L4RE_DMA_SPACE` = 0 , `L4VBUS_DMAD_KERNEL_DMA_SPACE` = 2 }
- Flags for `l4vbus_assign_dma_domain()`.

## Functions

- `L4_BEGIN_DECLS` int `l4vbus_get_device_by_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` \*child, char const \*hid, int depth, `l4vbus_device_t` \*devinfo)
- Find a device by the hardware interface identifier (HID).
- int `l4vbus_get_next_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` \*child, int depth, `l4vbus_device_t` \*devinfo)
- Find next child following *child*.
- int `l4vbus_get_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4vbus_device_t` \*devinfo)
- Obtain detailed information about a Vbus device.
- int `l4vbus_get_resource` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, unsigned res\_idx, `l4vbus_resource_t` \*res)
- Obtain the resource description of an individual device resource.
- int `l4vbus_is_compatible` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char const \*cid)
- Check if the given device has a compatibility ID (CID) or HID that matches cid.
- int `l4vbus_get_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char \*hid, unsigned long max\_len)
- Get the HID (hardware identifier) of a device.
- int `l4vbus_get_adr` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4_uint32_t` \*adr)
- Get the bus-specific address of a device.
- int `l4vbus_request_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const \*res)
- Request an IO port resource.
- int `l4vbus_assign_dma_domain` (`l4_cap_idx_t` vbus, unsigned domain\_id, unsigned flags, `l4_cap_idx_t` dma\_space)
- Bind or unbind a kernel DMA space or a `L4Re::Dma_space` to a DMA domain.
- int `l4vbus_release_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const \*res)
- Release a previously requested IO port resource.
- int `l4vbus_vicu_get_cap` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` icu, `l4_cap_idx_t` cap)
- Get capability of ICU.

## 17.676.1 Detailed Description

Description of the vbus C API.

Definition in file [vbus.h](#).

## 17.676.2 Enumeration Type Documentation

### 17.676.2.1 anonymous enum

anonymous enum

Constants for device nodes.

#### Enumerator

|                 |                          |
|-----------------|--------------------------|
| L4VBUS_NULL     | NULL device.             |
| L4VBUS_ROOT_BUS | Root device on the vbus. |

Definition at line 20 of file [vbus.h](#).

### 17.676.2.2 l4vbus\_icu\_src\_types

enum [l4vbus\\_icu\\_src\\_types](#)

Flags that can be used with the ICU on a vbus device.

#### Enumerator

|                           |                                                                                                                                                                                                                                                   |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| L4VBUS_ICU_SRC_DEV_HANDLE | Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in <a href="#">l4_icu_msi_info()</a> to denote that the ICU should interpret the source ID as a device handle. |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 26 of file [vbus.h](#).

## 17.684 I4/vbus/vbus\_interfaces.h File Reference

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

```
#include <l4/sys/types.h>
```

Include dependency graph for vbus\_interfaces.h:

This graph shows which files directly or indirectly include this file:

## Typedefs

- typedef enum [l4vbus\\_iface\\_type\\_t](#) [l4vbus\\_iface\\_type\\_t](#)  
Different sub-interfaces a vbus device may support.

## Enumerations

- enum [l4vbus\\_iface\\_type\\_t](#) {  
[L4VBUS\\_INTERFACE\\_ICU](#) = 0 , [L4VBUS\\_INTERFACE\\_GPIO](#) , [L4VBUS\\_INTERFACE\\_PCI](#) , [L4VBUS\\_INTERFACE\\_PCIDEV](#) ,  
[L4VBUS\\_INTERFACE\\_PM](#) , [L4VBUS\\_INTERFACE\\_BUS](#) , [L4VBUS\\_INTERFACE\\_GENERIC](#) = 0x20 }  
Different sub-interfaces a vbus device may support.
- enum { [L4VBUS\\_IFACE\\_SHIFT](#) = 26 }

## Functions

- unsigned [l4vbus\\_subinterface](#) (unsigned opcode)  
Return the ID of the vbus sub-interface.
- unsigned [l4vbus\\_interface\\_opcode](#) (unsigned opcode)  
Return the function opcode within the sub-interface of the vbus command.
- int [l4vbus\\_subinterface\\_supported](#) ([l4\\_uint32\\_t](#) dev\_type, [l4vbus\\_iface\\_type\\_t](#) iface\_type)  
Check if a vbus device supports a given sub-interface.

### 17.684.1 Detailed Description

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

Definition in file [vbus\\_interfaces.h](#).

### 17.684.2 Typedef Documentation

#### 17.684.2.1 l4vbus\_iface\_type\_t

```
typedef enum l4vbus_iface_type_t l4vbus_iface_type_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see [L4VBUS\\_IFACE\\_SHIFT](#)). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

| L4VBUS_INTERFACE_BUS     | VBus.                      |
| L4VBUS_INTERFACE_GENERIC | No specific sub interface. |

Definition at line 29 of file [vbus\\_interfaces.h](#).

## 17.684.4 Function Documentation

### 17.684.4.1 l4vbus\_subinterface\_supported()

```
int l4vbus_subinterface_supported (
 l4_uint32_t dev_type,
 l4vbus_iface_type_t iface_type) [inline]
```

Check if a vbus device supports a given sub-interface.

#### Parameters

---

|                   |                                                              |
|-------------------|--------------------------------------------------------------|
| <i>dev_type</i>   | Device type as reported in <a href="#">l4vbus_device_t</a> . |
| <i>iface_type</i> | Sub-interface type to check for.                             |

## Returns

True if the device supports the sub-interface.

Definition at line 99 of file [vbus\\_interfaces.h](#).

References [L4\\_INLINE](#), and [L4VBUS\\_INTERFACE\\_GENERIC](#).

### 17.692.2.3 l4vbus\_resource\_type\_t

enum [l4vbus\\_resource\\_type\\_t](#)

Description of vbus resource types.

#### Enumerator

|                            |                               |
|----------------------------|-------------------------------|
| L4VBUS_RESOURCE_INVALID    | Invalid type.                 |
| L4VBUS_RESOURCE_IRQ        | Interrupt resource.           |
| L4VBUS_RESOURCE_MEM        | I/O memory resource.          |
| L4VBUS_RESOURCE_PORT       | I/O port resource (x86 only). |
| L4VBUS_RESOURCE_BUS        | Bus resource.                 |
| L4VBUS_RESOURCE_GPIO       | Gpio resource.                |
| L4VBUS_RESOURCE_DMA_DOMAIN | DMA domain.                   |
| L4VBUS_RESOURCE_MAX        | Maximum resource id.          |

## 17.697.1 Detailed Description

vCPU API

Definition in file [vcpu.h](#).

## 17.697.2 Function Documentation

### 17.697.2.1 l4\_vcpu\_check\_version()

```
int l4_vcpu_check_version (
 l4_vcpu_state_t const * vcpu) [inline]
```

Check if a vCPU state has the right version.

#### Parameters

---

|                   |                                         |
|-------------------|-----------------------------------------|
| <code>vcpu</code> | A pointer to an initialized vCPU state. |
|-------------------|-----------------------------------------|

### Return values

|   |                                                                                                          |
|---|----------------------------------------------------------------------------------------------------------|
| 1 | If the vCPU state has a matching version ID for the current vCPU user-level structures.                  |
| 0 | If the vCPU state has a different (incompatible) version ID than the current vCPU user-level structures. |

00021 * Some words about the sysenter entry frame: Since the sysenter instruction
00022 * automatically reloads the instruction pointer (eip) and the stack pointer
00023 * (esp) after kernel entry, we have to save both registers preliminary to
00024 * that instruction. We use ecx to store the user-level esp and save eip onto
00025 * the stack. The ecx register contains the IPC timeout and has to be saved
00026 * onto the stack, too. The ebp register is saved for compatibility reasons
00027 * with the Hazelnut kernel. Both the esp and the ss register are also pushed
00028 * onto the stack to be able to return using the "lret" instruction from the
00029 * sysexit trampoline page if Small Address Spaces are enabled.
